

Now you can have the right terminal package for your communication needs! From ST-80 UC - the simple, pre-set, inexpensive terminal program designed for users of THE SOURCE, MICRONET, and FORUM 80 - to the power and sophistication of ST80 III, The Software Exchange has the package for you.

All four programs include the ability to use an unmodified TRS-80 keyboard to produce RUB, ESC, and other control characters for time sharing, software control of the RS-232-C board, repeat key, bell, software support for the three most common upper/lower case hardware conversions, and line printer output.

## ST-80 UC 4K Level II cassette, \$24.95

This universal communicator program is an easy-to-use timesharing program for the beginner. Special features include preset parity, word length, and baud rate (regardless of switch settings on the RS-232-C board) for THE SOURCE, MICRONET, and FORUM 80, automatic testing of the RS-232-C board, and even spooling of prepared messages on tape directly into FORUM 80 using a basic program supplied as a line listing.

## ST-80 4K Level II cassette \$49.95

The original smart terminal program for the TRS-80, ST-80 lets you reprogram your RS-232-C board from the keyboard, and run at different baud rates. Does not have auto testing of RS-232-C or tape spooling.

## ST-80 D 32K disk program, \$79.95

Special features include connection time clock, option of user-created translation tables for keyboard, gathering and pre-formatting data to be sent directly from disk to host computer, spooling of received files to disk or printer, editing of received files, and auto logon. If you use it with VTOS 3.1, you also get device driven $1 / O$, job logging, and chaining.

## ST-80 III 32K disk program, \$150.00

ST-80 D with extra utility programs

## About the Author

Having spent the last 10 years working as a stage electrician and audio technician for numerous Broadway shows, Mr. Saturn wanted to combine his firsthand knowledge of the workings of the world of professional Broadway theatre with his interest in personal computers. The result is "BROADWAY", a true-to-life simulation of the production of a Broadway musical.

A softside service for the personal Computer market
Quite often we receive submissions that are not commercially marketable. For example, someone may have a useful program for rabbit breeding, but we do not have enough demand for it to justify the cost of reviewing, advertising, and publishing it. A medium is needed for the exchange of information on specialized programs.

Therefore we will maintain a catalog of sources for this software and publish it quarterly at a nominal cost. If you would like to list your software (FREE!), send this form to:

## S.S.S.S. <br> P.O. Box 68 Milford, NH 03055

This is a medium for original authors only. Name and address of the programmer must appear in ad. We reserve the right to refuse any ad, and will publish only ads for non commercial practical applications. SoftSide does not review or warranty these programs in any way.

SUBMISSION FORM:
PLEASE PUBLISH THE FOLLOWING AD IN S.S.S.S.:
$\qquad$

## PLEASE NOTE:

TRS-80 is a tradmark of the Radio Shack a division of Tandy Corporation. The Software Exchange is not connected in any way with Radio Shack or Tandy Corporation.

SoftSide Magazine is continually seeking original articles and software for publication. Imagination and variety in concept and content are our primary criteria for acceptance. Payment varies with length, suitability, ease of editing and quality.

Our policies with respect to software purchase are highly individualized, and offer the programmer several options, including one-time publication rights, outright purchase, and royalties on sale of prerecorded cassettes. Program submissions should use Radio Shack Leve! II Basic, should run in Level II and Disk BASIC, and may not employ coding techniques that cannot be accurately presented in a line listing, such as SYSTEM modules and "super graphics" or other hybrid methods. For more information, please write: SoftSide, PO Box 68, Milford, NH 03055.

SoftSide is published monthly by SoftSide Publications, 6 South St., Milford, NH 03055. Subscription rates: USA bulk rate - $\$ 18$ per year. USA first class, APO, FPO, Canada, Mexico, overseas surface mail - $\$ 25$ per year. Overseas airmail -. $\$ 30$ per year. All remittances must be in U.S. funds. Mail subscription inquiries to: SoftSide Subscriptions, PO Box 68, Milford, NH 03055. Entire contents copyright - 1979 by SoftSide Publications. All rights reserved.

## OUTGOING MAIL

It is beginning to become apparent that without significant advances in the protection of software against copying, top quality programs will be unavailable. We know of an outstanding machine language data base manager by one of the best known micro-computer programmers that will probably never be released for the TRS-80 due to the copying problem. Instead, it will be sold to business computer manufacturers to be included in the price of their system.
This has become a special problem for The Software Exchange as many of our best programmers have learned that the only way to get a fair return on their effort is to do custom programming or work on other computer systems. It is a terrible shame that the most popular computer in the worid cannot offer a fair return to qualified programmers. For example, as one of the largest publishers of TRS-80 software, TSE paid only $\$ 45,000$ in royalties last year. Compared to our TSE payroll of $\$ 60,000$ last year, that seems significant, but we have an author whose typical fee for a single OEM program is $\$ 50,000$ !
in our own case, copying of software reduces sales to the point that we have to turn down many programs because of reduced sales potential. In other cases, we must strictly limit the amount of time we spend checking for errors, with the result that a few of our programs go out with significant bugs.

We are investigating various methods of making tapes and disks hard to copy, although we hate to do it. It is a muisance to load such tapes and the lack of a backup means that we would need to make provisions for replaceinents.
Probably the market that hurts the most is the educational market. Educators complain that most of the educational programs on the market are junk, but then a school with 34 computers buys one copy of a $\$ 14.95$ program. makes a copy for each machine, and several of the students make copies to take home. For that, the average school we have dealt with asks for a letter of specifications, and then asks for an educational discount and 90 day credit terms. Two weeks later we get a complaint from the school because the program won't do something that they wanted to do with it. The result is that we avoid educational applications like the plague, and the people who do deal with schools have to charge 20 times as much for a program to pay their costs. That is why you see Bell and Howell seiling Apple computers under their own name: they have to charge more to make up for the selling costs of the educational market.

