# APL

## by Phelps Gates

Now a high-level, scientific programming language for the home computer that doesn't cost \$200 or \$300. The power of this language is in its strong mathematical operations, especially with regard to matrices and vectors. Programs requiring matrix multiplication or other matrix problem solving that would require hours of programming time in BASIC are solved quickly and with minimal effort in APL.

To aid in learning APL, lessons are included on the disk. Starting from the basics, you are brought step by step through the various programming techniques involved with APL. These lessons act as a tutor which will have you "talking APL" in no time. Also available is the book, "APL: An Interactive Approach," which reinforces many of the examples given in the lessons and provides additional insight into APL programming.

### FEATURES

APL-80 on disk contains the following features: )SAVE and )LOAD workspace on disk; )COPY other workspaces into current ones; Return to DOS for directory or commands without losing your workspace; Send output to lineprinter; Five workspaces of lessons included; Sequential and random files; 15 digit precision; Monadic and dyadic transposition; Easy editing within FUNCTION lines; Latent expression (FUNCTION can "come up running" when loaded); Tracing of function execution; Real-time clock; User-control of random link; Workspace is 25587 bytes (in 48K machine); Arrays may have up to 63 dimensions.

### COMMANDS APL-80

APL-80 supports the following commands; Absolute value, add, and, assign, branch, catenate, ceiling, chr\$/asc, circular, combinatorial, comment, compress, deal, decode, divide, drop, encode, equal, expand, exponential, factorial, floor, format, grade down, grade up, greater, greater/equal, index generator, indexing, index of, inner product, label, less, less/equal, logarithm, maximum, member, minimum, multiply, nand, negate, nor, not, not equal, or, outer product, peek, poke, quad, quote quad, random, ravel, reciprocal, reduction, reshape, residue, reverse, rotate, scan, shape, sign, system, subtract, take, transposition.

### SPECIFICATIONS

Minimum system requirements: 32K disk system (48K recommended) includes APL-80, Five workshapes of lessons, instruction manual.

Price..... \$39.95 on disk

Reduced feature: 16K Level II tape version, no lessons.  
Transpositions, format, and inner product not implemented. Reduced domain for some functions, 6 digit accuracy.

Price..... \$14.95 on cassette  
APL: An Interactive Approach  
Price..... \$16.95

### LIMITATIONS

Due to the absence of the special APL character set on the TRS-80™, APL-80 uses shifted letters to represent the various APL characters. In addition to the keyboard limitations, lamination, domino, and matrix inverse are not implemented but can be derived with user-defined functions. Multiple specifications must be split into two statements unless the left-hand assignment is to a quad. This also applies to implied multiple specifications. Reduction and reshape (p) are not permitted for empty arguments; the argument of add/drop may not be scalar; empty indices are not permitted. A quad (q) can't be typed in response to a quad (nor can the name of a function which itself gets input from a quad). Quote-quad (m) is permitted. No more than 32 user functions can be defined in a single workspace and a function may not contain more than 255 lines. A comment (c) must occupy a separate line: a comment can't follow a function statement on the same line. In the tape version, arrays are limited to five (5) dimensions.

space and  
the vortices  
of time!**

**RAINWARE PRESENTS...**

# **Time Lord**

The fallen Time Lord, who presumptuously calls himself The Master, is at large. The elders of Waldrom have supplied you with the hyperspace-worthy vessel Tardus, and commissioned you to eliminate the evil "Master". Your resources include clones who will fight for you, the formidable CRASER weapons of the Tardus, and magic weapons such as Fusion Grenades and Borelian Matrix Crystals.

Traveling through hyperspace in search of the evil one, you will encounter Time Eaters, Neutron Storms, and other alien creatures and phenomena. Entering real space to search planets, you will encounter still other dangers. You will enter native settlements to buy food and supplies — or to fight for survival.

And once you find The Master can you destroy him?

GO DESK.

GET TYPEWRITER.

WRITE EDITORIAL.

After a while even the best adventure gets monotonous. Adventure is a nice metaphor, but there is definitely an "if you've seen one, you've seen them all" flavor to it. There are just so many jewel-encrusted eggs or anti-gravity belts one can find before one ceases to be excited by the discovery. While the adventurer will always be thrilled by the puzzle solving aspect of the game, there isn't any real value to the experience other than fleeting satisfaction of an exceptionally transitory nature. So what's left for the hardy adventurer? Arcade games are cute, but they have no substance. Simulations are fun, but they don't really have too much to do with simulating the real world, only with simulating a gross simplification of it. If only there was something in the middle...

There is, of course. I don't really know what you would call it, but there's one in this issue about volcanos. It contains elements of both the Adventure genre and of simulations, and it's quite educational into the bargain. What it does is place the player into a precarious situation based

on a real event, and then challenge the player to get out alive. In the case of the example published in this issue, the situation is that of being camped out on Mt. St. Helen's at the very moment that the top of said mountain parted company with the bottom. Once you figure out how to escape the mountain of doom, you have solved the puzzle and it's time to look for another one. But you have also learned a fair amount about volcanos, and some practical knowledge of what to do when trapped in the middle of an eruption.

If one takes a look at this program, one quickly comes to realize its vast potential as an educational tool. It has elements of the educator's dream: learning as fun. Each program can be tailored to meet the needs of a specific learning level; i.e., young children can learn safety guidelines (such as how to deal with fire, or water safety) and some general science, while adolescents and adults can receive more detailed and comprehensive information about topics of interest. Once the material is assimilated by the user, this knowledge must be used to survive in the game part of the program, thus reinforcing absorption of the information. All in all, a neat package. So where are more of them?

## REWARD! \$ REWARD! \$ REWARD!

We will give away a \$100 software certificate each month for the best translation of a feature program in **SoftSide** magazine. Furthermore, we will publish the translation in the magazine. Your portfolio will be enhanced and you will garner fame and fortune for your efforts!

We will allow three months after initial publication of a program for the translation to be sent. After that time we will not accept entries. The quality of the translation will be judged by the SoftSide editorial staff and the winning entry will be published the following month, i.e., four months after publication of the original program.

Entries must be submitted on cassette or disk, accompanied by documentation and a line listing of the program. Please enclose a self-addressed stamped envelope if you would like your entry returned to you.

# Settle for More from Your TRS-80

**BASIC Compiler.** With TRS-80 BASIC Compiler, your Level II BASIC programs will run at record speeds! Compiled programs execute an average of 3-10 times faster than programs run under Level II. Make extensive use of integer operations, and get speeds 20-30 times faster than the interpreter.

Best of all, BASIC Compiler does it with BASIC, the language you already know. By compiling the same source code that your current BASIC interprets, BASIC Compiler adds speed with a minimum of effort.

And you get more BASIC features to program with, since features of Microsoft's Version 5.0 BASIC Interpreter are included in the package. Features like the WHILE . . . WEND statement, long variable names, variable length records, and the CALL statement make programming easier. An exclusive BASIC Compiler feature lets you call FORTRAN and machine language subroutines much more easily than in Level II.

Simply type in and debug your program as usual, using the BASIC interpreter. Then enter a command line telling the computer what to compile and what options to use.

Voila! Highly optimized, Z-80 machine code that your computer executes in a flash! Run it now or save it for later. Your compiled program can be saved on disk for direct execution every time.

Want to market your programs? Compiled versions are ideal for distribution.\* You distribute only the object code, not the source, so your genius stays fully protected.

BASIC Compiler runs on your TRS-80 Model I with 48K and disk drive. The package includes BASIC Compiler, linking loader and BASIC library with complete documentation. \$195.00.

\*Microsoft royalty information for the sale of programs compiled with BASIC Compiler is available from Microsoft.

## muMATH Symbolic Math System

expands your TRS-80 beyond the limits of numerical evaluation to a much higher level of math sophistication.

Symbolic mathematics is muMATH's power. For the first time, algebra, trigonometry, calculus, integration, differentiation and more can be performed on a system smaller than an IBM 370. And in a fraction of the time you could do them manually.

Yet for all its power, muMATH is simple to use.

To perform a differentiation you could enter: ?DIF (A\*X ↑ 3 + SIN(X ↑ 2),X);

In almost no time, the computer would reply with: @2\*X\*COS(X ↑ 2) + 3\*A\*X ↑ 2.

Or to add fractions: ?1/3 + 5/6 + 2/5 + 3/7;

The instantaneous answer: 419/210.

Or to perform a more difficult trigonometric expansion you enter: SIN(2\*Y)\*(4\*COS(X) ↑ 3 - COS(3\*X) + SIN(Y)\*(COS(X+Y+#PI) - COS(X-Y));

Just a few seconds later, the computer replies: @4\*SIN(Y)\*COS(X)\*COS(Y).

muMATH has virtually infinite precision with full accuracy up to 611 digits.

If you use math, you'll find countless ways to save time and effort with muMATH. It's a professional tool for engineers and scientists. A learning tool for students at any level from algebra to calculus.

And if you want to expand your capabilities even beyond the standard muMATH, the option is open. muSIMP, the programming language in which muMATH is written, is included in the muMATH package. A superset of the language LISP, muSIMP is designed especially for interactive symbolic mathematics and other artificial intelligence applications.

muMATH and muSIMP were written by The Soft Warehouse, Honolulu, Hawaii. Priced at \$74.95, the package includes muMATH, muSIMP and a complete manual. It requires a Model I TRS-80 with 32K and single disk. muMATH for the Apple II Computer will be available later this year.

INTRODUCING THE HOTTEST "FIX-IT" BOOK YET!

## "TRS-80 DISK and OTHER MYSTERIES"

by Harvard C. Pennington

Here it is . . . THE complete "disk reference manual" for your TRS-80!  
 An excellent manual and tutor for beginners and professionals alike.

Reveals all — in plain everyday English: How to recover lost files; hash codes; killed files; clobbered directories; bad parity errors; gat and hit errors; unreadable directories; direct statement in file errors; Electric Pencil errors and lost pencil files; and electrically or physically damaged disks. Recover from a DOS error 22 in pencil, make BASIC programs unlistable, recover over-written files, read or edit any BASIC program with Electric Pencil, and remove product status. Tells how to use Superzap . . . and the list goes on and on. Large 8½" x 11" easy-to-read format. Over 130 pages. Order Today!

Apparat, Inc.  
introduces

# NEWDOS 80

For the 80's —  
an enhanced NEWDOS  
for your TRS-80™  
Model 1.

## NEWDOS/80

Brand new from Apparat, their most powerful DOS ever. EVERYTHING in NEWDOS and NEWDOS+ and more: Variable length records (up to 4095 bytes), mix or match your disk drives: 35, 40 and 77 track drives can be used in any combination — even with 8 inch drives, new security boot-up sequence makes it impossible for the unauthorized to BREAK or LIST. "DOS READY" and "READY" need never appear, enhanced RENUMBER allows relocation of subroutines, powerful program CHAINing, option to PRINT on display and printer simultaneously, execute DOS commands — from DOS — without disturbing your resident BASIC program. Put the "DOS of the Eighties" to work for you. Documentation included.

S-80 32K Disk ..... \$149.95

## NEWDOS

NEWDOS corrects over 70 errors and omissions in TRSDOS 2.1 and disk BASIC, yet they are completely compatible! Programs SAVED under either system need no modification to work with the other. Like going from Level I to Level II: more power, convenience and speed. Use all DOS commands (DIR, FREE, RENAME, COPY etc.) from BASIC, AUTO LOAD and RUN a BASIC program from power-up, produce variable and constant cross reference tables, OPEN "E" to add to the end of a sequential file, send whatever is on the screen to your printer, even in DOS (great for DIR), renumber BASIC programs, and more. Fully documented.

35-Track version S-80 32K Disk ..... \$49.95  
40-Track version #11-05 S-80 32K Disk ..... \$55.00

## NEWDOS +

ALL of the above PLUS: Editor/Assembler for disk, Z-80 Disassembler, LMOFFSET to relocate and save SYSTEM tapes to disk, Level I BASIC language with disk I/O, DIRCHECK to check and LIST disk directory, SUPERZAP-display/print/modify any location in RAM or on disk (worth the price of the entire package when you resurrect that accidentally KILLED file!). NEWDOS+ on disk with documentation.

35 Track version S-80 32K Disk ..... \$99.95  
40-Track version #11-07 S-80 32K Disk ..... \$110.00

# Tiny Comp

## The Lazy Man's Shortcut to Machine Language!

A BASIC Compiler in BASIC!  
Run your source program in BASIC, compile it into FAST Z-80 Code and execute the compiled version — all without reloading. 26 integer variables, GOTO, GOSUB, END, REM, RND, LET, +, \*, /, IF, THEN, =, INKEY\$, CLS, PRINT@, CHR\$, PEEK, POKE. Compiled programs may be saved via TAPEDISK.

Supplied with game program, "3-D TIC TAC TOE", which uses all of the TINY COMP statement set and is ready to compile.

Manual includes several sample programs as well as thorough documentation of the Compiler for those who like to know "how things work" and for those who might even wish to EXPAND on TINY COMP's capabilities.

16K, S-80 Cassette ..... \$19.95  
32K, S-80, Disk ..... \$24.95

# INPUT

Dear **SoftSide**:

Just received the August 1980 issue and tried out the "Protour 80" golf game, on page 34. Worked fine and embellished it with a tid-bit. Inserted line 9417 PRINT@640,

".....!.....!.....!  
.....!.....!"

This prints a ' scale under the 'Green' and makes it easier to gauge the 'units' necessary to putt, by judging each '.' to be two feet.

