\$2.00

SPECIAL
CASINO GAMES!

CCA DATA MANAGEMENT SYSTEM

**PERSONAL
SOFTWARE**

- Complete, illustrated manual in a three ring binder
- Handles 1, 2, 3, or 4 disk drives
- Written in BASIC, with instructions for writing your own programs to use DMS files, including I/O routines.
- Create, add, update, or delete files easily.
- Search any field for any data.
- Sort by any field.
- Print reports, selecting any fields in any order, and maintain totals and subtotals on any numeric fields.
- Print mailing labels.
- Print records selectively, for example, only customers with New York addresses.
- Codes printed on screen refer you to manual for explanation at all times 1/2
- Complete index in manual.
- Scan function to report statistically on file. You might ask how many accounts are overdue and receive a report that stated 10 records found in 200 records scanned (5% of file).
- Automatically tests line printer ready state to avoid system lockup.
- Printer alignment pattern for labels.
- Warning issued if you try to compact data without creating a backup. (You can ignore warning).

Comes on cassette tape for \$74.95 (plus \$2 shipping)

APL is a powerful and elegant computer language, yet it is easy to learn. It is ideal for the engineer, scientist, mathematician, circuit designer, or for the person who just wants to learn a new language.

Due to the absence of the special character set for APL on the TRS-80*, APL 80 uses shifted letters, which are identified on the screen with a lighted graphics block before the letter. If you have a modified TRS-80 (Electric Pencil Modification), a lower case driver is included to display the shifted letters on the screen.

Special features of APL 80 include the ability to save and load workspace on disk, return to DOS for directory or commands without losing your workspace or variables, and send output to a line printer. Four workspaces are included with lessons on the use of APL operators, commands, and functions, with many examples.

All of this plus instruction manual and the book **APL: An Interactive Approach**, for only \$49.95 plus \$1.00 shipping. 32K, 1 disk required; 48K recommended.

Reduced featured, 16K Level II tape version, no lessons, no book, I/O capacity, \$14.95; with book, \$39.95 plus \$1.00 shipping.

APL An Interactive Approach, Separately, \$15.50 plus \$1.00 shipping.

**PROGRAMMERS ARE AVAILABLE ON THE HOTLINE,
TUESDAYS, 7-10 PM, EST: (603)673-5144**

SoftSide Magazine is continually seeking original articles and software for publication. Imagination and variety in concept and content are our primary criteria for acceptance. Payment varies with length, suitability, ease of editing and quality.

Our policies with respect to software purchase are highly individualized, and offer the programmer several options, including one-time publication rights, outright purchase, and royalties on sale of prerecorded cassettes. Program submissions should use Radio Shack Level II Basic, should run in Level II and Disk BASIC, and may not employ coding techniques that cannot be accurately presented in a line listing, such as SYSTEM modules and "super graphics" or other hybrid methods. For more information, please write: **SoftSide**, PO Box 68, Milford, NH 03055.

SoftSide is published monthly by SoftSide Publications, 6 South St., Milford, NH 03055. Subscription rates: USA bulk rate - \$18 per year. USA first class, APO, FPO, Canada, Mexico, overseas surface mail - \$25 per year. Overseas airmail - \$30 per year. All remittances must be in U.S. funds. Mail subscription inquiries to: **SoftSide Subscriptions**, PO Box 68, Milford, NH 03055. Entire contents copyright © 1979 by SoftSide Publications. All rights reserved.

PLEASE NOTE: TRS-80 is a registered trademark of Radio Shack, a division of Tandy Corporation. The Software Exchange is not connected in any way with Radio Shack or Tandy Corporation.

OUTGOING MAIL

I'd like to begin this month with a word of appreciation to **The Dunes Hotel and Country Club** for providing pictures for this issue, including our cover.

Gambling fever seems to have struck our magazine this month. Perhaps it is the aftereffects of the Las Vegas Consumer Electronics Show, or possibly the risky environment for microcomputer related businesses this year. Shakeouts are nothing new for the personal computer market, as we have seen even some of the leading companies of a few years ago go under. But momentous events are upon us.

One feature of the year is significant new computers. Your editor (and indeed not only most of the staff, but even former staff members) has fallen in love with a new machine, The **Atari 800**. (Yes, we do sell it! Ask **HardSide** about a trade in.) We expect to launch **SoftSide: Atari** this summer, and we are eagerly looking for programs. If you want to move up to high resolution graphics and color, investigate this computer. We saw a demonstration of a space game **Atari** is preparing that was so good I won't even try to describe it.

Another new computer scheduled for the immediate future is the **Video Genie**, the much rumored **TRZ-80** from Hong Kong with our own familiar Level II BASIC, TRS-80 compatible tapes, and even an S-100 backplane for expansion. We saw the prototype in Las Vegas and were suitably impressed.

Of course, we also have the persistent rumor of the TRS-80 color. As **Radio Shack** interviewed some of our programmers for sweet jobs at the Tandy Counter, they asked questions about programming experience with the 6502. My prediction is a lesser imitation of the **Atari** with a price of \$800 to be introduced in June at the New York show. This time they will probably have some good games at the time of introduction, as a color computer is more game oriented. I suspect that they will try to keep a compatible BASIC and cassette format. Since **Tandy** is a marketing company instead of a computer company, they could probably make a lot of money out of a pile of junk. But we will hope for good things.

One computer that seems out of the running is the **Texas Instruments 99/4**. It has the weakest graphics, the weakest BASIC, and the heftiest price in its category. Their eastern distributor came to the same conclusion and dropped the product to sell the **Atari**. With the 990 processor and products like the **Speak and Spell, T.I.** still has the ability to build a great computer, but I suspect they don't want any threats to their minicomputers.

Impressive printers are also appearing for the personal computer. **Hardside** will be selling the **Centronics 737** with nice print, lower case and proportional spacing for less than a thousand dollars, and the **Eaton LRC**, with plain paper, ordinary (cheap!) ribbons, and software selectable

20, 32, 40, and 64 characters per line and incredible durability for around \$400. In addition, **Radio Shack** demonstrated a nice, quiet daisy wheel printer at the San Francisco Computer Faire.

The Computer Faire was a good show this year, with SoftSide authors Scott Adams, Will Hagenbuch, Art Canfield, Harvard Pennington, Douglas Carlston, and others coming by the booth. We sold well over 1,000 SoftSides and close to 1,000 tapes at the Faire.