Another arena for concern is the local computer club. One of our authors told us of selling 5 copies of his program at one of the largest clubs in the country, and finding it all over the state a month later. We appreciate the fine features of the clubs. In fact, the same club just referred to has benefited TRS-80
users tremendously through its newsletter. To encourage clubs to work toward reducing misappropriation of software, we are offering clubs a $20 \%$ discount on purchases of TSE software. The only restriction is that at least five copies of each program must be purchased at the same time. Orders for 4 or fewer copies of a program on the same order must pay full price, but you still save a little on the handling charge.

My authorship of the Automated Diskette Directory has brought me into contact with a special breed of person that we call "The Collector". One person called me to complain that it took my program three days to sort his titles. After talking further, I discovered that he had two thousand programs acquired by copying anything brought into his store. We must be doing something wrong, for we have only half as many programs! We have met other collectors who make it a point of pride never to pay for software, or at least never to pay full price. The real damage of the collector is not in stealing the software, for just how many programs can one person become familiar with and use? The damage comes when these people act as a warehouse and give away (some even have the gall to sell it for their own profit) the pirated software.

The one practice that upsets me most about pirated software is when people manage to sell it to me as their own program. Many things I catch: for example, about once a month someone submits Pillbox, which we published in October 1978. But sometimes I miss. We have gotten several complaints that January's Dante's Interno is an only slightly modified copy of Roger Chafee's "Quest" from the July 1979 Byte. Also,
about the same time that I was criticizing the TRS-80 version of 101 Basic Computer Games, someone managed to sell me an unchanged version of a game from the original for SoftSide: Apple Edition. (Note to Dave Ahl poetic justice?)

Of course, I realize that I am vainly protesting against human nature. Given a choice between short term personal profit and the long term interest of society, most people opt for themselves. These are the same people who loudly proclaimed last year that there was no energy crisis, the people who instead of raising taxes, borrow money to run the government so their children can pay the bills, and the politicians who are totally incapable of thinking past the next election.

I have come to the point where I have a deep appreciation for, and feel profound gratitude toward almost every one of our regular customers. Surely these must be a cut above the rest of humanity, the last bastion of integrity in a morass of egomania and advantageseeking.

## CCA DATA MANAGEMENT SYSTEM FEATURES: PEZ50NNL SOFNKAE

- Complete, illustrated manual in a three ring binder
- Handles 1, 2, 3, or 4 disk drives
- Written in BASIC, with instructions for writing your own programs to use DMS files, including $1 / 0$ routlnes.
- Create, add, update, or delete files easily.
- Search any field for any data.
- Sort by any field.
- Print reports, selecting any fields in any order, and maintain totals and subtotals on any numberic flelds.
- Print mailing labels.
- Print records selectively, for example, only customers with New York addresses.
- Codes printed on screen refer you to manual for explanation at all times $1 / 2$
- Complete index in manual.
- Scan function to report statistically on file. You might ask how many accounts are overdue and receive a report that stated 10 records found in 200 records scanned ( $5 \%$ of file).
- Automatically tests line printer ready state to avoid system lockup.
- Printer alignment pattern for labels.
- Warning issued if you try to compact data without creating a backup. (You can ignore warning).

## Comes on cassette tape for $\$ \mathbf{\$ 9 . 9 5}$ (plus $\$ 2$ shipping)

APL is a powerful and elegant computer language, yet it is easy to learn. It is ideal for the engineer, scientist, mathematician, circuit designer, or for the person who just wants to learn a new language.

Due to the absence of the special character set for APL on the TRS-80*, APL 80 uses shifted letters, which are identified on the screen with a lighted graphics block before the letter. If you have a modified TRS-80 (Electric Pencil Modification), a lower case driver is included to display the shifted letters on the screen.

Special features of APL 80 include the ability to save and load workspace on disk, return to DOS for directory or commands without losing your workspace or variables, and send output to a line printer. Four workspaces are included with lessons on the use of APL operators, commands, and functions, with many examples.

All of this plus instruction manual and the book APL: An Interactive Approach, for only $\$ 49.95$ plus $\$ 1.00$ shipping. $32 \mathrm{~K}, 1$ disk required; 48 K recommeded.
Reduced featured, 16K Level II tape version, no lessons, no book, I/O capacity, $\$ 14.95$; with book, $\$ 39.95$ plus $\$ 1.00$ shipping.
APL An Interactive Approach, Separately, $\mathbf{\$ 1 5 . 5 0}$ plus $\mathbf{\$ 1 . 0 0}$ shipping.
The Software Exchanye

LINE-FOUR is a two player game of "tic-tac-toe" style strategy which can be enjoyed by kids and adults alike. The object is simply to line four of your pieces up in a straight row either vertically, horizontally or diagonally at any location on the board. You must, of course, keep a watchful eye on your opponent as he will be trying desperately to get four in a row before you.

To move you must first decide whether your move is to be defensive or offensive. Your offense must be carefully planned out in advance, but flexible in case of unexpected events. Presumably your opponent is not going to simply let you line four men up in a row without some attempt to sabotage your plans, so you must force your opponent to place his men where you need them. You do this by lining up three of your men, leaving your opponent no choice but to fill the fourth spot to block
you from winning. If you can be subtle and clever in doing this you stand a good chance of succeeding. As the game progresses into the upper levels watch out for possible two-way runs for yourself and by your opponent - they end a game quickly!

Defensively you must try to anticipate your opponents plans and thwart them at the last minute. This not only results in wasted moves for your opponent, but allows you time to build on your own master plans while your opponent thinks he's getting away with something. (Hopefully he hasn't figured out what you're up to yet and is not waiting to pounce on you.)

When it's your turn you must enter a number one to nine which corresponds to the column in which you want your man placed. Your man will appear at the top of that column and move downward
until at the bottom or until its path is blocked by another man. If you attempt to place a man in a row which is already full, a message to that effect will be displayed and you will be given another chance. Plays continue alternately until someone gets four in a row or all the board positions have been played and the game declared a tie. After each player's turn the computer will check for a win, and if there is one, the victorious player is announced and the scores updated.