ALSO....

Added:

8148 PRINT @ 586,

"WOODS(1-4)=260-200 YARDS"

8149 PRINT @ 650,

"IRONS(1-9)=200-90 YARDS"

8150 PRINT @ 714,

"WEDGE.....=70-30 YARDS"

These lines fill in the blank space under the SCOREBOARD after each hole to remind players of the ranges.

9734 Change PRINT @128 to 127

(This presents a better symmetry to the direction logo.

Jos. F. Dineen  
Pocasset, MA

Dear **SoftSide**:

I was pleased to see my article published in the December 1980 issue. However, regarding the illustration, I would like you to know that there will be an investigation to see how you gained your information to base it on. I believe that the use of wire taps and hidden cameras is an invasion of privacy, and there is no other way you could have so accurately portrayed my home.

## SoftSide™ INPUT POLICY

**SoftSide** Magazine welcomes your comments and thoughts on both the magazine and the field of microcomputing. We try to publish as many of our readers' letters each issue as we can.

For the sake of clarity and legibility, all letters should be typewritten and double-spaced.

Send your letters to:  
SoftSide Publications,  
Input  
6 South St.,  
Milford, N.H. 03055

We reserve the right to edit any letters prior to publication.

I would like to inform you though, of a discrepancy in the portrayal. The dog your camera saw under my dining table was only a visitor. He is not a permanent resident of the madhouse you saw. He belongs in the madhouse across the street and was just visiting here with my children. I had hoped he could keep them occupied long enough for me to get "In Search of Dr. Livingston" keyed into the computer. I was interrupted by the phone when the police called to say that my garbage can had been stolen and would I please come down to the station to identify the trash.

Needless to say, I never got the program typed in, nor did I get the chicken in the crock pot, and the kids had to do without their sandwiches.

Seriously, I love the illustration. Please give my regards and a hearty 'thnx a lot' to your artist, Annie.

Sincerely,  
Sherry M. Taylor  
Author of "What to do  
While the Program  
Loads"  
Haines City, FL

Dear **SoftSide**,

I will make only a short mention of the fact that I had originally sent in my subscription with the idea in mind that I would be getting a publication solely devoted Atari programs. I can live with what I got, however. One thing I would like to complain about, though, is the program listings (for Atari at least). I find that the dot matrix printer that you people use for program listings is difficult to read. Especially so when these listings are reduced in size, when I find that some punctuation marks practically disappear. I can appreciate the need to cram a lot of information in a small space and hence the reduced size printing of the program. However, I noticed that Hardside sells the NEC Spinwriter and other letter-quality printers. I would like to suggest that you people use such a printer for the listings that are reproduced in your magazine. I will state again that the dot matrix print DOES NOT reproduce well.

Yours truly,  
Michael A. Ivins  
Las Vegas, NV

Dear **SoftSide**,

Here is an open letter to computer software authors, publishers and users: Negative editorializing and software locks have not eliminated pirating, only made it more challenging, driven it underground, and given some people added thrills. Let's try a positive suggestion.

The vast majority of software pirating is apparently of arcade-style games and "adventures". I suggest that these very popular types of programs not be copy protected, but that they include user instructions on the original distribution media and that instructions for copying to disk and tape be included. These special PIRATABLE programs should also be sold at the lowest possible cost (certainly no more than \$10 + cost of the medium). You'll entice and hold more computer users that way, anyway.

But wait! who pays the piper — i.e. authors? The ADVERTISING sponsors, that's who! Work with, not against the free enterprise system. Incorporate commercial messages within the program so that each time it is run, you are exposed to the sponsors' words. The brief ads could range from gaudy Hi-Res, full color billboards to low key use of his product for variable and location names.

Bury the advertising in data statements and machine code, if you wish. That would make it difficult enough to remove that most users wouldn't bother. The dedicated cryptographer could still have his fun, but it might be more profitable to exercise these skills in writing more of the sponsored programs.

Don't limit the sponsors to computer or electronics hobbyist businesses. Computer users tend to be better educated, to have a higher income level and to be more progressive than the population as a whole. That's exactly the market advertisers are looking for. Sell microwave ovens, VCRs, and new cars. Even soap and paper diapers!

Imagine a simulation road race with bonuses for contributions to the national economy and penalties for exhaust emissions, sponsored by the National Commission to Reduce Oil Imports, of course! Or how about a

# OUTGOING MAIL

war game in which the successful production of a nutritious food supply must accompany the weapons supply? Let the National Farmers Alliance sponsor that one. A snowmobile race over an obstacle course? Sponsored by Ski-Doo!

Another idea. Push the games on the back of breakfast cereal boxes. For \$3 + three boxtops you could order a game tape for your home computer permitting you to play the role of the Ceres Kid in his struggle against the forces of evil! Younger sib could guide his cockatoo through a maze in a search for the froot droops. Change to a rabbit looking for chocolate mothballs.

Now you have the idea. Let's use the system, not fight it!

Very truly yours,  
C.E. Walker  
Lincoln, NE

Dear **SoftSide**,

I am delighted about Scott Adams' new column in **SoftSide**. The debounce patch will be much appreciated.

My main frustration with the adventures is saving and loading games to and from cassette. I don't mind hanging from flag poles or jumping out of space ships, but wrestling with a cassette player at 2:00 a.m. is too much to ask of even the most ardent adventurer. I have transferred my adventure programs to disk, so loading the programs is a breeze. Is it possible to patch them so that games in progress could be saved to disk instead of cassette?

I realize that these are large programs and there may not be enough room in 16K to implement such a change, but there are plenty of disk users with 48K. Besides, we've been trained to expect miracles by our adventures. Maybe, if I say YOHO...

David A. Kater  
La Mesa, CA

Dear **SoftSide**:

Just a brief note to wish you and all of **SoftSide**'s softhearted women a very merry Christmas and a most happy and prosperous New Year!! And to let you know that the first copy of the **SoftSide** subscription that you entered for me had arrived (the November issue). Today the tape arrived and I've just finished "splattering" Bouncing Barney for the umpteenth time. The magazine is great and the tape is great! We'll be putting all of them to good use during the coming year.

The new format for **SoftSide** is super and I'm sure all of your readers will appreciate the new clarity it presents.

Thanks again and have a bright and happy holiday season.

Gottfried R. Von Kronenberger  
Represa, CA

Dear **SoftSide**,

The "TEXT COMMAND GRAPHICS" in the "Meteor Storm" program (November issue), is an interesting feature. Your readers might be interested in adding sound effects, if they have not already done so, by adding the code listed below.

Sincerely,  
Don Kahler  
Washington, D.C.

Dear **SoftSide**,

The author of "Mad Scientist" (November 1980 **SoftSide**) is not Thomas Hamlin III, but Thomas Hanlin III.

I was somewhat amused to find the credit for my programming efforts given to a fictitious individual. I didn't find it quite as funny when the mistake appeared a second time, written on my cheque!

Please straighten out your records. I would appreciate correction of the error under "Bugs, Worms, and Other Undesirables", or wherever you deem appropriate.

Sincerely,  
Thomas Hanlin III  
Springfield, VA

Editor's Reply: Oops!

INPUT continued on page 19

It took only 10 years from the time President Kennedy launched the space program until men were walking on the surface of the moon. With the launch of the space shuttle scheduled for April we find ourselves on the edge of a new era. And this promises to be an even more amazing era than the last.

The space program offered us many things. From microwave ovens to microcomputers. This magazine itself, is an indirect by-product of the space program. More than the advancement in technology, the space program offered us a final frontier. When the Apollo program finished, we lost that horizon. With the development of the shuttle, we now have a new horizon, a new place to examine, a new place to learn from.

While discussing new horizons, I guess it's appropriate to tell you about my departure from **SoftSide**. This will be my last Outgoing Mail. I am relocating to Florida to

finish school and continuing my efforts in writing software. I plan to remain active in the software industry and continue to attend the national computer shows, so maybe someday we will cross paths again.

Besides, who could give up an opportunity to be there when the launch of the space shuttle signals the start of the second space age.

*Phillip*

# EXPAND YOUR COMPUTING CAPABILITIES

## ST80 SMART TERMINAL PACKAGE

All four programs include the ability to use an unmodified TRS-80™ keyboard to produce RUB, ESC, and other control characters for time sharing, software control of the RS-232-C board, repeat key, bell, software support for the three most common upper/lower case hardware conversion, and line printer output.

### ST80\* UC

Preset parity, word length, and baud rate (regardless of switch settings on the RS-232-C board) for THE SOURCE, MICRONET, and FORUM 80, automatic testing of the RS-232-C board, and even spooling of prepared messages on tape directly into FORUM 80 using a basic program supplied as a line listing. 4K Mod I/Mod III cassette ..... \$24.95

### ST80\*

Reprogram your RS-232-C board from the keyboard, and run at different baud rates. Note: does not have auto testing of the RS-232-C or tape spooling. 4K Level II cassette ..... \$49.95

### ST80\* D

Connection time clock, option of user-created translation tables for keyboard, gathering and pre-formatting data to be sent directly from disk to host computer, spooling of received files to disk or printer, editing of received files, and auto logon. Use it with VTOS 3.1, and get device-driven I/O, job logging, and chaining. 32K disk program ..... \$79.95

### ST80\* III

ST-80 D with extra utility programs. 32K disk program ..... \$150.00

## THE SOURCE

Would you like to send mail across the country overnight, write one letter and send it to a hundred people, read the news right off the wire service, program in COBOL, FORTRAN, or RPG II, advertise on a nationwide electronic bulletin board, join a real time national computer club, leave messages when you are out of town, make travel arrangements through your computer, use a discount shopping service, reach a whole library of specialized information on business, real estate, science and engineering, and personal applications, find out what the weather is around the country, and use dozens of high-powered applications programs?

Connect your microcomputer to THE SOURCE! THE SOURCE is a bank of mainframe computers in McLean, Virginia connected by TYMNET and TELEMET data transmission services to hundreds of cities around the country. Most urban areas can access THE SOURCE by local phone call.

#### Costs:

One time subscription fee (includes manuals) .....	\$100.00
Connect time after midnight (per hour) .....	\$2.75
Connect time between 6 p.m. and midnight (per hour) .....	\$4.25
Connect time 8 a.m. to 6 p.m. (per hour) .....	\$15.00

# ABOUT THIS ISSUE

Look! Up in the sky, it's a bird . . . it's a plane, no it's (cough, cough) an ash cloud. And it's headed your way! Just turn to page 36 and you'll discover a volcano, the canonized one from the Pacific Northwest, to be precise. Everything you ever wanted to know about pyroclastic flows in one simple program. How can you resist? How can you survive? Only one way to answer both questions . . .

If finding your way off the mountain of doom is not your cup o' tea, howzabout a little strategy thinking to take your mind off of mundane woes? For S-80 and Apple users we present "Strategy Strike", courtesy of David Steenson, Rich Bouchard, and the newest of our editorial wizards, Jon Voskuil. "Strategy Strike" is based on a board game of skill and military perspicacity. Not unlike chess, "Strategy Strike" should test your abilities as a tactician

to their utmost.

And speaking of that Voskuil fellow, he has graced our pages with a sporting event of digital significance, a true trial for all of you mathletes out there: "Math Decathlon". We understand that not only will this thrilling software package help you to learn your ciphers, but it may enhance your approach to programming as well. Of course we munchkins have our ciphers down pat . . . we learned to cipher gasoline out of automobiles by means of a rubber hose back when we were in high school.

For your Atari buffs we have a special treat this month: How to make your Atari smarter without paying full price. Send it to night school. If that doesn't work, try reading Paul Johnson's article in this issue. Your Atari won't grow a trunk and tusks, but it'll remember more than it used to.

That penguin fellow from out

Illinois way tackles making the incomprehensible at least palatable; if you've ever contemplated taking a claw hammer to your computer, don't bother . . . Mark already has. See "Kansas" for details, and we do mean DETAILS.

For all you flag-wavers, the inimitable Morris & Cope team from the frozen tundra of Canada has graced us with an educational game of flag identification. It only works on the Atari this month, but hang in there you Appleheads. We'll have a version for you fellows next month.

Plus we have reviews, some of that YOHO stuff, hardware and software tips courtesy of ol' Granite Knoggin hisself. And the SoftSide Continuing Data Base does that for the last time . . . it continues. So do we . . . next month. 'Til then, a merry munchkin farewell. Yoho, and we gone!

## THE ATARI ASSEMBLER EDITOR

Atari's Assembler Editor allows you to talk to your computer in its native language — Machine Language.

Assembly Language programming offers you faster running programs and the ability to tailor programs to your exact needs. The Assembler Editor is actually three programs — an Edit program, Assembler program, and a Debugger.

With the Edit program you can have automatic numbering, renumbering, delete, find, and replace. Programs can also be stored and recalled using ENTER; LIST and SAVE; and LOAD. The Edit program also helps you put programming statements in a form the Assembler program understands.

The Assembler program then takes the program statements you create in the Edit program and converts them to machine code.

The Debug program is a monitor, tracer, disassembler, and mini-assembler.

This ROM cartridge interfaces directly with your operating system or disk operating system to save memory by avoiding repeating code.