It was good to meet with the staff of other computer magazines. Byte, Creative Computing,

Compute, 80-US, The S-80 Bulletin, and Computronics were among the exhibitors. Apparently Microcomputing could not afford to exhibit, as Wayne Green's last industry newsletter complained of show losses. Roger and I had a delightful evening with Mike Schmidt and Terry Dettmann of 80-US.

That's probably enough comments to keep the mail coming in this month! We especially want to hear from people who have translated SoftSide programs for the **Atari**, **APPLE**, and other computers.

S-80 SPECIALIZED SOFTWARE SOURCES

A softside service for the personal computer market

Quite often we receive submissions that are not commercially marketable. For example, someone may have a useful program for rabbit breeding, but we do not have enough demand for it to justify the cost of reviewing, advertising, and publishing it. A medium is needed for the exchange of information on specialized programs.

Therefore we will maintain a catalog of sources for this software and publish it quarterly at a nominal cost. If you would like to list your software (FREE!), send this form to:

**S.S.S.S.
P.O. Box 68
Milford, NH 03055**

This is a medium for original authors only. Name and address of the programmer must appear in ad. We reserve the right to refuse any ad, and will publish only ads for non commercial practical applications. SoftSide does not review or warranty these programs in any way.

**SUBMISSION FORM:
PLEASE PUBLISH THE FOLLOWING AD IN S.S.S.S.:**

NAME _____
ADDRESS _____

I CERTIFY THAT I AM THE AUTHOR OF THE ABOVE PROGRAM.

Written by the author of your Level I Users Manual, **LEARNING LEVEL II** picks right up where the Level I Manual leaves off. It also supplies the changes needed to make the Level I Manual compatible with your Level II TRS-80.

LEARNING LEVEL II covers all Level II BASIC beyond Level I, plus much more. It shows you how to use the Editor, explains what the many error messages are really saying, and leads you thru conversions of Level I programs to Level II.

Dual cassettes, printers, the Expansion Interface with clock and other features are explained in the same easy-to-learn style that made the Level I Manual famous. **LEARNING LEVEL II** was created specifically for your Level II TRS-80!

Yes, I want to really learn how to use Level II!

Please send _____ copies of
LEARNING LEVEL II. My check for \$15.95 +
\$1.00 P & H is enclosed.

I understand my order will be shipped
promptly and there is a 30 day money-back
guarantee.

TRS-80 DISK AND OTHER MYSTERIES

by Harvard C. Pennington

If you are serious enough about disk programming to own RSM-2D or NEWDOS+, then you ought to purchase this book. It explains the organization and features of TRS-DOS 2.0, 2.1, 2.2, NEWDOS, and VTOS, tells you how to use Superzap, RSM-2D, Monitor 3, Debug, Dircheck, and LMOffset, explains the directory track on the disk, file structures (including Electric Pencil files), and even gives detailed procedures for recovery of lost data. While this book is not recommended for the inexperienced user, it is essential for the serious disk programmer. The book is expensive, in 8½ by 11 format with typewritten instead of typeset printing, and only 130 pages, yet the information is worth the price. \$22.50

plus \$1.00 shipping and handling.

LITTLE BOOK OF BASIC STYLE

John M. Nevison

Ideal reference for BASIC programmer,
junior high to research scientist. Indexed,
illustrated, 151 pages.

\$5.95 plus \$1.00 shipping and handling

TRS-80 ASSEMBLY LANGUAGE PROGRAMMING

William Barden, Jr.

Covers Z-80, an Introduction to Assembly Language, the Radio Shack Shack Editor/Assembler and T-Bug, and debugging methods; also explains how to move data, the use of arithmetic, compare, logic, and bit operations, shifts, strings, tables, input and output, and 12 commonly used subroutines. Well indexed and illustrated.

\$3.95 plus \$1.00 shipping and handling

TRS-80 INTERFACING

by Jonathan A. Titus.

This valuable reference book for the hardware enthusiast with an understanding of Assembly language programming includes the schematic, printed circuit board artwork, and instructions for building a TRS-80 breadboard, plus 18 experiments to give a solid understanding of interfacing to the TRS-80. \$8.95

plus \$1.00 for shipping and handling

Floppy Disk Diagnostic

by Dave Stambaugh

- 35 or 40 track in same program
- Tests controller functions and status bits
- Tests drive speed and allows adjustment
- Tests switches and mechanical components
- Verifies data transfer
- Tests drive seek function
- Sector and byte write and read tests using all possible patterns
- 16 to 48K, 1 to 4 disk drives
- Tests cross cylinder interference
- Tests drive-to-drive compatibility

The best and most complete diagnostic you can buy to verify disk drive reliability and find problems. Displays 19 error messages and cross references them to 14 possible causes. Continuous test option for exhaustive testing keeps statistical record of all errors found.

Supplied on diskette with manual for only \$24.95.

The Software Exchange

6 South Street, Box 68, Milford, NH 03055 603-673-5144

Solitaire simulates a familiar peg puzzle called Hi-Q. The object is to remove as many pegs as possible by jumping horizontally or vertically over a peg, into a vacant hole, removing the jumped peg in the process.

Proficient players will leave only one piece. Very proficient players will leave only one piece, in the center hole. Real hotshots will "mark" a piece at the beginning of the game, and end with that piece alone in the center hole.

Adding to the excitement are the famous James Garon sound effects!

TAKE A PART

Solitaire

by James Garon

Those four funny symbols in line 160 are supposed to be the four arrows. Most printers cannot print arrows but instead will substitute the symbols you see. That explains what you see, but that's not the problem. The problem is that three of the arrows cannot be typed from the keyboard! So HOW and WHY did I write the line that way???

To answer the WHY first, I am a compulsive "byte-miser". I resent having to use the five byte "CHR\$(92)" when it is possible to have a one-byte "↓"!

Now for the HOW. Begin typing the line. When you get to the place where the arrows go, do the following:

- 1)With your left hand, hold down both the I and the Y keys.
- 2)With your right hand, one at a time, (and still holding down I and Y) press K, L, M and then N. In addition to the K, L, M & N, you will get the arrows!
- 3)ENTER the line, EDIT out the unwanted letters, but leave the arrows; then
- 4)Finish typing the line.