At this point you are given a choice between depressing the CLEAR key which resets the scores and begins the match over with 0 going first, or, depressing the ENTER key thus continuing the match and keeping the scores. The computer will automatically rotate the player going first with each game to minimize the advantage to either player; thus you use the same pieces (X's or 0 's) for the entire match. You may play as many games in a match as you wish - there is no set limit.

The finest musical program we have seen for the TRS-80. It deserves a quality amplifier. Amazing sound! Richard Taylor is an opera singer with a magnificent ear!
Selections:

- WILLIAM TELL OVERTURE MUSETTA'S WALTZ
- SEMPRE LIBERA - QUEEN OF THE NIGHT
- La DONNA E' MOBILE

## Challenge

"Didn't want to stop - nearly died laughing" - Scott Adams
Word guessing game with sound effects, one or two players. Truly challenging and competitive.
Separately on cassette .......... \$9.95 (each program) Both programs on disk ........ $\$ 19.95$ (two programs) The Software Exchange
 $\qquad$

## NUMEROLOGY

by John T. Phillipp

Contained within the name you received at birth is the uncanny ability to delineate your characteristics and forecast your future. The number of letters in your name and your date of birth are the basis for this occult art. Even skeptics are amazed at the accuracy of the readings...

ANOTHER GREAT FORTUNE-TELLING PROGRAM from the author of the highly successful SECRETS OF THE TAROT and I CHING. Complete your set! 32K Disk. ... \$14.95

The Software Exchange 6 SouthStreet, Box 68,Milford,NH 03055 603-673-5144

## byte off all you can chew!

# Z-80 and 8080 Assembly Language Programming by Kathe Spracken plus \$1. shipping 

Finally! A good tutorial book on assembly language programming by a master of the art! Kathe Sprackien, co-author of Sargon, tells you how with simple straightforward instruction.
$\$ 7.95$

## Microsoft editor/assembler plus

Plus what? Well, you get the features of the T-Bug and the original editor/assembler plus macros and conditional assembly, plus extra commands like substitute, move, copy, and extend, plus Z-Bug, a powerful debugging monitor with 8 level breakpoint capability. A bargain at $\$ 29.95$

## Super Simon

## By George Blank

Complete Z-80 disassembler with the ability to generate symbol tables, plus many features of popular monitors. Written in BAS!C with lois of remarks so it is easy to load, easy to understand, and easy to customize to your own needs.

## INPUT

The Scott Adams Backgammon is one of the best I have played. It is a little slow in making its moves but its moves are much more logical than the other backgammon versions I have seen.

There is only one slight problem. The location of the break key is right next to the dash key which is used in entering moves and it is very distracting, in the middle of a tight game, when the break key is hit by mistake.

The solution I have used came from your January 1980 edition under Programming Hints. I added the following line: 4 POKE 16396, 23

This line disables the break key and eliminates the grief and hairpulling of an interrupted game. Now the only grief and hair-pulling comes when the computer rolls itself double sizes!

Howard S. Gilman, Jr.
College Park, Maryland

I am amazed that no one has yet applauded David White's Treasure Dungeon II for the ease with which it lends itself to the formation of "new" adventures.
I now have four running adventures (counting the original). In fact I dran out of monsters and had to go out and buy E. Gary Gygax's "Mionster Manual" (from the famed DRAGONS \& DUNGEONS).
John D. Williams
Tampa, FL

I only yesterday received the back issue of SoftSide dated September 1979, and had not seen previously the article TREASURE DUNGEON-TUTORIAL. It is as fine an example of a well written, documented program as l've ever seen in this or any other magazine. The section oriented routine/ purpose/process documentation is the mark of not only a good writer (and I suspect a professional), but of damn good design. Not only are the variables listed and named, but the naming (PA for player attack factor, NM for number of monsters, gtc) is clear and easily remembered. It is a joy to find such a well thought-out, easily understood program. My hat's off to the author and the magazine.

Ian Chadwick
Toronto, Ontario, Canada
Gentlemen:
I have a few suggestions which may improve your magazine. One of these ideas is "programming puzzles". The one you had was very good, although you neglected to publish the answer. Another idea might be a monthly contest. A graphics contest (draw the best picture) or a program contest (best submitted program of the month) would improve your already excellent magazine. Suggested prizes would be free or discounted software or subscription rates.
Alan Simon
Bergenfield, NJ

Dear Sirs:
In your November 1979 issue of SoftSide, you mentioned that "...we were reluctant to publish a program that was not fully original." In keeping with this sentiment, I feel obliged to tell you that your "Dante's Inferno" program, January 1980 SoftSide issue, was in a large part stolen from Roger Chaffee's "Quest", Byte magazine, July 1979. All but a few of the descriptions have been changed, and the program suitably modified for the TRS-80, but it's still obviously the same material. The very least that could have been done would be to have credited Mr. Chaffee for his work, considering that the greater portion of the program is his.
Thomas Hanlin III
Springfield, Virginia

I have a helpful hint for disk users: If your disk drive turns on for no explainable reason, for example, if you are programming in Disk Basic and the computer locks up and turns on the drive, make sure that the cable that connects the CPU to the expansion interface is securely in place.

I also have a comment about your magazine. It is terrific. I await each issue eagerly to find out what you put in it this month. Keepupthe good work!

Matt Proudfoot
A 13 year old programmer
Munster, IN

## KVP <br> Keyboard, Video, and Printer Enhancements by Lance Micklus

900 byte machine lanzuage program allows you to use a serial printer with the TRS-80. You may specify acceptance of linefeeds. lines per page, characters per line, and printer handshake.
If you have the Radio Shack ${ }^{T M}$, Electric Pencili ${ }^{T M}$, or one of the other published lower case hardware conversions installed in your keyboard unit, KUP contains the software driver routines to enable the conversion.
Includes adjustable keyboard debounce routine. Another feature is direct entry of graphic and control characters from the keyboard.

## Requires 16K Level II or Disk Basic. On cassette \$24.95 Diskette \$29.95.

KUP 232, a special version for the small systems hardware TRS-232 interface, is available upon request at the same prices.