Atari Cartridge . . . . . \$59.95

# I DON'T THINK WE'RE

# IN KANSAS ANYMORE . . .

by Mark Pelczarski

Since this really isn't an editorial anymore, I'm struck with the freedom or not having to try to editorialize each month. I imagine I'll still ramble on about one thing or another occasionally, but I plan to divert most of my attention here to investigating what's really in this box on which I'm typing (and other boxes much like it). I remember a lot of the curiosities and confusion I had when I was first learning to program and I looked inside the big cabinet-sized IBM and DEC computers, and when little tiny microcomputers appeared, smaller than the video terminals to the large computers. I'd be lying if I said that much of my curiosity and confusion doesn't remain. Hopefully, I'll strike some balance between simple and complicated. It's very easy to get the feeling that you're over the heads of half your readers and insulting the intelligence of the rest. Maybe someday I'll even write a column that will be of interest to those who consider Operating System listings light reading.

Now let's see, what's in here? I'll pull the top of this Apple and look. (Careful. Sometimes if I jostle it too much the memory glitches and I lose all the text stored inside.) Well, as most of you have seen before, there's mostly a big green board with dozens of sockets filled with Integrated Circuit chips (ICs)

There's also a big power supply in here that takes the AC current (is 'Alternating Current current' considered redundant?) and changes it to DC at a lower voltage. Everything's got power supplies though (even food processors); the interesting parts are all these chips. They come in various sizes. There's a relative giant in the back (at about 2" in length). That's the 6502 microprocessor (not much different from a Z-80 microprocessor on the outside). That one is basically the

computer, where all the action happens, believe it or not. It used to take an entire cabinet itself.

There are also six larger chips near the microprocessor (about 1 1/4" long) marked 'ROM'. Those are Read Only Memory chips, meaning you can't erase the programs stored on them by writing over them; you can only read and run those programs. Yes, those are only programs in there.

Someone wrote them, figured that they were worth saving, and instead of storing them in conventional memory, stored them in this indestructible memory for our permanent enjoyment. Good thing too, since BASIC itself is one of the programs stored on these chips. So is the monitor — the program that figures out what to do when the power is turned on and remembers where the screen, keyboard, and other useful devices are and what to do with them.

Early computers and microcomputers didn't have these programs built in, so you had to deal directly with the CPU (Central Processing Unit — which is what the microprocessor chip now is). That gets tedious. But the thing to remember is that BASIC and the monitor are just programs, much like the ones you can write. That's why on the Atari computers you can plug in and unplug languages the same way you can with the "Star Raiders" and "Basketball" programs. The languages are programs.

There's another larger IC hiding under the keyboard here. It's a ROM that contains all the information needed to display characters on the screen. For each character code it tells which dots should be turned on and off to make it look like something, hence it's called a character generator.

Most of the other chips in here look the same. They're only about 3/4" long and less than 1/4" wide.

The microprocessor has 40 pins that plug into its socket, the ROMs have 24 each, but these little ones only have 16. Although the small ones aren't all the same, about a half of them are the memory chips — RAM. RAM stands for Random Access Memory, meaning that these are the ones on which you can read AND write. There are 24 in here, and since they together give 48K of memory, each must hold 2K, or 2048 bytes (1K = 1024 bytes which is 2 to the 10th power). You find lots of powers of 2 in computers, which ultimately boils down to the fact that electronically everything is stored in one of two states: on or off — actually high or low. Each thing that can store one of these highs or lows is called a bit, short for Binary digIT, binary being the base 2 counting system. Anyway, since a byte is 8 bits (2 to the 3rd), each of these memory chips holds 16384 bits. There are a lot of these RAM chips in the computer, so let's take one out and see exactly what one of these bits look like.

Instead of pulling one out of the Apple, I'll get one out of the Atari so I don't destroy what I'm writing. Although Atari likes to seal up everything, I fortunately have a memory expansion board for it made by another company that has all the ICs exposed. I'll pull one out and draw a little picture of it down in Figure 1 so you can see what I'm talking about. It's got 16 pins, as I mentioned earlier, but the rest of it seems rather well encased in this

**FIGURE 1**  
**BEFORE**

black plastic. It's not going to be very easy to dissect. There's nowhere to pry it apart; I'll

probably have to use a claw hammer. Put it on this cinder block here and give it a whap.

Okay, we've got it cracked open. Lost a few pins in the process, but I can now see the inside. I'll sketch it out in Figure 2. There's not much inside. From each of the pins (and ex-pins) there's a little hairline wire leading toward the center of the chip, and in the center there's a tiny little silver square. As I measure it, it's less

FIGURE 2  
AFTER

than 1/16". On the other side of the ruler it looks like it's close to 1mm. Very small. Apparently, the only reason the IC itself is so big is to accommodate the pins. Maybe that's the reason the microprocessor is so large, comparatively. More pins. The surface of the silver dot is not smooth; there are little patterns on it, but they're not readily discernible. Can't really see much more.

After a few investigative phone calls it's apparent that the dot is the actual circuit, made through a type of photographic process on a silicon-coated surface. It is made so that light will eat away portions of the surface, thus imprinting the desired circuit on the chip. The desired pattern is sketched out, then reduced photographically and transferred to the chip in a way similar to how photographic paper is exposed to a negative to create an image. The only size limit is the resolution that the light and silicon can attain. I still wonder how they attach those little wires to it that go to the pins, though.

It's difficult to put smashed chips back together, so I don't advise trying it. Next month we turn back the clock to the infamous FOO-9 error, and what it could possibly have to do with FOOD and BEEF, and for that matter, an interesting CODE.

## Exciting Entertaining Software for the Apple II and Apple II Plus!

## ASTEROIDS IN SPACE

If you liked "Invaders," you'll love ASTEROIDS IN SPACE by Bruce Wallace. Your space ship is traveling in the middle of a shower of asteroids. Blast the asteroids with lasers, but beware - big asteroids fragment into smaller asteroids! The Apple game paddles allow you to rotate your space ship, fire its laser gun, and give it thrust to propel it through endless space. From time to time you will encounter an alien space ship whose mission is to destroy you, so you'd better destroy it first! High resolution graphics and sound effects add to the arcade-like excitement that this program generates. Runs on any Apple II with at least 32K and one disk drive. On diskette - \$19.95

### WEB International

#### TSHORT+

The popular "Tshort" has been expanded into "Tshort+" — the most powerful Level II and DOS shorthand program ever written.

"Tshort+" has 41 preprogrammed statement keys, 11 KUSTOM keys, and four EXPRESS keys. Includes automatic keyboard debounce and lowercase driver. "Tshort+" has KEYBEEP which allows your TBEEP to respond with a short blip each time you press a key. Comes with complete set of decals for your keyboard.

The cassette version includes Level II and single drive DOS. The disk version is on a formatted diskette — DOS only — and requires two or more drives.

S-80, 16K Cassette .....	\$19.95
S-80, 32K, Disk .....	\$24.95

#### SAVAGE ISLAND

This is the newest of the Scott Adams' Adventure series. A small island in a remote ocean holds an awesome secret. Will you be the first to uncover it?

Note: This is the first part of a larger multi-part Adventure. It will be necessary to purchase additional packages to complete the Adventure.

S-80 Models 1 and 3, 16K, Cassette .....	\$14.95
S-80 Models 1 and 3, 32K, Disk .....	\$20.95
Apple II, 16K Tape to Disk .....	\$14.95
Apple II 32K, Disk .....	\$20.95

#### MISSILE ATTACK

This real-time game (with sound effects) pits your twin silos of ABMs against a barrage of enemy missiles trying to destroy your cities. As your skill increases so does the difficulty of this game. Watch the skies and may your aim be true.

S-80 Models 1 and 3, 16K, Cassette .....	\$14.95
S-80 Models 1 and 3, 32K, Disk .....	\$20.95

#### Z-CHESS III

"Z-Chess" is one of the fastest, most versatile chess opponents available for your S-80. With its seven levels of play, up to six levels of "Lookahead", and its ability to accept and play all standard chess moves including castling and en passant captures, it is truly a challenge for both beginning and advanced players. It can play either white or black and its versatile board setup mode allows specific positions to be played as desired. "Z-Chess" will also quickly solve mate-in-two problems.

S-80 Model 1, 16K, Cassette .....	\$24.95
S-80 Model 1, 32K, Disk .....	\$29.95

#### MAXI MICRO MANAGER

"Maxi Micro Manager" supports six different relational search techniques. It comes with a programmer's interface and over 93 pages of documentation. It supports up to 20 user-defined fields and its record length is up to 800 characters. This program's files can be up to four disks in length and it is compatible with 35, 40, 77, and 80 track drives.

It is compatible with NEWDOS 2.1. A NEWDOS 80 version is available for \$10 after initial purchase.

S-80 Models 1 and 3, 48K Disk .....	\$99.95
-------------------------------------	---------

## The Comsoft Group

#### ENHBAS

"ENHBAS" is an Enhanced BASIC extension module which loads at the top of BASIC adding many commands and background tasks including SORT, a multi-keying, multi-tagging array sort; JNAME, which uses line labels along with line numbers in branching statements; and WHILE/WEND, a new structured programming loop construct. Functions include EVAL, which evaluates an algebraic expression in string form; and EXEC which executes a string expression as if it were a BASIC program line.

Model I version contains vector graphics and drawing commands.

S-80 Models 1 and 3, 16K Cassette .....	\$59.95
S-80 Models 1 and 3, 32K Disk .....	\$59.95

# ZORK™

Zork™ is a computer fantasy of ultimate challenge. Unearthly creatures guard treasures beyond your imagination. Mazes confound your quest. So quicken your wits and pick your path carefully through the Great Underground Empire. The least likely object may be the only thing that can save your life.

Yet, you can succeed. Discover the 20 treasures of Zork, return them to the Trophy Case and leave alive. But bring all the cunning and courage you can muster. Because in Zork, they take no prisoners . .

Zork, The Great Underground Empire, was created by Infocom, Inc., and is available for 32K Apple II and II Plus and 32K S-80 Model I Level II disk systems. . . . . \$39.95

# Adventure

BY Scott Adams

Adventure by Scott Adams is like no other program you have ever seen! Inspired by the large Adventure program found on big computers in the last few years, it will run on your 16K Home Computer! This is one game you will NOT master in an hour and then lose interest in! Adventure is a machine language program using all 16K of your computer.

0.† **"SPECIAL SAMPLER"** - Never tried Adventure? This special inexpensive sampler complete with 3 Treasures is a cut-down version of our large Adventureland. Guaranteed to supply hours of enjoyment: Try an Adventure today!

1.† **ADVENTURELAND** - You wander through an enchanted world trying to recover the 13 lost treasures. You'll encounter wild animals, magical beings, and many other perils and puzzles. Can you rescue the Blue Ox?

2.† **PIRATE'S ADVENTURE** - "Yo ho ho and a bottle of rum..." You'll meet up with the pirate and his daffy bird along with many strange sights as you attempt to go from your London flat to Treasure Island. Can you recover Long John Silver's lost treasures?

3. **MISSION IMPOSSIBLE ADVENTURE** - Good morning, your mission is to ... and so it starts. Will you be able to complete your mission in time? Or is the world's first automated nuclear reactor doomed? This one's well named. It's hard, there is no magic, but plenty of suspense. Good luck. . . .

4. **VOODOO CASTLE** - Count Cristo has had a fiendish curse put on him by his enemies. There he lies, with you his only hope. Will you be able to rescue him or is he forever doomed? Beware the Voodoo Man. . . .

5. **THE COUNT** - You wake up in a large brass bed in a castle somewhere in Transylvania. Who are you, what are you doing here, and WHY did the postman deliver a bottle of blood? You'll love this Adventure, in fact, you might say it's Love at First Byte. . . .

6. **STRANGE ODYSSEY** - Marooned at the edge of the galaxy, you've stumbled on the ruins of an ancient alien civilization complete with fabulous treasures and un-earthly technologies. Can you collect the treasures and return or will you end up marooned forever? . . .

7. **MYSTERY FUN HOUSE** - Can you find your way completely through the strangest Fun House in existence, or will you always be kicked out when the park closes? . . .

8. **PYRAMID OF DOOM** - An Egyptian Treasure Hunt leads you into the dark recesses of a recently uncovered Pyramid. Will you recover all the treasures or more likely will you join its denizens for that long eternal sleep? . . .

9. **GHOST TOWN** - Explore a deserted western mining town in search of 13 treasures. From rattlesnakes to runaway horses, this Adventure's got them all! Just remember, Pardner, they don't call them Ghost Towns for nothin'. (Also includes new bonus scoring system!)

10. **SAVAGE ISLAND** - A small island in a remote ocean holds an awesome secret. Will you be the first to uncover it? SAVAGE ISLAND is the first part of a larger, multi-part Adventure. It will be necessary to purchase additional packages to complete the entire Adventure. Cassettes for S-80 Model I or III, and Apple II. . . . \$14.95  
Disk for S-80 Model I or Apple II, (3 Adventures per disk, specify 1-3, 4-6, or 7-9) . . . . \$39.95  
Adventures 1-9 on a single S-80 Model II Disk . . . . \$99.95

# subLOGIC

The FS1 Flight Simulator from subLOGIC combines fine graphics and accurate flight characteristics to give you a real time simulator on a home computer. The instrument panel contains all the instruments required under part 91 of the Federal Aviation Regulations for visual flight. On top of that, the FS1 includes a stall warning, turn indicator, radar map, bomb and ammo indicators, and control position indicators.

Included in the package is British Ace 30 Aerial Battle, a program that permits you, after gaining enough confidence, to take on enemy planes and try to wipe out a fuel depot.

# SAY YOHO

by Scott Adams

This month we'll cover a minor bug in the Apple cassette versions of my Adventures and briefly discuss how I write an Adventure.