By the way, you might someday have a use for the result of following step 1 above, while you press the letter "O" . . .

Remember the Good Old Days? . . .
You can recapture them!

Level I in Level II

by APPARAT

Level I BASIC interpreter loads in top 4K of any 16K Level II TRS-80. Allows unmodified load, run, and CSAVE of Level I programs — no conversion hassles! Great for teaching beginners, young and old, to program in BASIC.

“System” tape for Level II, 16K — \$15.00

The Software Exchange

6 South Street, Box 68, Milford, NH 03055 603-673-5144

THE AUTOMATED DISKETTE DIRECTORY

by George Blank

All you do is insert the diskette in the drive and type the name or number you use for that diskette. The program automatically reads the directory of the diskette, ignoring invisible files like BASIC/CMD and normal DOS files like DISKDUMP/BAS, and stores it in a disk file.

DISPLAY OPTIONS INCLUDE:

- Printout to screen or line printer
- Alphabetic sort
- Search for single program using INSTR
(A search for TRE would find STARTREK and TREES)
- Index to a single disk
- Search and RUN program

\$14.95
BASIC
cassette

Three programs with instructions for loading on a NEWDOS diskette and instruction manual.

IMPORTANT: This program requires the following minimum system:

At least **TWO** disk drives
32K of memory

NEWDOS by Apparat (Uses CMD: "DIR" and OPEN: "E")

**This Could Be The Handiest
Program You Own! By Ken Knecht**

Dynamic Data Base

A data base manager is a general purpose file management program that can be set up for different uses. This could be the handiest program you own!

You specify the number of items in the file, whether they are numerical or alphanumeric and how long each item is, and the program creates the file, receives your data, sorts it, searches for information, stores and retrieves from disk, and will even perform arithmetic with data items.

Very easy to learn and use, yet you can use it for mailing lists, hobby collectons, inventory, appointments, accounting, work organizing, radio logbook, billing records, telephone numbers, or a thousand other uses!

Manual and 3 programs in basic on disk for 32K or large systems with one or more drives **only \$39.95**

TSE The Software Exchange
6 South Street, Box 68, Milford, NH 03055 603-673-5144

PENCIL/PAL

by Microcomputer Specialists
Form letter generator for use with the Electric Pencil by Michael Schraye. You can use a mailing list maintained as a PENCIL file, print letters selectively using selection codes, use custom greetings for each account, and print labels. Requires 32K 1 Disk System, Electric Pencil, and lower case modification kit. (Program 121 lines 5600 Bytes) **\$35.**

TSE The Software Exchange
6 South Street, Box 68, Milford, NH 03055 603-673-5144

HOPE IT DOESN'T WORK!

by Ron Potkin

You have just spent four hours typing in a program from "SoftSide", you have SAVED it, and now, in exhausted anticipation, you type RUN... Ah, well; you didn't really expect it to work first time, did you? It's funny but very few people can expect to type a thousand characters or more without making several errors.

But really, if you are an amateur programmer and keen to learn all you can about your TRS-80*, then your motto should be "HOPE IT DOESN'T WORK". You may find it frustrating, but you can learn a great deal from programs written by other people. This is particularly true if you are compelled to examine the various routines closely in order to remove a typing bug.

I can promise you that the time will be well spent. You will discover ways to make your own programs more efficient and learn how to save some of that precious memory space. Many of us tend to use a subset of the instructions available to us. Here is a way to help us get a better command of the language.

These are a few of the things I have learned by studying various programs; usually forced on me because they didn't work properly first time:

(1) It does not appear to be necessary to use the semi-colon when using TAB or CHR\$ in a

PRINT statement, e.g.

```
PRINTCHR$(134)CHR$(65)
      CHR$(173)
```

(2) Put routines that are used often at the beginning of the program. The computer searches for line numbers starting from the beginning.

(3) Don't use PRINT STRING\$(64,"") to clear a line. Use PRINTCHR\$(38) instead. We tend to overlook the control characters but they are fast and save space.

(4) Dealing a pack of cards. I think this is a very clever routine. I know I would never have thought of it myself:

```
DIM(52)
FORI=1TO52
C(I)=I:NEXT
FORI=1TO52
A=RND(I):B=C(I)
C(I)=C(A):C(A)=B:NEXT
```

It is very simple but very efficient.

(5) Boolean logic is sometimes easier to read and more direct than "IF" or "ON...GOTO" statements e.g.

```
A=20*(B=1)-37*(B=2)-77*(B=3)
```

If B is not equal to 1, 2 or 3 then A equals zero.

(6) Alternatively, you can sometimes avoid complicated calculations by setting up a matrix of common values when initializing the program. Suppose you wish to access a print position according to the value of a variable B; then use

POSITION=MATRIX(B)

This will speed up your graphics.

(7) Did you know that MEMORY SIZE is obtained by

PEEK(16598)+PEEK
(16599*256+2

This means that you can check it to ensure the User has left you sufficient room for any machine language routines. Better still, the size need not be precise. Provided it is enough for both BASIC and machine language, it can be any number, and you can enter your routine into MEMORY SIZE+1

using POKE, PEEK and VARPTR.

(8) The STEP function has more uses than you may realize. Suppose you wish to draw two lines one at X=10, Y=5 and one at X=10, y=29. Use:

X=10:FOR Y=5 TO 29 STEP 24.....

NEXT

There are many others. One last point: read your LEVEL II manual regularly. It is surprising how much one forgets. Have you ever seen a program using POS(0)? Perhaps everybody has forgotten that one.

PROGRAMMING HINT

To reset the line counter on your printer so it can count pages correctly on a new listing, use POKE 16425,1.

To change the number of lines per page, add 1 to the number and POKE it into Location 16424.

NEW!

END ZONE II

by Roger W. Robitaille, Sr.

Rough and tumble gridiron action, from the toss of the coin to the 2-minute warning...four 15-minute quarters, provisions for interceptions, touchbacks, time-outs, fumbles, penalties. Everything except the cheerleaders.