## InImIIIIITI Tape Recorder Azimuth Adiustment

## 

If the alignment of the read/record head on your tape recorder is slightly off, you may have a terrible time loading cassette tapes.
Get the Azimuth Adjustment kit from Just Right Products

## SYSTEM EMULATOR

Are you looking for a good April Fool's day gag to play upon your fellow programmers? This program will drive them nuts-if they haven't read this month's SoftSide. Even then, it is a great deal of fun to play with, though typing it in does take away most of the mystery.

The lines that look like super graphics or hybrid programming are phony. Just type them in, letter by letter, from the keyboard.

Now you too can have a computer that works just like the new IBM 4341!

Sooner or later someone had to write it!

Genealogy has become an enormously popular pastime as well as a lucrative profession for some) in the last few years.

The fascination is endless. Once you've come across your first amazing revelation - that you have a colorful ancestor who was a famous Indian Chief, or an advisor to an English King, or what-have-you - you're hooked, my friend, and as these people who were your progenitors come alive for you, like characters in a play, so does history itself light up like a stage.

ROOTS is an indispensable aid for all genealogists, whether amateur or professional. Up to nine generations of data may be placed into memory per file. Allows display of known data concerning a given individual; display of four generation pedigree; searches for specific information within a given category (finds all "Smith" last names, or all births in the 1890's, for example); sorts by any selected category; gives printed reports.

This simulation begins with a flashing Broadway marquee. The player (henceforth called the producer) is then asked to name the production company. This name will appear on the weekly report and on the closing notice at the end of the simulation. The program will accept any string (no commas, no double quotes) up to 15 characters and spaces.
After a basic introduction and some instructions, the producer attempts to raise $\$ 1,000,000$ to produce the show. As in the real world, past performance (as shown by a randomly generated "track record"; controls the ease with which the money is raised. The names entered in this section have no bearing on the amount of money raised (that is controlled by a random number in conjunction with the "track record") but do add to the fun of the simulation when the names of friends and relatives are used. If the money is not raised within 8 tries, the simulation ends and the producer can try again with a new "track record". If the
money is raised, it will be more than the needed $\$ 1,000,000$. The method used to lose the excess money is as true to life as any.

The program then explains to the producer about some assumed payroll expenses that will be deducted each week and then using 'read' and 'data' statements, lets the producer "hire" one of three people for each of 10 key jobs. As each person is "hired", their respective fees are added to a running total to be deducted before opening night and their weekly salary or royalty is added to a running total that is deducted each week. Each choice also assigns a certain number of quality points to a running total. These point values were assigned in accordance with the relative importance of the job. Choosing a high-priced employee tends to result in higher quality but too large a payroll can bankrupt the producer. A \#1 employee raises the quality point total, \#2 is neutral and does not affect the total while
a \#3 employee reduces the quality point total.

A theatre is then chosen: the larger the theatre (with a larger potential gross) the greater the expenditures both in rental and the cost of the staff employed by the theatre.

Each of the producer's four designers have submitted three designs in their respective departments. Each design differs in quality and therefore in cost. The one-time fee (for items purchased) and the weekly cost (for items rented) will be added to the respective totals on opening night. Technical appearance quality points are compiled as each selection is made.

The rehearsal period is five weeks long. The weekly payroll total is deducted for five weeks before opening. The one-time fees are deducted after the rehearsal period is over. At this point, the director has the option to have further rehearsals (a random function). Each extra week of rehearsal will cost the producer one week's payroll (here's where a high payroll and high technical expenses coupled with a few extra weeks of rehearsal can put the producer out of business).

On opening night, the producer will get a report of the total weekly cost figures. These figures, of course, are minimums. Salary changes and advertising will add to the weekly costs.

The reviews are generated as follows: each of the five reviewers have five reviews to draw upon ranging from great to very poor (Simon of New York Magazine will always give a bad review - a little humor for those familiar with the New York theatre scene). The quality points earned for personnel are doubled and the
quality points earned for technical appearance are added and the total figure is multiplied by a random number between 1 and 10 (the random number simulates the reviewer's personal mood). This determines which of the five reviews will be selected. This process is repeated for each reviewer. Thus five different people can see the same show and write five different reviews, a frequent occurrence on Broadway. As each review is chosen and printed, box office points are earned. Better reviews earn more points. More points mean more tickets sold. Box office points are also affected by advertising (1 point for each $\$ 10,000$ spent per week), ticket price (high prices keep people away), aging of the show (the longer a show runs, the harder it is to get an audience) and random events which will be explained later.

After seeing the reviews, the producer has the option of closing the show and returning what is left of the original $\$ 1,000,000$ to the investors. This option may also be exercised after getting the report each week.

If the show remains open, the producer must then decide on how much to spend on advertising that week. Any amount from $\$ 0$ and up can be spent limited only by the amount of money still available after the current week's expenses are paid. The money spent for advertising that week becomes part of the weekly expenses for that week only. No doltar signs or commas are used to input the amount spent.

The current ticket price is then displayed and can be changed in either direction using whole dollar amounts.

At this point a random event may
occur（usually every 3rd or 4th week）．There are both good and bad events and all will affect the box office action in one way or another．The 2 events dealing with pay raises will increase your weekly payroll．The other events add to or subtract from the current total of box office points．

At this point，the weekly report will be displayed．The number of tickets sold for the week is figured using the box office points，the original quality points of the show （before the critics influenced the public），a random number（to simulate the public mood）and the seating capacity of the theatre． The number of tickets sold is then multiplied by the current ticket price and the gross is displayed． The expenses for the week are displayed and deducted from the gross and the net profit or loss is
then displayed．Any loss is deducted from previous profits．If there are no previous profits available，the loss is deducted from what is ieft of the original $\$ 1,000,000$ ．If the front money is exhausted，the producer is out of business．In addition，every 13 weeks，a quarterly payment of $98 \%$ of the current profits is distributed to the investors and will not be available to the producer to spend on advertising or to cover losses．