For quite some time I've been getting calls from Apple owners having problems saving a game to tape and then later restoring it. I've tried the tapes myself and never seem to have a problem, so I just assumed that it was a problem in the tape players the people had been using. Well, just recently I got a phone call that shed some further light on this problem.

The caller informed us that his problem in loading a saved game on the Apple II only occurred AFTER he had turned the computer off and then restarted it at a later date. This indeed was shown to be the case. It appears that this problem is caused because the save-game routine sets up some I/O pointers which are required by the restore game subroutine.

A simple procedure to overcome this problem is:

Before restoring a save-game tape you must initialize the program by first creating a save-game. This needs to be done only one time after loading the program

tape — thereafter the save-game tapes will load with no problem until the machine is shut off again. Procedure:

- 1) Turn on Apple.
- 2) Load Adventure tape.
- 3) Answer "NO" to restore question.
- 4) Type "SAVE GAME".
- 5) Answer "TAPE" to tape or disk question.
- 6) Hit RETURN without putting a tape in the tape player.
- 7) When program returns, type "QUIT".
- 8) Answer "YES" to restore question and load in your save-game tape now. Saved games will now load normally until you shut your Apple off.

I have been asked many times how I develop an Adventure. Well, my usual procedure is as follows:

- 1) First I pick a topic that I want to cover, such as Dracula or the Old West.
- 2) Then I decide whether I want to do a treasure expedition or have some specific mission to perform. (The treasure-finding type of Adventure is usually easier to write, but not by a lot.)
- 3) Next I lay out some terrain to

cover and put in a simple skeleton of problems and obstacles to overcome. Also I dot the landscape with obvious items and objects which belong there, such as coconuts in palm trees, etc.

- 4) By this time, I usually have some interesting problems laid out which I then incorporate into the structure.
- 5) At this point I'm usually ready to enter the structure into the computer and start play-testing. The Adventure is probably about 50 percent of its final size at this time.
- 6) Finally, the play-testing by myself and others gives me numerous ideas of how to fill in the holes in the final structure and an Adventure is born!

How long this process takes ranges from one year, in the case of "Adventureland", to only one week for "Mystery Fun House". On the average, an Adventure will take about a month to finish, and anywhere from three hours to three months to play!

I hope this has given you some insight into Adventure creating. Until next month, may all your adventures be fun and safe. 

INPUT continued from page 9

Dear **SoftSide**:

I wanted to take a moment to tell you how much I enjoy reading your magazine. I own an Atari 800 40K RAM, disk drive and 825 printer. Each month I anxiously await the arrival of this month's edition. Please keep up your fine coverage of the Atari machines and software. I'm looking forward to even better coverage in the future.

Included is a short program idea that in certain circumstances may save a great deal of typing. When I'm writing programs, on some occasions I want results printed to the screen and on the other occasions printed to the printer. I have to type everything twice just to change the command from PRINT to LPRINT. With this short program added on many occasions, I just capture the information from the screen and print it to the printer.

Garry J. Patton, M.D.  
Romulus, NY

**Editor's Note:** Here is the program and our Apple Translation from Mark Pelczarski.

## ATARI

```
10 OPEN #1,4,0, "S:":OPEN
#2,4,0, "K:"
20 DIM A$(40),B$(40)
30 ? "THE FIRST TIME THROUGH

Camarillo, CA 

# COMPUTER SCIENCE PRESS

## **MORE CHESS AND COMPUTERS: THE MICROCOMPUTER REVOLUTION THE CHALLENGE MATCH**

**David Levy and Monroe Newborn**

By the year 2000 the world chess champion may be a computer! Chess playing computer programs have improved over the past ten years to the point where a computer has even won a game with a grandmaster. This book details the exciting events in the field since 1975, including a description of the microcomputer revolution and its impact on computer chess, and the Challenge Match between David Levy and the world champion program. \$12.95, ISBN 0-914894-07-2.

## **CHESS AND COMPUTERS**

**David Levy**

This is the first really comprehensive book on Computer Chess. It describes the earliest chess "machine", the famous Automaton chess player that toured Europe and America, and gives a detailed account of Torres y Quevado's invention that played the ending of king and rook against king. Following this is a lucid description of how computers play chess, a detailed history of computer chess, an account of early Soviet attempts at chess programming, a record of computer chess tournaments, plus much, much more. *Paper, \$9.95, ISBN 0-914894-02-1. Cloth, \$14.95, ISBN 0-914894-03-X.*

# MATH DECATHLON

by Jon Voskuil

## Part 1

Welcome to the Olympics!

This series of four articles has two purposes. One is to develop a fun and educational math game program with some Olympic flavor to it, and the other is to learn good programming techniques along the way. Of course, if you're not really interested in the programming part, you can always (sigh) just skip the erudite exposition which follows and start entering the program itself.

The programming is in Applesoft, but is readily adaptable to other versions of BASIC; translation notes will be included along the way. The complete program will need a 24K machine, although it could be compacted into 16K by eliminating the music routines and most of the instructions.

"Math Decathlon" consists of ten math "events" which can be played on three different skill levels by as many as four contestants. Each contestant represents one of four countries in the competition, and those countries' national songs are used to honor winning players (athletes?). Incidentally, if you should have occasion to use the program with a larger group, such as a school classroom, it works very well to have four teams competing.

This first article covers the initialization and instructions, the scoreboard and several other subroutines, and the first two events, "Find the Missing Number" and "Guess a Number."  
**INITIALIZATION AND INSTRUCTIONS**

Line 5 sends control immediately to line 300, bypassing several small subroutines. Frequently-used routines are often placed early in the program like this because they execute faster — the computer spends less time finding their line numbers each time they are called. Speed is not at all important in this particular case, but I just thought I'd put them here anyway! We'll get back to these routines as they're called from the main program.

Line 300 dimensions all the variables to be used (some of which won't be showing up until later installments of the program). Note that the "%" symbol in the variable array "P%" makes it an integer array. This has two beneficial results. First, less memory is used to store the array values — two bytes per element rather than five. And second, since this is the array that contains the players' scores, an integer array assures that they will always be whole numbers and won't mess up the scoreboard with decimal points.

Lines 310-340 assign values to various strings which are used to label the events and the scoreboard. Be especially careful to type in the correct number of spaces in B\$ and C\$ (six between each character), or the scoreboard will be mangled.

The title page and instructions are printed beginning in line 360. [Translation note: HOME is the command that clears the screen, and VTAB moves the printing position down from the top of the screen to the specified line.] If the instructions are requested, they are printed one page at a time in digestible portions. Between each page is a call to subroutine 100, which prints a prompting message at the bottom of the screen and waits for the user to press a key before continuing. This could be accomplished with a GET command as well as with the PEEK method used, but the GET leaves a blinking cursor on the screen which I wanted to avoid. [Translation notes: POKE-16368,0 clears the keyboard strobe so that the next character can be read in. PEEK (-16384) reads the keyboard, and if the value returned is greater than 127 then a key has been pressed. INVERSE causes the text printed to be black-on-white rather than the NORMAL white-on-black]. Line 120 checks to see if the key pressed was the ESC, and if so sets NXT = 1: this will shortly be explained.

Following the instructions, in lines 480-560 the players are asked for information, each part of which is inputted as a string and checked for legitimacy before

continuing. This is always good programming practice, and prevents messy "??RE-ENTER" messages and program crashes. Lines 570-630 shorten players' names to six characters if necessary and format them for the scoreboard display, following which the games are officially opened.

Each of the ten events which make up the main part of the program begins at a brand-new, fresh, multiple-of-1000 line number. And each runs through the same few steps at the beginning of the event: The variable E is set equal to the event number, the variable NXT is zeroed, and a loop is set up to repeat the event for each player. Then, for each player the event title is printed (in subroutine 10), the instructions for that event are given, and control jumps to subroutine 90 where a personal prompt is given and the computer awaits a keystroke to continue. Here's where the "ESC" key comes into play: If it is pressed at this point, then NXT is assigned a value of 1; and if NXT is non-zero when control returns to line 1040 (hmm...a dreaded number this time of year), then this event is skipped entirely and execution continues with the next event.

### Event #1: FIND THE MISSING NUMBER

Event #1, challenges you to find the pattern in series of numbers, and supply the missing value. There are three levels of difficulty (as with every event), and on each level there are three types of series from which the computer may choose. It does so at random, presenting to each player three problems which are each worth ten points. At skill level 0, the missing number of the six is always the last; at levels 1 and 2 it is randomly selected. (I assure you that the suggestive name assigned to this missing number, line 1120, was purely unintentional.) [Translation note: To Applesoft RND(1) generates a decimal number greater than or equal to zero, and less than one. Thus the expression INT (RND(1) \* 3) + 1

continued on next page

delivers an integer between one and three inclusive.]

When the player inputs an answer in line 1120 (again as a string, to trap bad input), the variables PX and A2 are assigned values and then subroutine 30 is called. This subroutine processes the player's input and responds with the appropriate remark. It compares A2, which now contains the correct answer, with the value of AN\$, the player's input. If correct, it prints a nice message and adds PX number of points to the score; if incorrect, it expresses its sympathy and gives the right answer. By the way, I've embedded one CTRL-G (beep) in the "SORRY" message, and two of them in the "THAT'S RIGHT" message, to add a little audio reinforcement. Subroutine 30 having done its job, control returns to line 1130, where subroutine 100 is again called to print a prompt and wait for a keystroke to continue.

### THE SCOREBOARD

After all this has been done three times for each player, line 1140 calls the scoreboard subroutine which begins at line 11000. This is simply a printing routine which displays each player's score in each event. [Translation notes: HTAB positions the cursor at the specified printing position along the line (1-40). SPC(n) (in a PRINT statement) prints n blank spaces.] The only tricky thing here is found in lines 11070 and 11210 where I use an expression such as HTAB 8 + P\*7 + (P%(P,I)<10). The expression in parentheses evaluates as one if true, and zero if false. Thus if P% is less than ten, the value for HTAB is increased by one, and the score is printed one space further to the right so that digits will line up properly.

### Event #2: GUESS A NUMBER

Following the scoreboard display, control passes on to the next event beginning in line 2000. The same preliminaries are followed as with the first event, and then the event actually begins at line 2080. The code is pretty straightforward here — picking a random integer, inputting a guess, subtracting a point for a wrong guess, giving "too high" or "too low" feedback, and returning for another guess. Since the scoring of this event works differently than in

the first, the "standard" scoring subroutine at line 30 is not used. Again, there is a CTRL-G embedded in the string printed in line 2180, and two of them in line 2150, for audio reinforcement.

For now, the program ends at line 3000, following the display of the scoreboard. Contrary to the claims of the introductory instructions, there are only TWO events, and NO music yet exists to tickle the ear and stimulate patriotic fervor. But if I gave you all that this month, what would I have to give you for the next three issues?

Next month: The music routines and the next two events.

### Math Decathlon Variables:

- A1, AN: Value of an answer input.
- AN\$: Answer input string.
- A2: Value of correct answer.
- A\$, B\$, C\$: Strings to construct scoreboard.
- C(p): Player p's country.
- E: Event number.
- EE\$(n): Title of event n for scoreboard.
- EE\$(n): Full title of event n.
- INCR: Increment for generating series in event #1.
- LIM: Upper limit for no. guess.
- NAME\$(p): Player p's name for scoreboard.
- NP: Number of players.
- NUM: Number chosen to guess in event #2.
- NUM(n): (Not yet used).
- NXT: Logical variable (see text).
- P: Player number.
- P%(p,e): Score for player p for event e.
- PL\$(p): Player p's full name.
- PX: Point value for scoring.
- S(p): Skill level for player p.
- SE(n): Series elements for event #1.
- SQ(n): (Not yet used)
- X: Position of unknown series element.
- XS: General input variable.

### NEW! SUPER APPLE BASIC (Lutus)

A structured BASIC that compiles into an optimized Applesoft or Integer BASIC program. Line numbers are not required, and the program can be written in individual modules and then linked together. Features labelled subroutines, jumps, and the use of variable games of up to 10 characters.  
32K, Apple II Disk, \$39.95

### NEW! APPLE ASSEMBLY LANGUAGE DEVELOPMENT SYSTEM:

**An Assembler/Editor/Formatter (Lutus)**

Write and modify your language programs quickly and easily. Features a cursor-based editor, global and local labels, and disk-based macros which allow you to incorporate frequently used subroutines into any program.  
32K, Apple II Disk, \$39.95

# BASIC PERSONIFIED

by Roger W. Robitaille, Sr.

It is the goal of this article to attempt a new approach to explain how and why these wondrous things called computers function the way they do. Any of you readers who have participated in a Dungeons and Dragons (D&D) campaign will recognize and appreciate (I hope), how a fantasy culture can take on meaning and give understanding to the real world.

If you take the time to recall how often an idea can become clear once compared in some way to another already familiar idea, an appreciation of the power of analogy should come to you. If all goes well, the following pseudo world of BASE will start to take shape with problems and solutions strangely similar to the operation of a microcomputer. Wish me luck, and please be forgiving if consistency, at times, seems chimerical.

The world where BASE exists is a very busy world, and a very structured and orderly one. The Processor allows only one action to occur at a time. All is in harmony. From a human perspective, BASE is boring. It is bureaucracy that is so unyielding that any initiative on the part of an individual element other than the Processor can quickly lead to chaos. Obviously, deviant behavior is discouraged.

The world of BASE is content. Elements never willfully misinform

and can be completely relied on to at least attempt to do the bidding of the Processor.

**Character Clarification:**

The Processor is known to humankind as CPU. Some of the more common species are the Z80s, 6502s, LSI-11s, etc.

Elements are essentially addresses. Most elements are RAM, some may be ROM. An important few are whole devices which all respond to the Processor as if they were RAM or ROM. The Processor has no favorites and responds to them all the same way. An address is an address.

With authority goes responsibility. The role of the Processor is a central one. The whole world of BASE revolves around the abilities of the Processor. However, the Processor is a driven creature. Its life is like that of a Queen Bee. Its role is special and unique, but preset from birth to respond in specific ways to certain situations — no choices, no real prerogatives. The Processor may lead the band but it doesn't select the music.

You might wonder just what a Processor does: simple things really, the building blocks of significant activity. It is as if the Processor has the only adding machine in town. As a matter of fact that's true! It adds two elements together. It will compare two elements to see if there is any difference between them. It will check a part of an element to see if it is a 1 or a 0. It can sense the value of any element and duplicate

it in one of its internal adding machines. It will even read the sum of two consecutive elements and use that as the address of its next work assignment.

**Perspective:** Looking at the individual instructions that drive the Processor for the meaning of a program is like looking at a brick for an understanding of a building, or, more to the point, individual letters for the meaning of writing. It's the combination and sequence that separate meaning from chaos, a building from rubble, and writing from gibberish.

So what is all this about addresses? Well, most Processors in microcomputing are 8-bit types. More than that, they are provided with 16 address lines. Be that as it may, those address lines are used by the Processor to select exactly which byte it wants to read (or write). With 16 address lines, the Processor can distinguish among over 65,000 different elements (bytes, devices, etc.). For you doubters, ask your computer to PRINT 2 to the power of 16.

The awareness level of the Processor is inferior to that of a bureaucrat processing your driver's license renewal form. All it knows is how to set 16 solid state switches and read a bank of eight lights to execute the process dictated by those lights. Nothing more — nothing less.

The language, be it BASIC, FORTRAN, or whatever, is far more representative of the power of the computer. But that's another article for another day.

## BUGS, WORMS,

## and other undesirables

The following lines should be added to the S-80 program "Squish 3" which was published in the December **SoftSide**.