Level II, 16K
Price, \$9.95

TSE

The Software Exchange

6 South Street, Box 68, Milford, NH 03055 603-673-5144

In the beginning there was Level I
THEN THERE WAS LEVEL II
NOW - LEVEL III BASIC

Open the manual and load the cassette. Then get ready to work with the most powerful Basic interpreter you've ever had your hands on . . . Level III Basic for Radio Shack Computers. It loads right on top of the Level II ROM, and in just 5K of space, opens up your capability to new dimensions. For starters, this new cassette-based interpreter gives you most of the commands usually found only in disk BASIC. Plus graphics commands. Plus Powerful editing commands. Plus long error messages, hex and octal constants and conversions, user defined functions and a number of commands never before available on either cassette or disk interpreters.

**Now do more than
ever before**
**With the most
powerful cassette
Basic you can buy**
For the TRS-80

- EASIER LOADING, FEWER KEYBOARD ERRORS
- BASIC ACCESS TO RS-232
- EASIER AND MORE POWERFUL GRAPHICS
- 10 USR CALLS
- ERROR MESSAGES
- TIMES
- TIMED INKEY
- RENUMBER
- ONLY MICROSOFT COULD DO IT.

Level III Basic was created by Microsoft, the same company that wrote Level II Basic for Radio Shack. And It actually uses Level II as a foundation for this enhanced add-on.

● **AVAILABLE NOW FOR ONLY \$49.95.** You get the power that might otherwise cost you hundreds of dollars in additional equipment for only \$49.95. Price includes the Users Manual, a Quick Reference Card, and a preprogrammed cassette tape.

TSE

KVP

Keyboard, Video, and Printer Enhancements by Lance Micklus

- ★ 900 byte machine language program allows you to use a serial printer with the TRS-80. You may specify acceptance of linefeeds, lines per page, characters per line, and printer handshake.
- ★ If you have the Radio Shack™, Electric Pencil™, or one of the other published lower case hardware conversions installed in your keyboard unit, KVP contains the software driver routines to enable the conversion.
- ★ Includes adjustable keyboard debounce routine. Another feature is direct entry of graphic and control characters from the keyboard.

Requires 16K Level II or Disk Basic.
On cassette \$24.95 Diskette \$29.95.

KVP 232, a special version for the small systems hardware TRS-232 interface, is available upon request at the same prices.

ICBM by Rod Fitzgerald

RED ALERT! You are the radar controller at a surface-to-air (SAM) missile installation guarding Strategic Area Command Area Headquarters. You have just picked up a Russian ICBM heading your way! The alarms are screaming and as the jets scramble, you must launch a surface-to-air missile to intercept and destroy the ICBM.

You control the SAM's direction of travel by the inputting of the proper compass bearing. With each new radar scan you are advised of the new positions of the ICBM and the SAM, and as the distance narrows, you make the necessary adjustments in direction so as to intercept the ICBM.

You may destroy the ICBM by coming within 1.5 miles of it, at which point the SAM's on-board computers will direct it to its target. If you overshoot the ICBM, you can turn the SAM around and chase the ICBM back towards your base. In the unlikely event the ICBM survives the detonation of the first SAM, you can launch another. But, you MUST succeed! Good Luck!

The ST-80 family of smart terminal packages

Now you can have the right terminal package for your communication needs! From ST-80 UC — the simple, pre-set, inexpensive terminal program designed for users of THE SOURCE, MICRONET, and FORUM 80 — to the power and sophistication of ST-80 III, The Software Exchange has the package for you.

All four programs include the ability to use an unmodified TRS-80 keyboard to produce RUB, ESC, and other control characters for time sharing, software control of the RS-232-C board, repeat key, bell, software support for the three most common upper/lower case hardware conversions, and line printer output.

ST-80 UC 4K Level II cassette, \$24.95

This universal communicator program is an easy-to-use timesharing program for the beginner. Special features include preset parity, word length, and baud rate (regardless of switch settings on the RS-232-C board) for THE SOURCE, MICRONET, and FORUM 80, automatic testing of the RS-232-C board, and even spooling of prepared messages on tape directly into FORUM 80 using a basic program supplied as a line listing.

ST-80 4K Level II cassette \$49.95

The original smart terminal program for the TRS-80, ST-80 lets you reprogram your RS-232-C board from the keyboard, and run at different baud rates. Does not have auto testing of RS-232-C or tape spooling.

ST-80 D 32K disk program, \$79.95

Special features include connection time clock, option of user-created translation tables for keyboard, gathering and pre-formatting data to be sent directly from disk to host computer, spooling of received files to disk or printer, editing of received files, and auto logon. If you use it with VTOS 3.1, you also get device driven I/O, job logging, and chaining.

ST-80 III 32K disk program, \$150.00

ST-80 D with extra utility programs

ROOTS

ME!

32K, disk
... **\$19.95**

Genealogy has become an enormously popular pastime (as well as a lucrative profession for some) in the last few years.

The fascination is endless. Once you've come across your first amazing revelation — that you have a colorful ancestor who was a famous Indian Chief, or an advisor to an English King, or what-have-you — you're hooked, my friend, and as these people who were your progenitors come alive for you, like characters in a play, so does history itself light up like a stage.

ROOTS is an indispensable aid for all genealogists, whether amateur or professional. Up to nine generations of data may be placed into memory per file. Allows display of known data concerning a given individual; display of four-generation pedigree; searches for specific information within a given category (finds all "Smith" last names, or all births in the 1890's, for example); sorts by any selected category; gives printed reports.

The Software Exchange

6 South Street, Box 68, Milford, NH 03055 603-673-5144

Dug Report

The instructions for OIL BARON in the December '79 issue were incomplete. The following criteria must be met in order to become an Oil Baron:

- 1) Cash reserves of at least \$10,000,000
- 2) At least 31 refinery units
- 3) At least 20 Class "B" stations
- 4) At least 15 Class "A" stations
- 5) At least \$150,000 spent on foreign lobby
- 6) At least \$75,000 spent on domestic lobby
- 7) A crude to refined gas percentage of at least 90%.
- 8) At least 80% of your refinery units must have smog equipment in good working order
- 9) AT least 20 domestic oil wells.

(These are the MINIMUM requirements and do not guarantee a win. Aim for at least 50% above what is listed, to be safe.)

X-WING II

by Chris Freund

For the thousands who have enjoyed X-Wing Fighter, X-Wing II presents a totally new element in the game!

You are Pilot of an X-Wing fighter ...

Your Mission, Destroy the Death Star!

Where X-Wing I left Death Star looming on the screen, **X-Wing II** lets you guide your fighter into the trench, find the exhaust port, aim and fire — all the while avoiding enemy fighters. Excellent graphics, 12 levels of play, and extensive INKEYS commands make this one of our most exciting "real-time" games.