The show may be closed after the report for any week is printed． When the producer decides to close the show，the closing notice is posted，the salaries for the final 2 weeks are paid by the salary bonds that were posted before opening， and the final totals are displayed showing among other things，the percentage of return to the investors on their investments．

# BOOKEEPP费G 

for small business
by Roger Robitaille, Sr.
Based on the famous Dome Bookkeeping System, this program is designed to serve the small business with few employees. Uses the same chart of accounts as the Dome journal, with instructions on how to customize to your own needs. Presents data year to last week, this week, and year to date. Enter checks and deposits; receive screen or printed reports - account summary, check register, deposits, and profit \& loss. Manual provided.
Tape version, Level II, 16K (without Dome Journal) ... ... \$24.95
(with Dome Journal) . . . . . . . . . $\$ 31.95$
Disk version, 32K (without Dome Journal .... ... \$29.95
(with Dome Journal) . . . . . . . . . $\$ 36.95$

George Blank's article in the January and February 1979 issues of Softside classified the four desirable qualities of games as: challenge, creativity, imagination and social interaction. This is a fair but incomplete generalization. Neglected was the very real appeal of visual or tactile stimulation. While Sargon may fulfill certain intellectual criteria as a game program, it cannot give me the pleasure of manipulating my wooden Staunton set around the board. The Orion series of games are very similar; good games perhaps, but distinctly boring as graphics go.
On the other hand, while race type games usually bore me in board form, I enjoy playing Round
the Horn or Atlantic Balloon Race particularly because of the graphic ingenuity shown (especially in the maps).

## Endgame

Another neglected appeal is the attraction of the endgame. Games done by computer designers so often show talent with program manipulation, but often lack game sensitivities by failing to generate a sense of purpose. The authors may be brilliant programmers, but they seldom come across as experienced gamers. What many games lack is a defined, limited set of objectives which encourage certain types of play, interaction, and produce measured reward.

Thus while the game Safari may be appealing in the opening, it rewards senseless, unrealistic risk-play by allowing a player to gain immediate points, be forced out of the game early, and still win by points! The game lacks any depth of strategy or tactics.
Santa Paravia, for example, allows an easy, early win by the reckless player. By engaging in heavy deficit spending on cathedrals and palaces, as well as mills and markets, the player may create a large base of nodes, clergy, and merchants who do not disappear when creditors repossess your property and edifices. Thus the player is encouraged to overspend enormously in order to obtain the taxable base necessary for immediate growth. This is the kind of error that a programmer may not foresee while a gamer would expect to occur, especially one used to the multi-player warleconomic/diplomacy games that abound these days (Diplomacy, A mighty Fortress, Conquistador, Machiavelli, Mercenary, etc.).
Shooting gatlery games, under no matter what disguise, be it a Star Wars mask, or a torpedoltank/ gun cover, are prime examples of the limiled objective game. The level of boredom generated by these games rises proportionately with the number of times they are played. There is just not sufficient interest generated by their objectives to make then perennial favorites on the computer. (By this 1 assume that anyone with enough intelligence to operate a computer is intelligent enough to become easily bored by what is better and more often played in a pin ball gallery).

## Drives and Outlets

Too, games must provide an outiet for a certain aggressive drive. This comes under the category of challenge. I credit those who purchased computers with the need for greater, more complex stimulation than that provided by say, a jigsaw or tiddley winks. This means that games such as Golf, which in reality only represent guessing games of a more sophisticated nature, will have a short life as a run program, while Air Traffic Controller or Melt Down will have much longer life. It is my observation that games with a military framework (be it Star Trek or Kriegspiel or the like) have a greater appeal because the military aspect provides its own justification for aggressive activity..the raison d'etre so to speak.

## "Chrome"

Imagination is far more critical in a computer game than in a board game where playing surface and pieces help extend the game's universe into the player's conscious. The asterisks, light spots, and symbols of such games as Invasion Force or Starfleet Orion convey no real, visible image to help the 'suspension of belief' leap the gamer needs to really appreciate the game, so there must be a greater emphasis on imaginative movement, play, or 'chrome'. However, imagination only hoids the players' attentions for a limited time.

In the "compunovel" games such as Adventure, Voorloo Castle, etc., imagination makes the game acceptable, but once the puzzle is solved, the game immediately loses interest. The lack
of continual challenge, changing conditions, or different scenarios make these games while no "one-shot" efforts, of limited interest after their solution. Don't get me wrong-I loved solving these two mentioned games, but they only took 6 or 8 tries each to unravel. Now what do I do with them?

The problem slde of the compunovels, it seems to me, is the utter lack of supportive graphics to help the role-playing aspect and the suspension of belief, but suggestive graphics such as those found in Tunnel Vision can heighten the effect considerably.

While I enjoy gaming solltalre against the machine, I feel that more is required when playing with other players, mostly in real player interaction, but also in game "chrome". The great joy in playing Santa Paravia comes from watching one's kingdom grow and flourish, visibly and not just in numbers or graphs.

## Action and Interaction

Returning momentarily to the question of continuity of action; when a number of players are involved in any game (say 4 to 6), and there is no interaction between them, the time spent awaiting one's turn can seriously dilute the continuity between actions. A good way to increase the interest level is to make the player sequence random every turn. This can radically change play, especially in the endgame of such a game as Round the Horn where two or more players are nearing their objectives. Another useful inclusion is a random events table which, while not interfering continually, does
not guarantee the success of even the most carefully considered plan of action. This improves Santa Paravia considerably, for example, and also Safari, as well as giving the random penalties in End Zone a realistic touch.
Bold action, it must be remembered, ought to be tempered by severe restrictions against foolishness and unrealistic play. This is a hard line to draw, and it takes a sophisticated, experienced game player to recognize the parameters involved in a particular game. One must be careful not to place too much emphasis on challenge as continuity unless one has accounted for the spectrum of possibilities for over-reaction.