```
335 IFA>0THENT=T+D:D=1:T1=INSTR(T,A$,"");IFT1<T+7ANDT1>0THENT
    =T1:GOTO330

FROM

# MUSE SUPER TEXT II...

**Language of Super-Text II software** — 6502 Assembly . . . gives extremely fast editing response.

**Program Disk Protection** — A backup copy of the program disk is provided.

**Text Creation and Editing Features** — Super-Text II includes a character-oriented, floating cursor edit with Add, Change, Math, Print and Preview modes. Among the standard features retained from the original Super-Text are:

- single key cursor control
- automatic word overflow
- character, word, and line insertion
- forward and backward scrolling
- automatic on-screen tabbing
- automatic paragraph indentation
- character, word, and line deletion
- ditto key
- single key for entering "the"
- block copy, save and delete
- advanced file-handling
- global (multi-file) search and replace
- column decimal alignment
- left and right justification of columns
- automatic user-positioned page numbering
- chapter relative page numbering
- complete printer tab controls in text files
- line centering
- superscripting and subscripting
- on-screen lower case with MUSE Data Shift Lower Case Adapter (Paymar also supported)
- shift key modification compatible
- Split-Screen allows the user to view and edit two portions of a file simultaneously.
- Math Mode provides a built-in 15 digit floating point calculator which performs on-screen calculations, column totals and verified numeric data in statistical documents.

Trade in your old word processor for Super Text II and receive the following credits: Documentation and proof of purchase must be included with return.

Super Text — \$100 credit  
Apple Writer — \$50 credit  
P.I.E. — \$50 credit  
Easy Writer — \$50 credit

**Length and Linkage of Files** — Maximum file size equals 20,049 characters. Automatic file linkage (Autolink) provides unlimited file size when doing find, find and replace, and preview or printing operations.

**Page Preview Provided** — Yes. Preview mode allows viewing a file exactly as it would print for inspection of page breaks and text formatting. The preview mode carries through AutoLink operations allowing inspection of extremely large documents.

**Text Capacity of Screen** — 23 lines by 40 characters.

**Storage of Text on Disk** — Manually at any time, automatically during AutoLink.

**File Backup** — Dual disk copy program is included on the program disk. Files may also be loaded and saved on a blank disk individually.

**Automatic Pagination and Page Numbering Features** — Page breaks are automatic based upon number of lines per page and may be forced at any point using a control character in the text file. Page numbering is automatic but may be suppressed. Location of the page number is user selectable. Chapter relative page numbering is also provided.

**Printers Supported** — Any printer which will interface with an Apple computer.

**Right Justification Technique** — Provided by variable between word spacing.

**Special Printing Features Available** — Features include: underline, boldface, superscript, subscript. Other special printer features, including multiple character fonts, may be defined by the user.

**On-screen Display of Special Printer Function** — Inverse characters are displayed on the screen to indicate special features. These control characters are not displayed in preview mode.

**Control Characters** — All printer control characters are inverse so there is no conflict with printable characters. However, a user may define any printer control sequence.

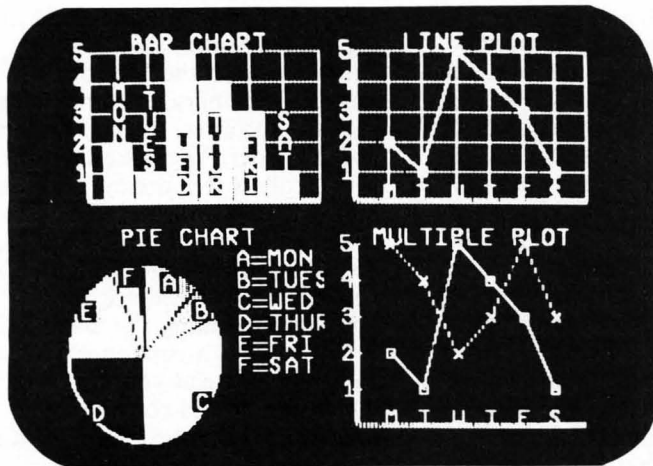

Apple II and Apple II + 48K Disk ..... \$150.00

# TWO NEW ONES FOR THE APPLE II® OR II plus®

## ABM

Invader and Asteroids move over... ABM has arrived! Command your launch sites to fire 1 and 5 kiloton anti-ballistic missiles (ABMs). Save the East Coast from increasingly fierce Enemy nuclear attack. Position your target crosshairs to blast the green streamers before they fire-ball your cities—or worse—split into multiple warhead MIRVs turning the entire coast into a thundering specter of destruction. Hi-res color graphics, sound, high score to date memory, paddle or joystick control. On disk, requires Applesoft ROM. (\$24.95)

## DATA PLOT

Easy editing features allow you to create and modify a wide variety of full color graphic representations of numerical information. Bar charts, including additive bars, as well as single and multiple line charts may be plotted individually or cumulatively. Pie charts are easily sliced. All figures may be output to a graphics printer or saved as hi-res "pictures" for dramatic full color recall as visual aids during presentations. Basic statistics are displayed automatically. On disk, requires 48 k and Applesoft ROM. (\$59.95)

## Getting a Bit Serious-Part 2

### WHERE THE NUMBERS COME FROM

In Part 1 of this series, I talked about margins and other numbers commonly used in business. There's nothing magical about these numbers. They are the results of experience. Here's where they came from.

The other day, I was visiting a man who is retired now but used to own a plumbing business. We got to talking about the cost of renting office space. He seemed to remember a book he had somewhere and started hunting for it. The book he found was not on plumbing or computers but on opening a men's clothing store in a shopping mall. Out of curiosity, I began to look through it and found all kinds of interesting information. There were tables which told you how much merchandise you had to sell based on some specific profit margin and a cost per square foot for rent. There were other places that discussed the kind of terms you could expect to get from various wholesalers, banks, landlords, etc. You know, it's really too bad I'm not planning on opening a men's store in a shopping mall.

There are numerous government and private agencies which have books like that for all kinds of businesses. All of this information comes from experience. This information is important not only to help people succeed, but also to help other people judge your success. When other people can judge your success, you stand a better chance of getting access to money.

When a new industry gets started, like the microcomputer industry, you don't have this information. So, it is more likely that these new businesses will fail. And those that do survive will have a harder time attracting capital. Given the lack of good information, the businesses in a new industry must rely on the best information available about similar industries or industries in general. One good example is the turnover rate.

The turnover rate is the number

of times per year you turn over your inventory. This figure can vary greatly from one industry to another. The skiing industry turns over their inventory once a year. A&P turns over their inventory once a month.

The general rule of thumb is that you use a 100% mark up if you make one turn per year, as the skiing industry does. This works out to be a profit margin of 50%. If you make two turns per year, i.e., turn your inventory over twice a year, then your mark up is 50% or roughly a 33% margin. When you get down to 12 turns per year, your mark up is in the neighborhood of 10%.

Even this simple little piece of information about business tells us an awful lot. Look at the Mom and Pop grocery store and compare their turnover rate with any of the big food chains. All other things being equal, you can immediately see why Mom and Pop have got to charge more for their groceries.

Using this rule of thumb, we can work backwards and see that if we buy hardware on a 30% margin then we have got to turn over our inventory twice a year. With software, we have to turn over our inventory slightly less than twice a year. If your business is that of being a distributor working on a 10% margin, then you've got to turn over your inventory 12 times a year. But then, a distributor has got to move a lot of merchandise quickly to make a living.

The microcomputer industry has started to settle down to these margins pretty much because it turns out that that's the way things happen. If the figures get changed, say to a 20% margin, it simply means you must turn your inventory over a lot quicker. One way to do this is to sell more products to deplete the inventory faster. Another way is to reduce the size of the inventory.

There is, however, nothing magical about these numbers. They merely dictate a level of performance. Those who make the grade stay in school; those who don't flunk out. To live on a 20% margin instead of the usual 30% margin you must choose from one of the two options above.

Maybe you're a really good salesman. Maybe nobody can walk away from you without taking home a TRS-80™ Model II. If that's a description of you, you might very well be able to live on a 20% margin and get rich.

More than likely, the average computer salesman isn't that good. Clipped down to a 20% margin, he must reduce his inventory. The result is that products are much more likely to be out of stock.

### THE COST OF MAKING THE SALE

Just because you can get the right margins does not mean you're going to make any money. Other factors must also be considered. One of the biggest is the cost of making the sale.

Part of the cost of many of the things we buy is incurred in getting us to buy these products in the first place. One example of this is McDonald's. In 1980, McDonald's spent \$140,000,000 on television advertising to convince each of us that we deserve a break today. That works out to 64 cents for every man, woman, and child in the United States. But there is another side to the McDonald's story. The hungry customer comes in ready to order, in fact, he can't wait to order. You take the order, fill it, collect the money, and send him off. It is a rare McDonald's customer who will insist on inspecting the meat before it's cooked, or who will ask for assistance in eating the meal.

Not so with a computer customer. Instead you must talk to the customer and convince him that he could make good use of a computer in his business which currently is doing just fine without one. Then, you must convince him to buy the kind of computer you sell. Finally, you must convince him not to buy it somewhere else. All of this takes time and money. And it is all in addition to those expenses, like advertising, that got the customer into your store in the first place.

Obviously, you can not afford to spend a lot of time trying to sell a \$15.00 product. But, if the margins are right, the higher the price, the more time you can spend with the customer. Let's take an example.

Suppose you own a computer store and you sell two types of computers. One is the ABC-800 which sells for \$800.00 and the other is the XYZ-1000 which sells for \$1000.00. Chances are the XYZ-1000 will sell much better than the ABC-800.

In the first place, you would rather sell XYZ-1000s because you make more money on them. Second, since you do make more money with them, you will tend to spend more time demonstrating the XYZ-1000 than the ABC-800. Third, since it is priced higher, it will appear to the customer that it is a better machine until the customer has reason to believe that it isn't. Fourth, the manufacturer of the XYZ-1000 is making more money so is more likely to give your computer store better terms than the manufacturer of the ABC-800. Since the manufacturer of the XYZ-1000 is making money, chances are he's making a better product and can spend more on advertising, making his computer easier to sell.

If the manufacturer of the ABC-800 priced that computer at \$800.00 to try to compete on a price basis, then he is the one who comes out on the short end of the stick. He makes less, computer stores make less effort to sell his product, and he ends up selling fewer of them than if he competed on the basis of quality rather than price.

Of course, the whole situation gets turned around if the ABC-800 is as good as the XYZ-1000 but cost less to make, thus, making it less expensive to sell. In that case, while you may not make as much money selling ABC-800 computers, their lower profit is offset by the fact that they are easier to sell simply because they cost less.

The real problem is that people learned the simple rule of supply and demand. According to the rule, the lower the price, the greater the demand. The trouble is that it is a simple rule and things just aren't that simple. While it is possible to compete on a price basis, you've got to know what you're doing.

### **THE MAIL ORDER BUSINESS**

Another way to sell products is through the mail. Although this has many advantages compared to over-the-counter sales, it also has some drawbacks.

One of the big advantages of mail-order is the fact that if only

1% of your customer base does business with you, you're going to be swamped.

Another advantage of mail-order is the fact that it is efficient. All of the time spent by employees is devoted to money making activities — order taking, order filling, and billing. Almost no time is spent trying to generate business which may not pan out.

A good computer salesman must be fairly well paid. He has to understand the various machines sold in his store, how to operate these machines, and how various pieces of software work. Not only must this salesman be well-qualified when he come bursting through the door looking for a job, you will probably have to spend a fair amount of time training him on all of the stuff you sell.