Level II, 16K — \$9.95

The Software Exchange

6 South Street, Box 68, Milford, NH 03055 603-673-5144

TYPING TUTOR

by
Roy Groth

You probably have often thought that it would be a lot easier if you didn't have to "hunt and peck" at the typewriter or computer keyboard. If you could only double your typing speed, the job would be done in half the time! And, with increased speed and confidence comes increased accuracy.

Level II, 16K — \$19.95

Typing Tutor is a set of programs designed to teach you touch typing — from the basics of learning where the keys are, to practice drills at speeds that would make a Selectric shudder! Each lesson is displayed on the screen, including, at the early stages, a keyboard diagram. You are quizzed and graded, and you progress at your own pace. When you have mastered a lesson, the computer advances to the next, using CAI (computer aided instruction). Progress is fast, painless, and even fun as you keep pushing to break your own record.

So, whether you're going back to school or just want to enter programs from **SoftSide** that much faster, **Typing Tutor** can help.

Order a copy today and be a better typist by next week.

PROGRAMMING MADE EASY IN 580 BYTES

A Product Review by Sherry M. Taylor

What's worth its weight in gold, resides in 850 bytes of low memory, and is God's gift to Level II programmers? Well, if God is Web Associates, the gift is T-SHORT: a neat little package that takes the hard work out of copying SOFTSIDE programs.

T-SHORT gives the Level II TRS-80 shorthand capabilities. It works on the assumption that you have not made an upper/lower case modification or can switch it off at will. With T-SHORT loaded, a single shifted key will print on the screen an entire word or expression. It virtually eliminates syntax errors caused by misspelling or omitted parentheses.

Even if you are a bad typist, this program could save up to 50% of your programming time that could be better used developing your

program idea or debugging same. You will find however, that with fewer mistakes in often used commands and statements, you will even spend less time debugging a program. (Of course, if your favorite game is DEBUGGING III.6, you may not want fewer mistakes.)

A very useful feature is the KUSTOM key. The KUSTOM key is user programmed to do anything your heart desires. It can be changed at any time, so if your heart's desire changes a lot, there's no real problem. I usually use the KUSTOM key for the PRINT statement. Since I get most of my programs from SOFTSIDE line listings, I like the PRINT statement spelled out to match the spacing as it is given in the listing. Another good idea is to program a self-entering RUN command for

use while debugging. Or, if working on a troublesome section, a GOTO ### might be in order. (There is already a provision for a GOTO 10 command.)

You will find this program especially useful in the case of graphics strings. The old `M$=CHR$(###)+CHR$(###)+` etc. type of programming is unnerving if you forget the ASCII code number before you can get all that preceding stuff typed. There are two ways to get around this with T-SHORT. One is to program KUSTOM to print an entire line such as this: `CHR$(nnn)+CHR$(nnn)+CHR$(nnn)`. Then go back and edit in the numbers. Since the graphics strings are usually programmed together in the utilities section, you can change your KUSTOM key when you've finished and let it do something else. If you need only a few of those CHR\$'s throughout the program, the second way is to use the shifted "C" to print the entire expression "CHR\$(" . Now all you have to remember is the ASCII code and the closing parenthesis.

There are 42 keys that will have a special shifted function with T-SHORT. So for those of us who have memories even more static than TRS-80's RAM, the program is supplied with decals to install on the keys indicating what the shifted version will produce. They are designed with white printing on clear plastic to give the nice, expensive "factory" look.

The program is provided on digital cassette with Level II on one side and DOS on the other. There are two passes of each. Included are 4 pages of detailed instructions. The genius responsible for T-SHORT is Ron Wirth and it is produced by Web Associates. It is available through The Software Exchange for \$9.95.

As far as I am concerned, no Level II TRS-80 should be without this program. I've often wondered how I lived so long without it. And, for those who don't need the other features of Level III*, T-SHORT is the only way to go.

A REVIEW OF WORD CHALLENGE

by Scott Adams

Word Challenge written by Richard Taylor and published by 80-US is a software sleeper which has too long lain on the shelf. It is a fun-filled, lyrical game which is very, very addicting!

Challenge is written in BASIC and pokes its own machine language routines as needed. It will run as easily on disk as on a 16K Level III. The program first

starts off with a very clever sight and sound sequence which is reminiscent of the newer electronic pinball machines found in todays modern arcades. It then allows you to select either the one or two player option.

The basic rules to Challenge are simple, the player must guess a hidden phrase one letter at a time. The value of the phrase starts at 50

points. For each incorrect consonant guessed 2 points are deducted and for each wrong vowel 10 points are knocked off! The phrases may be supplied by the computer or in the case of two players, by each of the opponents.

Richard Taylor (who is well known for his TRS-80 Opera selections) has outdone himself in both sound and sight simulations. Besides being fun to play this

program is also fun to watch! Unlike other word games this one is easy to learn and simple to play! Here at Adventure Computer Center we find this program is an instant crowd attractor.

Word Challenge is destined to become a true classic, and is one program I can readily recommend for all age groups from 9 to 90! But don't take my word for it, go out and buy yourself a copy today! (And have an "Adventure" with it!)

To order from The Software Exchange see advertisement this page...

Richard Taylor's Magical Sound TRS-80 Opera Theatre

The finest musical program we have seen for the TRS-80. It deserves a quality amplifier. Amazing sound! Richard Taylor is an opera singer with a magnificent ear!

Selections:

- WILLIAM TELL OVERTURE ● MUSETTA'S WALTZ
- SEMPRE LIBERA ● QUEEN OF THE NIGHT
- LA DONNA E' MOBILE

Challenge

"Didn't want to stop — nearly died laughing" - Scott Adams

Word guessing game with sound effects, one or two players. Truly challenging and competitive.