Social interactlon is sorely missing from most of the computer games I have played. The vast majority of the games are multplayer solitaire games. Santa Paravia, Safari, Round the Horn, Balloon Crossing...all despite the number of players have no functional player interaction. There are no conditions for war between players, for action if players occupy the same locale, for economic or diplomatic maneuver. Santa Paravia has an undefined, infinite pool of land, serfs, and wheat which adds to the lack of realistic play it should encourage.

## Those Pesky Bugs

This brings me to a point which is perhaps more subjective than other areas previously discussed: that of the errata, or 'bugs' so often found in both written and taped programs.

As a wargamer, I have become accustomed to the almost obligatory errata sheet in my games. I am not so ready to accept errata in my computer programs. It is far more difficult to debug a program than to do the same for a wargame.
There are, it seems, two kinds of bugs to deal with; those of program nature, syntax errors, undefined lines, any of the error codes, and those caused by the improper application of the English tanguage. Now while the latter may not affect program running, it offends me to find such glaring grammatical and/or spelling mistakes as 'your' instead of you're (Treasure Hunt intro.), as 'rediculous' instead of ridiculous (Dog Star, line 6800), 'waring' instead of warring in Safari (line 699), ‘nember’ Instead of number in Super Sub (line 25163), 'affects' instead of effects in the same program (25161, the instructions of Super Sub suffer from more than their fair share of grammatical errors, ie; lines 32767, 25164, 34040, 34060 to name a (ew). The point is that although typos do exist and one may expect a few to sllp through past even the most conscientious editor, there exist enough to draw the conclusion that brilliant in their field these authors may be, they lack comprehension and capabilities in the English language.

The former bugs are also com-mon-enough to suggest improper design and/or playtesting. it is hard to fathom a designer's intent when coming across an undetined line (example; tine $15 \dagger 7$ in End Zone says GOTO01502. Fine but 1502 does not exist!). I had encountered so
many errors in my taped edition of Treasure Hunt that I had to save a significantly changed copy on another tape after hours of rewriting. In Population Stimulation, goods are not traded between both planets, only Techno receives the benefits...a rather lopsided game! I encountered various errata with End Zone. Isolate will not work after two typings (which may be some unrecognizable syntax error on my part but immediately after entering who is to go first, the computer says that side wins..without making a move).

My view is a little different, since I purchased my TRS-80 with the intent to expand my game design and gaming horizons, not merely to enjoy games as a secondary or even tertiary pastime. When I talk about game principles or make these criticisms it is from either past experience or design intent that I speak.
*TRS-80 is a trademark of Radio Shack \& Tandy Corporation

Mr. Chadwick says of himself, 'Although relatively new to the fleld of computers, i have had a long affair with games and game design (which includes six years of wargames and fantasy role playing games).

## TRS-80 CLUB

...Manchester, NH...TRS.80 CLUB...Activities include programming lessons, hardware and software improvement and development, guest speakers. For more information write: Scott Mitchell, 346 S. Taylor St., Manchester, NH 03103.

## INFINITE BASIC

Adds more than 70 commands to BASIC that can be merged in any combination to make efficient use of memory. Includes matrix read, inverse, transpose, identity, simultaneous equations, scalar, vector, and multidimensional array arithmetic, dynamically reshape, expand, and delete arrays, change arrays in mid program, read and write arrays on tape, copy elements, zero and move arrays. String functions include left and right justify, truncate, rotate, text justification, string centering, delete and insert substring, pack string, convert upper and lower case, translate characters, reverse strings, verify function, test number of occurences, masked string searches, encrypt and decrypt string, compress and uncompress string characters. High speed sort routines for strings and arrays, including multikey sorts, are also part of this package.
For business users, an add on package includes multiple precision packed decimal arithmetic, with up to 127 digits of accuracy, binary search of sorted arrays, insert elements in sorted arrays, automatic page headings, footings, and pagination including forced end of page, and automatic hash for record retrieval. Infinite BASIC $\$ 49.95$.

Infinite business (add on) $\$ 29.95$

## COMPROC COMMAND PROCESSOR

Chain multiple steps in disk BASIC upon power up, relocatable key debounce, allows pauses for data entry at specified steps during execution (on cassette for disk systems only) Order TS27E for $\mathbf{\$ 1 9 . 9 5}$.
DOSORT
BASIC control program with high speed machine language sort for disk users. Merge and sort files on more than one disk if you have 2 or more drives. Self prompting with manual. Specify 32 K or 48 K version, order TS26C for \$34.95.

## GSF GENERALIZED SUBROUTINE FACILITY

18 machine language subroutines with easy access for BASIC users. Sort 1000 element arrays in 9 seconds, read and write arrays to tape, compress and uncompress data, move arrays in memory, duplicate memory, fast horizontal and vertical lines, 5 routines for screen control. Specify $16 \mathrm{~K}, 32 \mathrm{~K}$, or 48 K version, order TS25C for $\$ 24.95$.

## REMODEL PROLOAD

BASIC program utility allows you to renumber portions of a program, move portions from one location to another, delete, merge, save and verify combined and changed programs, and create your own library of programs, subroutines, and even data statements. Works on tape or disk systems. Two programs on one tape. Specify $16 \mathrm{~K}, 32 \mathrm{~K}$, or 48 K (unspecified orders receive 16 K ) order tape TS22C $\$ 34.95$

## TIMSER

Time series analysis program fits data to 9 different 1st, 2nd, and 3rd order curves. Goodness of fit data, tables, projected data, confidence limits, curve fit, variance, correction factor, seasonal and cyclical variations, inflation corrections are all implemented. Detailed user manual with illustrated examples. Order tape RD11C at $\$ 14.95$.

## Y-YBAR

Optical system design program allows manipulation of ray heights at lens surfaces using Y - Y Bar diagram method. With documentation on tape for $\$ \mathbf{1 4 . 9 5}$.