The mail-order house doesn't have this problem. Most of their help will not require much training beyond learning how to do their job. So, your labor costs are lower. Let me give you an example of this:

My own mail-order business is primarily done by telephone. Rather than pay a bunch of people to answer the telephone 24 hours a day, I have an answering service doing this for me. Thus, I have no scheduling problems, no wages to pay, no training problems. I pay \$75.00 a month and somebody else answers the phones and takes the orders.

Who are these people? They're the women at The Message Center here in Burlington, Vermont. Talk about ignorant. I probably shouldn't tell you this but they don't even know what an S-80 is! They think an Apple is something you eat and an Atari is the name of a planet in *Star Wars*. Yet, they are perfectly capable of taking your order and filling it, thanks to a very nice order form which makes them sound a little intelligent.

To further reduce costs, a mail-order operation does not need to have any expensive storefront, although many do. The storefront space upstairs from my office (I'm located in a small shopping center) runs about \$12 per foot per year. I'm paying \$8 per foot per year. Just for comparison, a shopping mall (50 stores under an enclosed roof) might get from \$20 to \$25 a square foot per year.

Another advantage to mail-order

is that you don't have to be located in the big city. This further reduces your rent and may offer you the convenience of an office next to your home. In my own case, my house is two and a half blocks from my office — about a ten minute walk.

Of course, if the rent is still too high and you're just starting out, you can run a mail-order business out of your house. A spare bedroom or a cellar can do just fine. You really can't do that with the over-the-counter trade.

On the other side of the coin, while it's true you don't have to pay any high-priced salesmen, that cost is replaced by high-priced advertising. The cost of a full page ad in most of the big computer magazines usually runs around \$1000. This does not include the cost of getting camera-ready copy made, which is another several hundred dollars.

The second drawback is that people would prefer to buy over-the-counter from a person they know, rather than a stranger on the telephone who might very well be an answering service operator. There are two ways to overcome this resistance.

First, you will probably have to discount your price, or at least make it look like it's discounted. You know, sometimes, after you pay postage and handling, it might turn out to be more expensive.

Second, a toll-free 800 number helps also. These numbers are not free, however. Nothing from the telephone company is. WATS telephone service is billed by the hour just like any long distance call. Generally, on a national WATS line, the cost is about \$18 per hour. Some people seem to think you can buy unlimited service with WATS so you can talk all you want for just a flat monthly fee. WRONG!!! There is no such thing. The average 800 WATS line call for a mail order product is about a dollar.

Next, you have to figure that you're going to get clipped three to four percent on your money because a lot of mail-order and almost all phone-order stuff is done by credit card. While it's true that over-the-counter sales can also involve a credit card, more often than not these are cash transactions.

The final drawback to mail-order also turns out to be one of

continued on next page

continued from previous page

its advantages. A retail computer store usually does not have a lot of competition to worry about. I have yet to hear of a city that has 80 computer stores all located within a few blocks of each other. In mail-order, your advertising is your storefront and it's inches away from many other store fronts trying to sell the same products as you.

## THE DEVELOPER

Taken as a group, most of the people reading this are probably never going to get into the marketing and retailing end of the computer business. Statistically, the part of the market you, the reader, are most likely to brush up against is development work.

There isn't a single thing in the room with you right at this very moment that didn't start as an idea in somebody's head. Somehow, that idea was expressed as a product which was then manufactured and retailed and finally bought by you. The business of coming up with ideas and turning them into a marketable product is called development.

Development takes on two forms in the computer business — hardware and software. For the moment, I'll discuss both at the same time since they have a lot in common.

From a business standpoint, development work is the worst area to be in. The reason is that it is extremely cash forward with a high investment risk.

To take an example, I'll use the Model II version of "Deluxe Personal Finance." The first step was to get a S-80 Model II and then decide what to do with it. After looking over the needs of the market, several programs were identified and "DPF" was one of them. So that I could devote my time to other projects, Diane Bernard, who works for me part-time, was given the task of converting the Model I version of "Deluxe Personal Finance" over to the Model II TRSDOS operating system.

Diane began her work in March of 1980. First, she had to learn the program as well as the Model II TRSDOS operating system and the use of Microsoft's "BASIC Compiler." Then she had to do all of the conversion work, which was made much more complicated by

some of the poor Model II TRSDOS protocols. The final version was completed and tested around the end of June 1980. By the middle of July the master disk was sent to Small Business Systems Group for manufacture and distribution.

By the time they were able to review the program, determine what changes needed to be made to the instruction manual, and begin production, it was December 1980. Part of the delay was due to the fact that SBSG was working on the "VTOS 4.0" manual which took a longer than usual amount of time. But there were other things which delayed the "DPF" manual, one of which was the new "ST80-III" manual. No matter. It seems to take forever to get a good manual and have it printed.

Now, in January, some dealers finally begin to hear that "Deluxe Personal Finance" is available for the Model II TRSDOS. Orders are placed but on 30 day net. So money does not even start to come in until February, 1981, and I receive my royalty check in March, 1981 — one year after the project was started.

Thus, money was spent for various expenses, especially labor, that I will not get back until one year later. Worse than that, I might not get all of my money back. Maybe the program won't sell very well. But it all boils down to this — it takes a lot of money which can be invested for a long period of time to do development work.

The amount of money that needs to be invested to develop a computer program varies greatly. Programs like "Electric Pencil", "ST80-III", or "Visicalc" represent investments of from \$20,000 to \$40,000. How many people do you know who have that kind of money to invest for a year or two? Probably not very many. Of the few people who do have big dollars like that around, most would rather invest in established business ventures than pursue a high-risk investment in a computer program.

If the program is a totally new concept, the investment costs become even higher while, at the same time, the risk also increases. How did Personal Software know that "Visicalc" would be a useful program? They didn't. Personal Software thought that such a program could be written and that

it PROBABLY would be a useful program. The only way to really know is it to invest the money to write it and then hope that it turns out as well as you expected.

The high-risk factor coupled with a large investment in comparison to the size of the marketplace, often results in poorly-developed or under-developed software which must then be put out on the marketplace before it's ready, so that cash starts coming back. This is why there is so much junk software out today. Many software developers simply don't have enough money to sit on a product until it's really ready.

There are ways to deal with this problem. One method is the approach that was used to develop "ST80" terminal programs.

The first "ST80" terminal program was only a terminal program. Being much smaller, it took less time and less money to develop. But, when it was put out on the market, it was well-developed.

Then, with the original "ST80" program out there starting to generate income, that money was used to finance "ST80-D". The beauty of this is that part of the development work for "ST80-D" was already done. So, all of the efforts were put into extending the capabilities of the program. What was not known was how flexible "ST80-D" would be. How many different time-sharing environments would it be able to handle? There was no way of knowing that without writing the program. "ST80-D" was written to cover most of the common time-sharing environments. When work was completed, "ST80-D" went on the market.

Now, I had two terminal programs out there — each generating income. This put me in an excellent position to continue my work. On the one hand, I had proven that this new market existed and that my software would work. On the other hand, I saw additional possibilities for extending the features of "ST80." Using the feedback I was getting from the field, it seemed to me that I could now make yet another "ST80" that would work with any time-sharing computer. Small Business Systems Group also believed that there was a need for a very powerful "it-always-works" terminal program and hired me to

write "ST80-III". But this time, I received an advance, thus, totally eliminating any further need to invest more of my money and eliminating the risk factor.

Using my experience with the "ST80-D" code, I avoided, for the second time, the need to reinvent the wheel. Adding those things which were shortcomings to "ST80-D" in certain situations, "ST80-III" went out to the marketplace about one year after the original "ST80" first appeared.

"ST80" is a perfect example of how you can develop a product successfully with a low initial investment. It also had several other advantages. First, it tested the market to see if it was really there and how big it was. You've got to remember that at the time the original "ST80" came out, almost nobody had ever heard of MicroNET, the SOURCE, or FORUM 80. Second, it resulted in a vertical product line starting with a low-priced small program up to a high priced deluxe package. Vertical product lines are a lot more appealing to retailers than single product lines.

Hardware manufacturers do have one advantage over software authors: People with money see the computer industry as a rapid growth market. Hardware is something people understand. So, hardware people have a much easier time attracting venture capital than software authors do. As a result, hardware products are usually better developed and a vertical product line can be created much more rapidly.

I'll tell you a true story. I went to my bank to try to get a line of credit. Naturally, the bank wanted to know what Lance Micklus, Inc. did. When I told them my company developed computer programs, they didn't know what I was talking about. They never heard of an "ST80" or "Star Trek III". If I had said that I manufactured computer EQUIPMENT, they would have lit up like a Christmas tree even if they didn't have the foggiest idea what that equipment did. The solution was for me to give them some sample products. Specifically, I gave them an "ST80-III" for the Model II, a "Star Trek III" and "Mean Checkers Machine" from Adventureland, and an SBSG version of "Deluxe Personal

Finance". Now the bank had something they could hold in their hand. I had something I could point to and say that it was my company's product. As a result, the loan was approved in a few days.

The amount of good software needed to supply the needs of all of these little computers greatly exceeds the output of the professional people who are in the business. Fortunately for our industry, there is another way software products can be developed without the need for very much investment capital at all. Instead of using expensive professional help, the work is done by amateurs. Some very excellent programs have been written this way and some very famous people have launched their computer careers as a result.

Since the amateur developer usually invests his time in return for the reward of seeing his idea work, anything else beyond that is profit. In fact, the amateur developer may spend more time developing his pet project than the project is financially worth in terms of dollars per hour. But, for him, that's not an obstacle.

There is one serious drawback to this. Money controls people. When people need money, they do what other people want them to do. That's why you get up at 6:30 in the morning to go to work even though you'd rather sleep in. If you can't control somebody by using money as a carrot, what do you do?

Since the amateur developer is not in this business for money, the professional people he must do business with have no way to control him. If a fix is needed, you can only hope that the fix will come out of pride for a job well done.

Another problem with amateur developers is their lack of resources. As I set here right now, I am within ten feet of a TRS-80™ Model II, Model III with disk drives, a Model II without disk drives, Color Computer, Pocket Computer, a TRS-80™ Model I tape system, and of course a Model I disk drive system with "Scripsit" which is being used to write this series. If someone comes to me and says that they need to fix one of my programs so it will work on a Model III as well as a Model I, I don't have a problem. The amateur program developer does because the chances are that he only has one computer.

For a computer manufacturer like Radio Shack, the difficulties in obtaining good quality vendor products, especially software, pose a major problem. To solve this problem, Radio Shack often obtains the services of outside vendors and pays for the entire development cost. The vendor is thus given the money to do the job with no risk. So long as he delivers what Radio Shack ordered, he is guaranteed payment.

On the other side of the coin, Radio Shack must carefully price these software products. If they price them too low, other outside vendors will not be able to compete and all further development work in that area will stop. Not only is this bad for the microcomputer market as a whole, it could also lead to an anti-trust suit.

#### THE DOLLAR CONNECTION

Not including this last section, this article has mentioned the word MONEY 28 times. That's got to tell you something. The microcomputer industry, like any other industry, is driven by money. I don't know anyone in this business who is in it to get rich. But every professional I know in this business is in it to stay in business.

# DEVELOPING DATA BASE

Part 7 — The Final Chapter  
by Mark Pelczarski

S-80 and Atari translations by Rich  
Bouchard

For Apple, S-80, or Atari

This will be the last installment of "Data Base" to be published in **SoftSide**. As such, it's about time to look at what we already have and see how it might be improved. Most of the modifications this month are rather system-specific in their solutions, so I'll start by outlining the types of changes and applying them to the Apple. Then Rich can take his turn with specific S-80 and Atari solutions. Bear in mind that while "Data Base" ends with this issue, there are many more enhancements that can be made. If you are interested in additions to the series send a postcard with your name and address to:

Mark Pelczarski  
1206 Kings Circle  
West Chicago, Illinois 60185

## DISK ERRORS

One of the most flagrant programming violations we've made in the name of keeping the program simple was to omit any error-checking in the disk routines. This can cause some frustration; for example, when you try to save a file and get a DISK FULL message, your program bombs, and your data is left in shambles. Each system has slightly different error-trapping techniques, but it is possible to modify each version so that errors are caught and you are allowed second chances.

The Apple has a statement called ONERR-GOTO that sends program control to a specific line if any subsequent error occurs. One product of this statement is that normal error handling routines in BASIC are bypassed, however, so sometimes you want to use it, and sometimes you don't. An example of an existing error routine that ONERR will override is the one that prints "?REENTER" when you type a character where a number was expected. That's a nice routine for the computer to handle instead of your program. To turn off the

ONERR condition, you must use the statement POKE 216,0. One other result of the ONERR statement is that if an error occurs, any FOR-NEXT or GOSUB-RETURN situations in progress are messed up. The stack that contains the necessary addresses for the NEXT and RETURN is modified, so you can't jump back into the program normally. This will be reflected in our changes.

