

PARROT

PARROT II AUTO-PLAYER DEMO

PARROT II AUTO-PLAY DEMO

Parrot II is a sound sampler for 8-bit Atari computers. No you can play digital music on your Atari 8-bit computer's keyboard, or use true digital sound in your own programs.

The complete Parrot II System includes a digital sampler which plugs into the joystick port, and a complete software package which records, controls, and plays back your sound.

To load the demo disk, place it in drive 1.
(Atari 800 Computers - Insert the BASIC cartridge.)

Turn your computer on. An introduction screen will appear. To run the demo, press the Space Bar.

The Main Demo screen has two parts. The Mix-N-Match part on top has two columns. One contains a selection of sounds, the other a selection of tunes. The bottom Song Player section displays the names of songs.

To try Mix-N-Match, press 1. Use the arrow keys to select the tune and the sounds. Press RETURN to play. Press OPTION to stop the tune. Press ESC to return to the Main Demo Screen.

To try the Song Player, press 2. Use the arrow keys to select the song. Press RETURN to play. Press OPTION to stop the tune. Press ESC to return to the Main Demo Screen.