## TFis Ino Softuane Exchange 6 SouthStreet, Box 68, Milford, NH 03055 603-673-5144

You command the anti-aircraft guns as suicide planes dive toward your ship in this exciting game of skill!
A live-action game with machine language graphics (plane and ship) for fast-paced fun. Three levels of play: Beginner, Amateur, and Professional.
For Level II, 16K Price, $\$ 7.95$

- II I had to choose only one Star Trek program, it would certainly be TIME TREK.". $80-$ US Comparative Review July, 1979.
Your mission: Destroy from 8 to 80 Klingons (Skill level 1-10) before they destray your 7 or 8 starbases.
Real Time! (in FAST machine language)
You can maneuver even when being fired on! Dodge enemy fire!
You have only seconds to respond when you get an SOS from a starbasel Yet In 5 seconds in this game you can move from one quadrant to another, maneaver into position for battle, and destroy the enemy, or if you are not careful, be destroyed yourself. If you wait longer, you will arrive just in time to see your starbase explode and the Klingons move off the edge of the screen. 4K SYSTEM Tape (will load in Level I or II TRS-80)

EאEFKK KEY DISARLE.
LEVEL II ERSIC POKE 16396, 22
DISK EASIC POKE 17170. 175
POKE 17171, 201

2
Keyboard Access

| Location | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{4}$ | $\mathbf{8}$ | $\mathbf{1 6}$ | $\mathbf{3 2}$ | $\mathbf{6 4}$ | $\mathbf{1 2 8}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 14337 | $@$ | A | B | C | D | E | F | G |
| 14338 | H | I | J | K | L | M | N | O |
| 14342 | P | Q | R | S | T | U | V | W |
| 14346 | X | Y | Z |  |  |  |  |  |
| 14352 | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| 14368 | 8 | 9 | $\vdots$ | $\vdots$ |  | $=$ |  | $?$ |
| 14400 | enter | Cl | bk | l |  |  |  |  |
| 14464 | Left and | Right shift are \#1 |  |  |  | spc bar |  |  |

To use this chart simply find the character you want to use; note the number to the far left under the location heading and also note the number above your character. This will function (when used in the form: IF PEEK(LOCATION)=INPUT \# THEN etc. where Input \# is the number directly above your character) just like an INKEY\$ except that the PEEK statement will always read that input \# while the key is being pressed. Therefore, one doesn't have to keep punching at the keyboard. If you use a RND statement to go to either input location randomly, games no longer become a battle of the INKEY\$'s. This adds to the game and saves your keyboard.

Part of our livekey routine was missing in the January SoftSide, so we reprint our updated version. Try it for your keyboard entry routines.

PROGRAMMING HINT: (Level II only)

How do you recover a BASIC program which has been destroyed by command NEW? This method is particularly useful when you have just finished entering a long program and then accidentally typed NEW:

1. POKE 17130,1
2. SYSTEM
*/11395
3. LIST (you should see your program on the video display)
[^0]
# THE AUTOMATED DISKETTE DIRECTORY 

by George Blank
All you do is insert the diskette in the drive and type the name or number you use for that diskette. The program automatically reads the directory of the diskette, ignoring invisible files like BASIC/CMD and normal DOS files like DISKDUMP/BAS, and stores it in a disk file.

## DISPLAY OPTIONS INCLUDE:

Printout to screen or line printer Alphabetic sort
Search for single program using INSTR (A search for TRE would find STARTREK and TREES) Index to a single disk Search and RUN program

Three programs with instructions for loading on a NEWDOS diskette and instruction manual.
IMPORTANT: This program requires the following minimum system:
At least TWO disk drives NEWDOS by Apparat(Uses CMD"OIR"and OPEN"E") 32K of memory

## PR Dogfight

 by David Bohlke Level II, 16K $\$ 7.95$ A challenging game of aerial battle - you climb, dive, fire at the enemy forces, and with every hit you gain more points toward becoming an ace. But if you get too close, they'll shoot you down! Between raids, you land to replenish your fuel supply atfriendly airstrips (but don't crash into the tree). You have seven missions to score 1,000 points. Total point accumulation chart, bar graph showing progress of each player, intelligence report of entire Battle Zone. 1-5 players. Excellent graphics.

The computer has 1000 five letter words in memory. The player's task is to guess the one the computer selects. The player picks a word; the computer tells the player how many of the letters in the chosen word are in the computer's word; the player picks another word; and so on until the player guesses right. An absorbing one or two player word game that is also a great vocabulary and spelling tool. 80 SOFTWARE CRITIQUE recently recommended it highly, calling it 'much more fun and more of a challenge than Hangman and similar word games.'

Sonic Torpedoes is a targeter game in which you have a fixed torpedo launcher. Three different types of alien space craft fly over your launcher. Your goal is to destroy as many of the spacecraft as possible given the number of torpedoes and amount of time allotted. As you destroy more ships, your rating (displayed in the lower right-hand corner of the screen) will increase.

## Special Features

Sonic Torpedoes is unique in two ways. First, it is one of the few programs with sound effects which work in 4K of RAM. Second it makes use of VOICE INPUT. You fire your torpedoes by saying the word 'FIRE' into a microphone which is plugged into the cassette recorder. This function is achieved by use of the INP(255) command.

NOTE: Because the cassette amplifier is used in the voice command, the sound effects require an external amplifier such as that sold by Radio Shack under the Archer name for \$12.00.

Also the program is designed to be both Level II and disk compatible.

445 RETUN N
 469 RESTNE445

by Phillip Case

Recently the latest rage in programming has been the use of sound effects in games. In this issue of SoftSide is a program titled SONIC TORPEDOS which has a unique method of permitting you to control the program by voice input. This article will show you how to use this technique in your programs.
Believe it or not, this technique was accidently discovered by myself and Chris Freund (familiar name among SoftSide readers) while working on another program.
First, a microphone is required for voice input. It is to be plugged into the MIC jack of your cassette recorder. Then unplug both the AUX and REM plugs and leave them loose. When this is done, depress the tab sensor in the cassette bay, the RECORD and the PLAY keys all together.
The program commands themselves are relatively simple.