If you look through the Apple modifications, you'll find four places in the program where disk access was made: reading and writing the data file, and reading and writing format files. In the load subroutine at 1000, an ONERR statement is placed at 1010, just before the disk file is opened. If the filename specified is not on the disk, the ONERR condition will send the program to line 1310, which prints the "FILE NOT FOUND" message, waits for a keypress, undoes to ONERR setting, and goes back to the original question at line 110. The write subroutine similarly has an ONERR statement before the file is opened that sends program control to line 2290 if there is a problem. That line prints the "DISK ERROR" message, waits for a keypress, then goes back to the master menu at line 200. Line 200 contains the necessary POKE that disables ONERR. Then down to the format subroutine at line 10000, a similar pair of statements occurs at lines 10090 and 10170 if a format was not found on disk while attempting a READ. The last pair, when writing a format file, is slightly different, since if you were sent back to the master menu you'd lose the format you had just entered. Instead, the message is printed and the program is told to GOSUB 10400, reentering the subroutine for another attempt at writing the file.

## DISK DIRECTORY

In scanning through those changes, you probably noticed another set of changes in the same disk routines. These are the result of a suggestion from M.R. Dunn, editor of the **A.C.E. Newsletter** (Atari Computer Enthusiasts), in

Eugene, Oregon. The suggestion was to allow the user to get a disk directory of data files from the program. On the Atari version we can ask for a directory of filenames that have certain characteristics. On the Apple, we just do an entire CATALOG, but to give more information we've added extensions to our filenames to identify what they are. Data files will appear in the catalog as NAME, DAT, the ".DAT" being added by the program in the 1000 and 2000 subroutines. Format files will appear as NAME, FMT, with the ".FMT" being added in the 10000 subroutine. The user still uses 'NAME', but now the catalog will identify what's what. Lines 270, 380, and 600 add the catalog option. One note here: When you make these changes, you'll also have to rename your existing disk data and format files before you can use them. On the Apple, use the command:

```
RENAME name, name. DAT  
or  
RENAME name, name. FMT
```

## FREE SPACE

Starting to get a little concerned over RAM space and how many items you can actually fit in your data base, we put in line 295, which prints the number of bytes of free memory each time the master menu is listed. This number should be taken loosely, because the values of other miscellaneous strings we use will affect the amount of free space. That's why I subtracted 50 as a rough margin of error. Loading a long format file will wipe out as many characters as the length of the format, so be careful of that, too.

The FRE(0) function not only returns the amount of free space, it also does whatever housecleaning is necessary to compute that value. As a result, the more data that is stored, the longer it takes to compute this number. Some of you might want to move line 295 down to a subroutine around line 700 if the pause gets too long. Change line 295 so it prints the choice "(F) FREE SPACE", and add a line around 390 that says IF A\$ = "F" THEN GOSUB 700. I personally

like to see that number automatically, keeping a constant reminder on the screen if I'm running short of room.

Another line added for the sake of this function is 6135, which blanks out the last item if one has been deleted. If this isn't done, the deletion won't be reflected in the free space, since the last item will still be pointing at some data, even though it's ignored.

The variable MX is also tied to the amount of space available, and while Rich had the foresight in the Atari version to tie the length of the monster data string to memory space, for simplicity's sake I arbitrarily set MX, the maximum number of items, to 100. With a 48K Apple there are about 27,000 bytes (characters) available, which roughly leaves 270 characters per record. Increasing MX to 200 takes more room for pointers and leaves about 26,000 bytes, or 130 characters per record. You can, and should, set MX to a value consistent with what you think your AVERAGE record length will be. The 130 cited above is an average, since a record may be longer than 130 as long as there are others shorter than 130 to balance it. You may also change MX at anytime, as long as you don't set it smaller than the number of records in the file you're using. To make this easier, lines 1110 and 1550, which were duplicate definitions of MX, have been deleted and MX=200 has been moved to line 101.

### LOADING ANOTHER FILE

The last change is from a suggestion from Jim Winkler in Alameda, CA. Among other things, he suggested the capability of loading a new file without having to rerun the program. This also adds a quick and easy way to expand your data file beyond RAM by keeping portions on disk. If your file's getting too large, delete the last half, store the first half under a new name, reload the original file, delete the first half, and store the remainder. Now you have two files, and although it's not terribly convenient switching back and forth, you do have a brute force method of enlarging your file capabilities.

There is a new command at 280, and 400 is changed so that both 'Q' and 'N' are included. In either case, the save switch is checked to

prevent accidentally leaving an unsaved file. If 'new file' was chosen (line 540) the CLEAR statement resets all variables, and the program restarts at line 100.

### S-80 CHANGES

A note for the S-80 version of "Data Base" for this month: The "FILE NAMES" feature will only function under certain types of DOS, due to the use of the CMD "DIR" function to get a disk directory. The technique works on NEWDOS and VTOS, but does not work with TRSDOS. If you do not have a DOS with this capability, delete the function by erasing lines 270, 380 and 600.

# VOLCANO

by Victor T. Albino

**“Volcano” is an S-80 educational adventure game requiring at least 16K memory.**

As one of the snow-capped jewels of Washington’s Cascade Range, Mount St. Helens ruled with majestic silence for 123 years. Then on Sunday, May 18, 1980 at 8:32 a.m., it erupted in a mammoth fury which paralyzed much of the Pacific Northwest.

Seventy people died as a result of the volcano. Hundreds of

square miles of virgin timberland were blasted into a lifeless, gray moonscape. Massive mudflows caused widespread destruction many miles from the volcanic site.

Despite these elements and the odds, almost 200 people were saved from the mountain by brave crews in rescue helicopters. This program, based on actual eyewitness accounts, recreates the experiences related by these survivors.

If you had been one of those present near the mountain that

Sunday morning, would you have managed to survive?

Load this program and find out!

Volcano Variables:

D: Contains the number representing your decision of “what to do next”.

D\$: Contains yes or no reply to “try again?” routine.

M, X, Y: Miscellaneous. Used for display positioning.

P: Contains the string: “HIT ‘/’ KEY”.

T: Used in time delay loops.

# creative computing

***"The beat covered by Creative Computing is one of the most important, explosive and fast-changing."*—Alvin Toffler**

You might think the term "creative computing" is a contradiction. How can something as precise and logical as electronic computing possibly be creative? We think it can be. Consider the way computers are being used to create special effects in movies—image generation, coloring and computer-driven cameras and props. Or an electronic "sketchpad" for your home computer that adds animation, coloring and shading at your direction. How about a computer simulation of an invasion of killer bees with you trying to find a way of keeping them under control?

## Beyond Our Dreams

Computers are not creative per se. But the way in which they are used can be highly creative and imaginative. Five years ago when *Creative Computing* magazine first billed itself as "The number 1 magazine of computer applications and software," we had no idea how far that idea would take us. Today, these applications are becoming so broad, so all-encompassing that the computer field will soon include virtually everything!

In light of this generality, we take "application" to mean whatever can be done with computers, *ought* to be done with computers or *might* be done with computers. That is the meat of *Creative Computing*.

Alvin Toffler, author of *Future Shock* and *The Third Wave* says, "I read *Creative Computing* not only for information about how to make the most of my own equipment but to keep an eye on how the whole field is emerging.

*Creative Computing*, the company as well as the magazine, is uniquely light-hearted but also seriously interested in all aspects of computing. Ours is the magazine of software, graphics, games and simulations for beginners and relaxing professionals. We try to present the new and important ideas of the field in a way that a 14-year old or a Cobol programmer can under-

stand them. Things like text editing, social simulations, control of household devices, animation and graphics, and communications networks.

## Understandable Yet Challenging

As the premier magazine for beginners, it is our solemn responsibility to make what we publish comprehensible to the newcomer. That does not mean easy; our readers like to be challenged. It means providing the reader who has no preparation with every possible means to seize the subject matter and make it his own.

However, we don't want the experts in our audience to be bored. So we try to publish articles of interest to beginners and experts at the same time. Ideally, we would like every piece to have instructional or informative content—and some depth—even when communicated humorously or playfully. Thus, our favorite kind of piece is accessible to the beginner, theoretically non-trivial, interesting on more than one level, and perhaps even humorous.

David Gerrold of *Star Trek* fame says, "*Creative Computing* with its unpretentious, down-to-earth lucidity encourages the computer user to have fun. *Creative Computing* makes it possible for me to learn basic programming skills and use the computer better than any other source.

## Hard-hitting Evaluations

At *Creative Computing* we obtain new computer systems, peripherals, and software as soon as they are announced. We put them through their paces in our Software Development Center and also in the environment for which they are intended—home, business, laboratory, or school.

Our evaluations are unbiased and accurate. We compared word processing printers and found two losers among highly promoted makes. Conversely, we found one computer had far more than its advertised capability. Of 16 educational packages,

only seven offered solid learning value.

When we say unbiased reviews we mean it. More than once, our honesty has cost us an advertiser—temporarily. But we feel that our first obligation is to our readers and that editorial excellence and integrity are our highest goals.

Karl Zinn at the University of Michigan feels we are meeting these goals when he writes, "*Creative Computing* consistently provides value in articles, product reviews and systems comparisons... in a magazine that is fun to read."

## Order Today

To order your subscription to *Creative Computing*, send \$20 for one year (12 issues), \$37 for two years (24 issues) or \$53 for three years (36 issues). If you prefer, call our toll-free number, **800-631-8112** (in NJ 201-540-0445) to put your subscription on your MasterCard, Visa or American Express card. Canadian and other foreign surface subscriptions are \$29 per year, and must be prepaid. We guarantee that you will be completely satisfied or we will refund the entire amount of your subscription.

Join over 80,000 subscribers like Ann Lewin, Director of the Capital Children's Museum who says, "I am very much impressed with *Creative Computing*. It is helping to demystify the computer. Its articles are helpful, humorous and humane. The world needs *Creative Computing*."

The story behind the two best selling computer games books in the world.

# Computer Games

by David H. Ahl

Everybody likes games. Children like tic tac toe. Gamblers like blackjack. Trekkies like Star Trek. Almost everyone has a favorite game or two.

## It Started in 1971

Ten years ago when I was at Digital Equipment Corp. (DEC), we wanted a painless way to show reluctant educators that computers weren't scary or difficult to use. Games and simulations seemed like a good method.

So I put out a call to all our customers to send us their best computer games. The response was overwhelming. I got 21 versions of blackjack, 15 of nim and 12 of battleship.

From this enormous outpouring I selected the 90 best games and added 11 that I had written myself for a total of 101. I edited these into a book called 101 Basic Computer Games which was published by DEC. It still is.

When I left DEC in 1974 I asked for the rights to print the book independently. They agreed as long as the name was changed.

## Converted to Microsoft Basic

The games in the original book were in many different dialects of Basic. So Steve North and I converted all the games to standard Microsoft Basic, expanded the descriptions and published the book under the new name Basic Computer Games.

Over the next three years, people sent in improved versions of many of the games along with scores of new ones. So in 1979, we totally revised and corrected Basic Computer Games and published a completely new companion volume of 84 additional games called More Basic Computer Games. This edition is available in both Microsoft Basic and TRS-80 Basic for owners of the TRS-80 computer.

Today Basic Computer Games is in its fifth printing and More Basic Computer Games is in its second. Combined sales are over one half million copies making them the best selling pair of books in recreational computing by a wide margin. There are many imitators, but all offer a fraction of the number of games and cost far more.

The games in these books include classic board games like checkers. They include challenging simulation games like Camel (get across the desert on your camel) and Super Star Trek. There are number games like Guess My Number, Stars and Battle of Numbers. You'll find gambling games like blackjack, keno, and poker. All told there are 185 different games in these two books.

Whether you're just getting started with computers or a proficient programmer, you'll find something of interest. You'll find 15-line games and 400-line games and everything in between.

The value offered by these books is outstanding. Every other publisher has raised the price of their books yet these sell for the same price as they did in 1974.

## Moneyback Guarantee

Examine one or both of these books and key some games into your computer. If you're not completely satisfied we'll refund the full purchase price plus your return postage.

Basic Computer Games costs only \$7.50 and More Basic Computer Games just \$7.95 for either the Microsoft or TRS-80 edition (please specify your choice on your order). Both books together are \$15. Send payment plus \$2.00 shipping and handling to Creative Computing Press, Morris Plains, NJ 07950. Visa, MasterCard and American Express orders should include card number and expiration date. Charge card orders may also be called in toll-free to 800-631-8112 (in NJ 201-540-0445).

Order today to turn your computer into the best game player on the block.

**RUNNING WILD**

by Adam Osborne (A. Osborne/McGraw Hill)

Within the next decade, roughly half of today's jobs will change drastically, or disappear altogether. Will the coming years prove to be a dream or a nightmare? Understanding the facts of microelectronic advancements could make the difference.