Separately on cassette \$9.95 (each program)
Both programs on disk \$19.95 (two programs)

T-SHORT™

SHORTHAND for LEVEL II and DISK BASIC

- * TSHORT™ lets you type LEVEL II and/or DISK BASIC more quickly and accurately than ever before. Save up to 90% programming time and achieve 100% accuracy.
- * 31 programming statement keys.
- * KUSTOM™ key, up to 64 characters - changeable anytime.
- * 42 key decals (see picture). 10 area different for DISK users.
- * A single, shifted-key entry types entire statement on screen.
- * Fast, efficient machine language.
- * Uses 580 bytes of LOW memory, i.e.: No MEM SIZE req'd.
- * Comes on cassettes, one side LEVEL II, the other for DOS.
- * Compatible with DOS 2.1, 2.2, 2.3, NEWDOS, KBFIX, etc.
- * DOS version loads to and executes from disk via TAPEDISK.
- * Features self-entering commands: CONT; GOTO10; KUSTOM™ (Self-enter optional)
- * TSHORT™ W/4 page instruction manual **\$9.95**

Outstanding Utilities from RACET Computes

INFINITE BASIC

Adds more than 70 commands to BASIC that can be merged in any combination to make efficient use of memory. Includes matrix read, inverse, transpose, identity, simultaneous equations, scalar, vector, and multidimensional array arithmetic, dynamically reshape, expand, and delete arrays, change arrays in mid program, read and write arrays on tape, copy elements, zero and move arrays. String functions include left and right justify, truncate, rotate, text justification, string centering, delete and insert substring, pack string, convert upper and lower case, translate characters, reverse strings, verify function, test number of occurrences, masked string searches, encrypt and decrypt string, compress and uncompress string characters. High speed sort routines for strings and arrays, including multikey sorts, are also part of this package.

For business users, an add on package includes multiple precision packed decimal arithmetic, with up to 127 digits of accuracy, binary search of sorted arrays, insert elements in sorted arrays, automatic page headings, footings, and pagination including forced end of page, and automatic hash for record retrieval. **Infinite BASIC \$49.95. Infinite business (add on) \$29.95**

COMPROC COMMAND PROCESSOR

Chain multiple steps in disk BASIC upon power up, relocatable key debounce, allows pauses for data entry at specified steps during execution (on cassette for disk systems only) for **\$19.95**.

DOSORT

BASIC control program with high speed machine language sort for disk users. Merge and sort files on more than one disk if you have 2 or more drives. Self prompting with manual. Specify 32K or 48K version **\$34.95**.

GSF GENERALIZED SUBROUTINE FACILITY

18 machine language subroutines with easy access for BASIC users. Sort 1000 element arrays in 9 seconds, read and write arrays to tape, compress and uncompress data, move arrays in memory, duplicate memory, fast horizontal and vertical lines, 5 routines for screen control. Specify 16K, 32K, or 48K version, for **\$24.95**.

REMODEL PROLOAD

BASIC program utility allows you to renumber portions of a program, move portions from one location to another, delete, merge, save and verify combined and changed programs, and create your own library of programs, subroutines, and even data statements. Works on tape or disk systems. Two programs on one tape. Specify 16K, 32K, or 48K (unspecified orders receive 16K) tape **\$34.95**

TIMSER

Time series analysis program fits data to 9 different 1st, 2nd, and 3rd order curves. Goodness of fit data, tables, projected data, confidence limits, curve fit, variance, correction factor, seasonal and cyclical variations, inflation corrections are all implemented. Detailed user manual with illustrated examples. Order tape at \$14.95.

Y-YBAR

Optical system design program allows manipulation of ray heights at lens surfaces using Y-Y Bar diagram method. With documentation on tape for \$14.95.

DISK SORT/MERGE

DSM IS POWERFUL!!!!!!

- Sorts large multiple diskette files on a minimum two drive Mod-I disk system.
- All records are physically rearranged — no key files are required.
- Sorts random files created by BASIC, including files containing sub-records spanning sectors.
- Sorts on one or more fields in ascending or descending order. Fields may be character, binary integer, or floating point.
- The sorted output file may optionally have fields deleted, rearranged, or padded.
- Sort commands can be saved for reuse in production applications.
- Single sort, merge, or mixed sort/merge operations may be performed in a single DSM application.
- Sorted output may be written to a new file, or replace the original input file.

DSM IS FAST!!!!

DSM is written entirely in machine language for fast sorting. \$75.00

SLOT MACHINE

by James A. Hagani

At the machine next to you is a little old lady in red tennis shoes, dropping one silver dollar after another into her machine. Each time she pulls the handle, 15 more silver dollars come cascading out and right into a bulging paper bag.

Tentatively, you turn to your own one-armed-bandit and drop the first silver dollar in the slot. You pull the lever—the wheels spin—

and you get: a Lemon, an Orange and a Prune.

6 hours, \$493.00 and 986 prunes later, you decide to give up. You mutter angrily, "There's got to be an easier way to make a living!"

"There is", says the little old lady as you pass by. "Do what I do. Get a job working for the management of this casino. You get to stand in front of one of these 'special'

machines and encourage the genuine customers by winning all day long! Well, sonny, it's time for my nap.", and she moves slowly off, down the rows of shiny slot machines.

You look around. Has anyone heard? Did anyone see? It appears safe. You sidle up to her "special" machine, and slip in one of your

last remaining silver dollars. As the wheels come to rest, you wait expectantly for your first payoff. What you see are: an Orange, a Potato and another Prune.

The little old lady calls back over her shoulder, "By the way, sonny, when you work for them, they even give you "special" silver dollars to feed the "special" machines!"

It is 2 a.m. in the smoke-filled room. The Cincinnati Kid has an Ace in the hole — an Ace and 2 Kings showing. Louisville Lucky has a Seven in the hole and another Seven showing. The Kid speaks softly but with an

undercurrent of confidence in his voice, "I'll see your \$50.00 and raise you \$100.00".

Lucky is down to his last \$50.00 chip. He tosses it into the pot. "I paid \$70.00 for my horse, 'Old Saddlebags'", he says. "You win this hand, Kid, and she's yours."

"You'll be walking home tonight, Lucky", the Kid murmurs as he reaches for the fateful card...

DRAW POKER

by Lee Blumenthal
and Joel Williard

The cute chorus girl by his side had been bringing him luck all evening. He felt sure that the combination of his skill and her lucky brown eyes was responsible for the sizable pile of chips before him on the green table. All he needed was to win one more big pot and he could buy that farm he

had always wanted. He could settle down there — maybe with this very girl — and never touch a deck of cards again.

He looked at his hand: the Ace, King, Jack and Ten of Hearts, and the Three of Clubs.

He looked at the brown-eyed girl, and the smile she gave him.

was all he needed. He threw down the Three, turned to the dealer and said, "I'll just take one".