The microphone causes the value of the cassette to change whenever sound is sensed. To check the value of the cassette port use the INP(255) command. This will give you a value to work with in your program. The value of the port will be 255 , if sound has been detected, and 127 if not. Use the INP(255) function as you would the INKEY\$, i.e., within a loop.
Once sound has been detected, the value of the cassette port will remain at 255 until you either clear the screen (CLS) or home the cursor (PRINTCHR\$(28). This must be done to reset the cassette port for receiving sound. It is suggested that this be done just prior to checking the port so that no background sound be picked up.
There is a little problem that arises if you are in the character mode and you are trying to use this technique. Because the 32
character mode is controlled via the same port as the cassette recorder, the values of the port are different when you are in that mode. For the same reason it is possible to get double size fetters on Level I with a little work.
Below is a table showing the varlous values under different conditions:

The following program will print 'SOUND!!!' in the upper-left hand corner of your screen

MODE 64Char. 32Char No
Sound 12763
Sound $255 \quad 191$

Here are two examples of how to use sound input in your programs.

The following program will tion of your voice. display a graphic representa-
whenever the computer is picking up input from the microphone.

``` ELSE 10
```

```
FLSE 10
```

```
10 15:FOKX=0T0127:PRINTCHR9(2%):IF INP(255)=255 THEN Y=22 ELSE
Y=23
20 SFI(X,V):NEXT RON
```

If you are interested in seeing how to incorporate this technique into your games, refer to

SONIC TORPEDOS elsewhere in this issue.

## Please Note:

The credits for Mail List II go to Small Business Systems Group from Dunstable, Massachusetts. Our sincere apologies for our typographical error that has given the program miscredits in the past.

This fast paced real time action game is a contest between a Bee operated by the player and a Spider operated by the computer. The Bee tries to sting the Spider in a vulnerable spot while the Spider tries to jump up and swallow the Bee. Fast paced animation, sound, and real time action. Machine language subroutines, but loads as Level 11 for easy operation.

## T-SHORT

## SHORTHAND for LEVEL II and DISK BASIC

* TSHORT ${ }^{\text {TM }}$ lets you type LEVEL II and/or DISK BASIC more quickly and accurately than ever before. Save up to $90 \%$ programming time and achieve $100 \%$ accuracy.
* 

31 programming statement keys.

* KUSTOM ${ }^{\top M}$ key, up to 64 characters - changeable anytime.
* 

42 key decals (see picture). 10 area different for DISK users.

* A single, shifted-key entry types entire statement on screen.
* Fast, efficient machine language.
* Uses 580 bytes of LOW memory, i.e.: No MEM SIZE req'd.
* Comes on cassettes, one side LEVEL II, the other for DOS.
* Compatible with DOS 2.1, 2.2, 2.3, NEWDOS, KBFIX, etc.
*DOS version loads to and executes from disk via TAPEDISK.
*Features self-entering commands: CONT; GOTO10: KUSTOM ${ }^{\text {TM }}$ (Self-enter optional)
* TSHORT ${ }^{\text {tM }}$ W/4 page instruction manual $\ldots . . . \$ \mathbf{9 . 9 5}$

# This Could Be The Handiest Program You Own! By Ken Knecht Dymanicillatalkase 

A data base manager is a general purpose file management program that can be set up for different uses. This could be the handiest program you own!

You specify the number of items in the file, whether they are numerical or alphanumeric and how long each item is, and the program creates the file, receives your data, sorts it, searches for information, stores and retrieves from disk, and will even perform arithmetic with data items.

Very easy to learn and use, yet you can use it for mailing lists, hobby collectons, inventory, appointments, accounting, work organizing, radio logbook, billing records, telephone numbers, or a thousand other uses!

Manual and 3 programs in basic on disk for 32 K or large systems with one or more drives only $\$ 39.95$

## 25F The Software Exchange <br> 6 SouthStreet, Box 68,Milford,NH 03055 603-673-5144

## The Best

 Has Gotten Better!Sargon, the program that came in first in the Creative Computing Microcomputer Chess Tournament, has become Sargon II-\$29.95 -A vastly improved game - Faster response time - New level 0 for beginners
-Easier to pre-set board

- Hint mode - What does the computer suggest

Sargon II is the program that took on the maxi-computers in the West Coast tournament, and finished in the money! More thinking power than you ever expected in a TRS-80.

Now in stock for immediate delivery!

The Software Exchange

Get the granddaddy of the Adventure Games!
From MicroSoft, the people who wrote BASIC for all the personal computers, comes a version of the original Adventure. NOW, you no longer need aPDP- 10 for all the power of the original game!
This game fills an entire diskette. Endless variety and challenge as you seek to rise to the level of Grand Master (until you gain skill, there are whole areas of the cave that you cannot enter.)
Requires 32K One Disk ONLY $\$ 29.95$ !

## HOW TO SELECT PACKAGED BUSINESS SOFTWARE.

When you are looking tor a Dusiness software package, it is not a simple matter of say. ing "I need an Accounts Recelvable Package" and then buying an accounts receivable package. The ONL.Y way to get a software package to meet all your requirements will normally be io hire a cusiom programmer and have gim write the program to your specifications. For those who do not have several thousand dollars to to this, careifully selected package software can do almosi as well.

Unless you are very lucky, when you buy a packaged program, you will either have to modity your procedures or modity the program to your requirements. Modification is much simpler than witing a program from scratch, and often as saltsfactory.

What do you need to know to buy a package? First, write down the information you need to store and the reports you need. Then obtain a copy of the output reports for the package you are considering. Often you can just rename a category and slore your informatlon directly. Compare the number of accounts you have with the capacily of the system you are considering. 但emember that you might use separate diskettes if you cannot tit all your customers or accounts on one.] Ask if we have a data sheet available for the progratn you are considerling.

We strongly recommend that people purchasing our business software purchase the manual ilrsi. Most of our manuals are avaitable for $10 \%$ of the purchase price plus $\$ 1.00$ shipping. (There is a minimum fee of $\$ 5$ for a maruat., If you later purchase the same program, we will credit you with the ptice of the manusi. Even if you do not buy the program, you will find information In the manual that will help you evaluate other programs or deslign your own, and you will therefore not have wasted your money.