The new card slid silently across the table. He picked it up but did not look at it yet. Instead, he turned to the brown-eyed girl and

asked, "So what's your name, honey?".

"Queenie Hart", she replied with a loving look.

With difficulty, he tore his gaze from her eyes and looked at his hand...

16K, 32K, and 48K versions on one cassette for \$24.95
(Use from tape in Level II or as a command file from Disk)

The Software Exchange

6 South Street, Box 68, Milford, NH 03055 603-673-5144

ADVENTURE

Get the granddaddy of the Adventure Games!

From MicroSoft, the people who wrote BASIC for all the personal computers, comes a version of the original Adventure. NOW, you no longer need a PDP-10 for all the power of the original game!

This game fills an entire diskette. Endless variety and challenge as you seek to rise to the level of Grand Master (until you gain skill, there are whole areas of the cave that you cannot enter.)

Requires 32K One Disk ONLY \$29.95!

The Software Exchange

6 South Street, Box 68, Millford, NH 03055 603-673-5144

ADVENTURES

by Scott Adams

Adventures on Tape: *Level II, 16K*

Adventure Sampler

Short version of Adventureland, a great way to try out adventuring (but you'll get addicted!) \$5.95

Adventureland

An enchanted world with 13 lost treasures guarded by magical beings. \$14.95

Pirate's Cove

Clues in blood-soaked books, a pirate and his parrot, alligators, treasure. \$14.95

Mission Impossible

A chance to prevent the nuclear reactor from being destroyed by a saboteur's time bomb \$14.95

The Count

Watch out! you're in Dracula's castle and you must destroy him before he bites you! \$14.95

Voodoo Castle

Remove a curse from Count Christo \$14.95

Strange Odyssey

Adventure in outer space in the ruins of an ancient alien civilization. \$14.95

Mystery Fun House

It will take all your ingenuity just to get past the ticket counter, and that's only the beginning! \$14.95

Pyramid of Doom

In the shifting sands of the Sahara lies an ancient Pyramid, filled with Egyptian treasures \$14.95

Adventures on Disk, in Sets:

Set 1: Mission Impossible, Pirate's Cove, Adventureland \$39.95

Set 2: Voodoo Castle, The Count, Strange Odyssey \$39.95

The Software Exchange

6 South Street, Box 68, Milford, NH 03055 603-673-5144

THE BASIC HANDBOOK

Dr. David A. Lien

A definitive reference/idea book. Explains over 50 favorite versions of the BASIC language in detail as used in micros, minis and mainframes. Everything you need to know about the most important statements, functions, operators and commands. From the same author as the **TRS-80 Users/Learners Manual**.

360 pages \$14.95 plus \$1.00 shipping and handling

LITTLE BOOK OF BASIC STYLE

John M. Nevison

Ideal reference for BASIC programmer, junior high to research scientist. Indexed, illustrated, 151 pages.

\$5.95

plus \$1.00 shipping and handling

GALACTIC EMPIRE

Build an empire that spans the Universe! Deploy mighty armies, conscript soldiers on strange planets, send forth starfleets of warships and transports, set tax levels, plan the use of resources, dispatch intelligence missions . . . Conquest of all the known inhabited worlds is your goal!

If you're already a GALACTIC EMPIRE fan, you absolutely MUST have

GALACTIC TRADER

Peace has finally come to the Galactic system, united into a single federation. Though you no longer command Galactica's imperial forces, you still have the vision and ambition to exploit new opportunities in trade. With two loyal comrades (Kirman and Computer Central) you set out to make a fortune. You must outwit the clever locals at the ancient game of barter, contend with the fuel cartel, watch out for spies from the large trading firms, and call upon all your experience in traversing space, including the use of suspended animation.

TIRED OF DISK ERRORS?

STOP BLAMING YOUR DRIVES — FIX YOUR DOS!

NEWDOS, by Apparat, is the third generation disk operating system for your TRS-80. NEWDOS corrects over 70 errors and omissions in TRSDOS 2.1 and disk BASIC, yet the two are completely compatible! Programs and files saved under one can be used with the other interchangeably. Going from TRSDOS to NEWDOS is like going from Level I to Level II: more power, more convenience, greater speed.

NEWDOS

- Use all DOS commands (incl. directory) in BASIC. Automatically load and run a BASIC program on power-up
- Produce variable cross-reference tables
- Open 'E' to add to sequential files
- Append files
- Use your line printer as a screen printer
- Renumber BASIC programs
- End keyboard bounce

NEWDOS+

- Editor/Assembler for disk
- Disassembler (Z80 machine code)
- LM Offset—allows transfer of any system tape to a disk file (automatically relocated)
- BASIC1—Level one BASIC saved on disk
- LV1DSKSL - not a typo, this saves and loads BASIC1 programs to disk
- DIRCHECK—tests and lists disk directory
- SUPERZAP—display/print/modify any location in memory or on disk

And, best of all, say goodbye to system crashes, lost data and wasted time caused by your old, bug-ridden system software.

Apparat's NEWDOS is fully documented and available for only \$49.95. **NEWDOS + , Just \$99.95**

Use of this software may require documentation available only with the purchase of Radio Shack TRSDOS and/or the Radio Shack Editor/Assembler.

PERIODICAL CROSS REFERENCE

by Dave Stambaugh

YOU DON'T HAVE TO BE A LIBRARIAN

Every professional or serious hobbyist who relies on current literature to update his/her knowledge can benefit from this program. Build a file using any subjects or publications you like (18 per file). Allows you to add, delete, edit; search by subject or publication; list on CRT or line printer **all** or selected entries. SAVE, LOAD with both tape and disk versions.

- ★Catalog and classify your library of computer (or other) magazines by individual articles under subject, publication, date, page, and title
- ★List entries by subject or publication to CRT or printer
- ★Maintain data files on cassette or disk (2 versions available)
- ★Edit, delete, add entries at any time
- ★Includes complete instructions

Cassette version: Level II, 16K 14.95
Disk Version: Single disk, 32K 19.95
(Minimum configurations)

PROGRAMMING HINTS

To perform a "cold start" of the TRS-80, it is not necessary to switch off and then on again. It can be performed with a SYSTEM command, followed by /0 to enter at address 0.

If you don't have an assembler, you may have to resort to the POKE statement in BASIC to enter short routines in machine language. The procedure can be tedious since POKE requires the operands in decimal while machine code is usually written in hexadecimal. The conversion is, however, very easy to perform in BASIC, allowing easy entry of machine code. The following lines can be used:

```
10 CLEAR 100:DEFINT D, I, V:DEFSTR A, H
20 READ A: IF A="END" THEN END ELSE P=0
30 FOR I=1 TO 4:GOSUB 100:P=P*16+D:NEXT
40 I=1:READ A
50 GOSUB 100:IF H <>" " THEN V=D*16:I=I+1:
   GOSUB 100:V=V+D:POKE P, V:P=P+1
60 I=I+1:IF I < LEN(A) THEN 50 ELSE 20
100 H=MID$(A, I, 1):D=ASC(H)-48+7*(H>"9")
110 RETURN
```

The machine code is then entered as a series of DATA statements, with the address followed by the instructions — with spaces allowed to separate the bytes. For example:

```
200 DATA 408E,007F
210 DATA 7F00,2A2040,DA9A04 DD7E05 B7 2801 77 79 FE20 DA0605
C37D04
220 DATA END
```

This is much easier to enter and to read than the corresponding decimal values.

As can be seen from the above (Line 100), conditional expressions can be used in calculations. If True, the value -1 will be returned, else 0. This can also be used, for example, to convert values between 0 and 15 to hexadecimal. The expression `ASC(H)-48+7*(H>"9")` will perform the conversion on the decimal value D. Locations in memory can thus easily be displayed in hexadecimal form.

For short, one-time assembler language routines, the end of the I/O area (16870 to 17126) can be used. This area is used for LIST, EDIT, keyboard entry and cassette I/O, so be careful with this if any of these are used. I have found it useful for one-time routines such as initialization of addresses etc, especially if you tend to forget to answer the MEMORY SIZE question on power up.

ON ERROR GOTO

When you have an error trapping routine for a particular section of the program, and you don't want an error in the rest of the program to send you to that location, you can turn off the ON

ERROR GOTO function with ON ERROR GOTO 0. Assuming that you do not have a line zero, this will return you to normal error messages with a stop in the execution of the program. See section 4/11 of your Level II User's Manual.

LINE PRINTER test function

The status of the line printer is indicated by location 14312 (decimal) in memory. If that loca-

tion contains 255, the printer is turned off. If it contains a different number, the printer is on.

```
10 REM * PRINTER TEST ROUTINE *
20 IF PEEK(14312)=255 THEN PRINT"PRINTER IS OFF" ELSE PRINT "PRI
NTER IS TURNED ON"
```

LINE PRINTER OUTPUT SUBROUTINES

Here are three ways to add class to your programming when you are using output to a line printer. Example 1 allows you to skip several lines smoothly. Example 2 tells you how to use the top of form command. Example 3 gives a status check to see if the line

printer is turned on and ready to print. Using it, you avoid a lockup in a system that is not connected to a printer. One final hint; connect a space to the end of a printed string variable, as in LPRINT A\$;" " so that your printer does a linefeed even with a null string. The Centronics printers ignore null strings completely.

```
5 REM * SKIP LINES IN PRINTER OUTPUT *
10 INPUT"HOW MANY LINES DO YOU WISH TO SKIP";A
20 LPRINT STRING$(A,138)
```

```
5 REM * TOP OF FORM (NEW PAGE) ON PRINTER *
10 INPUT"PRESS ENTER FOR NEXT PAGE";A$
20 LPRINT CHR$(11)
```

```
5 REM * DETERMINE PRINTER STATUS *
10 CLS:PRINT"PRINTER STATUS CHECK"
20 PRINT:PRINT"TURN PRINTER ON AND OFF TO DEMONSTRATE PROGRAM"
30 IF PEEK(14312)=255 THEN PRINT@ 440,"<< PRINTER IS TURNED OFF
>>":GOTO30
40 IF PEEK(14312)=63 THEN PRINT@440,"<< PRINTER IS READY TO PRIN
T >>":GOTO30
50 PRINT@440,"<< PRINTER ON BUT NOT READY >>":GOTO30
```

Lifeboat Associates, specialists in microcomputer disk software, is proud to offer the first professional disk-based language and utility package for the Radio Shack TRS-80 computer. Written by Microsoft, creators of Level II BASIC, the package runs on a TRS-80 system with 32K RAM, one or more drives and TRSDOS. The software is supplied on diskettes and consists of:

FORTRAN a true relocatable machine code compiler for ANSI FORTRAN X3.9 (except COMPLEX variables).

MACRO ASSEMBLER a disk-based macro assembler utilizing Zilog mnemonics and producing relocatable code.

LINKING LOADER a link-edit and load FORTRAN and assembler modules for execution.

SUBROUTINE LIBRARY a complete library of subroutines existing as relocatable linkable modules for FORTRAN or assembler programs - e.g., double precision, square root, natural log, transcendentals, etc.

DISK TEXT EDITOR to create and modify FORTRAN and assembler programs as disk files: also can be used as a general purpose text editor for correspondence and other documents.

TRS-80* FORTRAN SOFTWARE PACKAGES

This high-powered professional software package with full documentation is available at the DISCOUNT PRICE OF **\$150.**
PER COMPUTER SYSTEM

The Macro Assembler, Loader, Editor, and Cross Reference Utilities alone **\$80.**

The Fortran Compiler, Loader, Editor, and extensive library of scientific functions alone **\$80.**

Plus \$5.00 shipping (separately \$2.50 each)

TINY COMP

by Dave Bohlke

A BASIC **Compiler** in BASIC! Run your source program in BASIC, compile it into FAST Z-80 Code and execute the compiled version — all without reloading. 26 integer variables, GOTO, GOSUB, END, REM, RND, LET, +, *, /, IF, THEN, ELSE, <, =, >, INKEY\$, CLS, PRINT@, CHR\$, PEEK, POKE. Compiled programs may be saved via TAPEDISK.

Supplied with game program, "3D TIC TAC TOE", which uses all of the TINY COMP Statement set and is ready to compile.

Manual includes several sample programs as well as thorough documentation of the Compiler for those who like to know "how things work" and for those who might even wish to EXPAND on TINY COMP's capabilities.

Tape version: **\$19.95**

Disk version: **\$24.95**