**Running Wild** shows how the microelectronics revolution came about, and gives an insider's look into how it's shaping your future. . . . \$3.95

**SOME COMMON BASIC PROGRAMS**

by Lon Poole and Mary Borchers (A. Osborne/McGraw-Hill)

A collection of 76 programs you will not have to write for yourself. Each program is presented with BASIC source code, operating instructions, and verbal description. If you're a student or a beginning programmer, you can learn from this book what well designed and documented programs look like . . . . \$12.50

**PET/CBM PERSONAL COMPUTER GUIDE 2nd Edition**

by Carroll Donahue and Janice K. Enger (A. Osborne/McGraw Hill)

A step-by-step guide that assumes no prior knowledge of computers. It contains a wealth of information on everything from keyboard variations to a detailed description of PET memory. Included are: complete operating instructions for keyboard, tape cassette, and disk units; descriptions of all PET/CBM BASIC statements and optimal PET/CBM BASIC programming techniques, including input/output programming. . . . \$15.00

**6502 ASSEMBLY LANGUAGE PROGRAMMING**

by Adam Osborne (A. Osborne/McGraw Hill)

Teach your CBM or Apple computer some new tricks. Increase the capabilities and performance of your PET/CBM or Apple computer by learning to program in Assembly Language. . . . \$16.99

**AN INTRODUCTION TO MICROCOMPUTERS Volume 1 — Basic Concepts (Revised)**

by Adam Osborne (A. Osborne/McGraw Hill)

Using concepts that are common to all microprocessor systems, this book develops a detailed picture of what a microcomputer can do, how it does what it does, and how the particular capabilities of microcomputers can best be applied in any practical environment. This new revised second edition incorporates all recent microprocessor developments. . . . \$12.50

**Z80 ASSEMBLY LANGUAGE PROGRAMMING**

by Adam Osborne (A. Osborn/McGraw Hill)

S-80 users can save both time and computer memory by learning to program in Assembly Language. . . . \$16.99

**Z80 INSTRUCTION HANDBOOK**

by N. Wadsworth (Scelbi)

Convenient pocket-size manual describes Z80 capabilities in easy-to-understand terms. Designed as a practical reference to mnemonics, machine codings, and usage for programmers of every level — beginner to professional. . . . \$5.95

**INTRODUCTION TO LOW RESOLUTION GRAPHICS**

by N. Wadsworth (Scelbi)

Today's exciting personal and small business computing machines are generally provided with at least some kind of Lo-Res graphics capability.

What can you do with Lo-Res graphics? You can plot simple, or complex graphs to consolidate data. You can also improve the presentation and impact of almost anything you want your computer to tell people. It can be used to animate; clarify and amplify educational materials; or just plain entertain people. . . . \$11.95

**CALCULATING WITH BASIC**

by R. Guido (Scelbi)

Use your computer to calculate home mortgage payments, interest rates, payback periods and more. Complete routines are already worked out for problem solving using the BASIC language. Also includes mathematics; finance and statistics; mechanical engineering; and electronics. . . \$8.95

**Z-80 SOFTWARE GOURMET GUIDE AND COOKBOOK**

by N. Wadsworth (Scelbi)

Over 100 usable subroutines, plus how to use them . . . . \$15.95

**6502 SOFTWARE GOURMET GUIDE AND COOKBOOK**

by R. Findlay (Scelbi)

Includes an instruction set; floating point and decimal arithmetic; search and sort routines; and more. . . . \$12.95

**THE SECRET GUIDE TO COMPUTERS**

by R. Walter (Scelbi)

A quickie course on computers. . . . \$5.95

**MICROCOMPUTER POTPOURRI**

from Scelbi Publications

A pocket-sized reference for the beginner. Has a glossary covering all the jargon. Full digest on understanding microcomputers. . . . \$3.95

**TAKE MY COMPUTER...PLEASE!**

by S. Clarcia (Scelbi)

An uproariously funny book about the true-life misadventures of author Steve Clarcia and his computer's inability to cooperate. Hardcover. . . . \$5.95

**UNDERGROUND GUIDE TO BUYING A COMPUTER**

from Scelbi Publications

This book is a guide to buying a microcomputer. Computers, like people, come in all sizes. So before you buy a computer, look at the competition.

Treat a computer purchase just as you'd treat

any other important decision — check out all the facts . . . . \$5.95

**UNDERSTANDING MICROCOMPUTERS**

from Scelbi Publications

You get the fundamental concepts behind the operation of virtually all microcomputers. Introduces BASIC language programming and tells how to select a small computer system. Basic instructions for almost every class of microprocessor are illustrated along with details on how a CPU is organized, follows directives, and solves problems. Explains flow charts, program worksheets and memory maps. . . . \$9.95

**LEARN MICROCOMPUTERS**

from Scelbi Publications

A new multimedia information package. Includes text ("Understanding Microcomputers") plus a high-quality cassette written for the beginner just starting in microcomputers. It covers all the basics quickly, easily, and enjoyably. The companion tape includes a chapter-by-chapter synopsis of the book. . . . \$14.95

**PERSONAL INFORMATION MANAGEMENT SYSTEM**

from Scelbi Publications

When you're in business you've got a personal stake in how information is managed. That's because information is your key to success. PIMS will allow you to unleash the power of a microcomputer — and you don't have to become a programmer first. Use a computer for accounts receivable, accounts payable, maintain inventory records, run a mailing list, and keep track of credit charges. . . . \$11.95

**JOHN WILEY & SONS, Inc.**

**BACKGROUND MATH FOR A COMPUTER WORLD, 2nd Edition**

by R. Ashley (Wiley & Sons)

In today's increasingly complex world of computers, this newly updated guide will prove more useful than ever. In a sequential, crystal clear format, it provides the basic mathematical facts, techniques, and ideas a person must understand to be effective in the computer world.

This self-instructional guide requires only a minimal high school math background and no prior knowledge of computers. . . . \$7.95

**WHY DO YOU NEED A PERSONAL COMPUTER?**

by Lance A. Leventhal & Irving Stafford (Wiley & Sons)

Whether you're considering buying a personal computer or already own one, this is the book for you! Both consumer handbook and practical manual, it includes advantages and drawbacks of each model, plus technical advice and sources of equipment and information. Find out how to use the personal computer to manage your finances, analyze stock market trends, serve as appliance controllers, much more!

. . . . \$8.95

**FORTRAN IV, 2nd Edition**

J. Friedmann, Ph.D.; P. Greenberg, Ph.D.; A.M. Hoffberg, CPA, MBA (Wiley & Sons)

This revolutionary new edition of the standard FORTRAN guide is heavily oriented to personal computers. Ninety percent of the material can be implemented on microprocessors and users of mainframe computers will also find the book applicable to their needs.

**FORTRAN IV, 2nd Edition**, give complete explanations — with comparative tables — of the new standards for FORTRAN developed in 1977.

Whether you use FORTRAN 77 or FORTRAN IV, the authors point out all the differences and let you follow whichever version is right for your machine. Previous data processing background and access to a computer are unnecessary.

..... \$10.95

#### USING CP/M

by J. Fernandez and R. Ashley (Wiley & Sons)

CP/M — The Control Program for Microcomputers software package is the most widely used microcomputer operating system. With it, tens of thousands of users operate their microcomputers and perform routine work functions. This is a detailed introduction to the use of CP/M for maximum capability and efficiency — with any hardware, using any programming language.

Now microcomputer users can get the most from their software (or "firmware") for best results from their hardware! ..... \$8.95

#### APL - AN INTERACTIVE APPROACH

by L. Gilman, A.J. Rose (Wiley & Sons)

This revised second edition of **APL — An Interactive Approach** has been renamed to reflect the fact that several versions of APL are currently being offered. The text has undergone a modest shift in orientation toward commercial uses of APL.

Additional functions and features now available in both the IBM and Scientific Time Sharing implementations have been included in this edition, and the chapters on workspace management and function definition have been substantially rewritten providing additional graphic aids to the student. .... \$16.95

#### BASIC FOR HOME COMPUTERS

by B. Albrecht, L. Finkel and J. Brown (Wiley & Sons)

Explains how to read, write and understand BASIC programs. This guide includes applications and games for the hobbyist and others who want to put their computers to work or to play. ... \$7.95

#### TRS-80 BASIC

by B. Albrecht, D. Inman and R. Zamora (Wiley & Sons)

Beginners rapidly learn how to program the versatile TRS-80™. The book's unique self-teaching format requires no previous familiarity with computers. Packed with exciting games and computer graphics, the book also includes learning activities in math and language arts, and applications for home management, financial computations, and household record keeping. .... \$8.95

#### YOUR FIRST COMPUTER

by Rodney Zaks (Sybex)

Originally published in 1978 as "An Introduction to Personal and Business Computing", this best seller has been completely revised, redesigned and expanded to meet the needs of a growing segment of the population becoming interesting in small computers.

**Your First Computer** has been designed as both a basic introductory text and a reference manual, making it equally useful for people just becoming curious about computers as well as experienced programmers about to purchase their own system. .... \$7.95

#### THE CP/M HANDBOOK WITH MP/M

by Rodney Zaks (Sybex)

Control Program for Microcomputers, or CP/M

is an operating system — a program designed to let the user execute applications programs conveniently on the computer.

The book contains a comprehensive description of all CP/M facilities and resources, instructions for advanced operations, and complete discussions of all versions of CP/M up to and including 2.2, CDOS and MP/M. .... \$13.95

#### THE PASCAL HANDBOOK

by Jacques Tiberghien (Sybex)

A comprehensive, alphabetical dictionary of every Pascal symbol, reserved work, identifier and operation for most existing versions of Pascal, including Jensen & Wirth (Standard and CDC version), H-P1000, OMSI (DEC), Pascal/Z, ISO, and UCSD Pascal. .... \$14.95

#### INTRODUCTION TO PASCAL (Including UCSD PASCAL)

by Rodney Zaks (Sybex)

This step-by-step guide to UCSD and STANDARD Pascals is written as a tutorial for beginners — even those with no programming experience — yet includes complex concepts for experienced programmers. Both will find the book a useful reference tool because of its logical format and extensive appendices. .... \$12.95

COMPUTER  
SCIENCE  
PRESS

#### CHESS AND COMPUTERS

by D. Levy (Computer Science Press)

This is the first really comprehensive book on the subject of computer chess. It describes the earliest chess "machine," the famous Automaton chess player, a detailed account of Torres Y Quevedo's invention that played the ending of king and rook against king, a description of how computers play chess, and a detailed history of computer chess, including an account of early Soviet attempts at chess programming. It also contains a record of computer chess tournaments and a description of various research projects that are currently under way. .... \$9.95

#### STRUCTURED BASIC AND BEYOND

by W. Ambsbury (Computer Science Press)

The BASIC programming language is presented in an easily-understood and well-written manner oriented toward interactive terminal use. The author emphasized structured programming concepts and goes beyond to include concepts related to data structures, files, strings, list, stacks, and queues. This text presents examples and exercises in BASIC which range from simple to challenging and answers are provided to selected self-review exercises. .... \$10.95

#### PASCAL

by W. Findlay and D. Watt (Computer Science Press)

The primary aim of this book is to teach good programming practice based on Pascal. Its secondary purpose is to serve as an introduction to the language, for both the novice in computer science and the reader who has already learned one of the other computer languages. The emphasis is on sound programming principles, good style and a methodical approach to program development. No prior acquaintance with computers or with advanced mathematics is assumed. .... \$12.95

#### MORE CHESS AND COMPUTERS: THE MICROCOMPUTER REVOLUTION THE CHALLENGE MATCH

by David Levy and Monroe Newborn (Computer Science Press)

Chess-playing computer programs have improved over the past 10 years to the point where a computer has even won a game with the grand-master.

This book details all the exciting events in the field since 1975. It includes a description of the microcomputer revolution and its impact on computer chess as well as a complete description of the \$2500 Challenge Match between David Levy and Chess 4.5, the world champion program. No knowledge of computers is required to enjoy this book. .... \$12.95

#### THE NATURE OF COMPUTATION: AN INTRODUCTION TO COMPUTER SCIENCE

by Ira Pohl and Alan Shaw (Computer Science Press)

Intended for a first course in computer science, this book deals with the core concepts of the subject paralleled with an introduction to programming. It provides the following three major objectives: a survey of the field; an initial literacy in the language and methods of computer science; and a historical, philosophical, and social perspective. .... \$16.95

**A CONSUMER'S GUIDE TO PERSONAL COMPUTING AND MICROCOMPUTERS**

by Stephen Freiburger and Paul Chew (Hayden)

Both an introduction to the principles of microcomputers that assumes no previous knowledge on the reader's part, and a review of 64 microcomputer products from over 50 manufacturers. A selection and sources section assists in reviewing, selecting, and purchasing microcomputer products. Summary charts of major microcomputer products offer a quick summary of specifications for a given products. \$8.95

**Z-80 AND 8080 ASSEMBLY LANGUAGE PROGRAMMING**

by K. Spracklen (Hayden)

The best introduction to Assembly Language we sell. You should have experience in BASIC. \$7.95

**SARGON HANDBOOK**

by D. Spracklen K. Spracklen (Hayden)

Complete documentation covering all algorithms in "Sargon" can be found in this guide book. Contains complete table of contents, block diagram of the program four part introduction. Z80 listing, and an index to subroutines. Fully annotated. \$15.95

**TEN EASY PIECES: CREATIVE PROGRAMMING FOR FUN AND PROFIT**

by Hans Sagan and Carl Meyer Jr. (Hayden)

An introduction to the BASIC language through computer games. Written in an informal style, it stimulates interest in creative programming of games of chance and of skill. Teaching by example, these games illustrate the various programming techniques at stages of difficulty which are suitable to almost unlimited modification, simplification, or amplification. The text requires little knowledge of elementary mathematics. \$7.95

**STIMULATING SIMULATIONS, 2nd Edition ATARI VERSION**

by C. W. Engle (Hayden)

An exciting handbook containing twelve "simulation programs," which are actually game programs. Clearly written in a BASIC format that is compatible with all microcomputers, they are all original and well-documented. Each program is presented with a listing, sample run, instruction,

and program documentation, including flow chart and ideas for variations. \$5.50

**THE MIND APPLIANCE: HOME COMPUTER APPLICATIONS**

by T. G. Lewis (Hayden)

Chock full of unique and challenging ideas for applying your computer to home use. Make your computer write poetry, balance a checkbook, dial a telephone automatically, handle household budgets, menu planning, shopping lists and income tax calculations. Dozens of BASIC language programs. \$9.55

**HOME COMPUTERS CAN MAKE YOU RICH**

by Joe Weisbecker (Hayden)

Here's a valuable text which contains a wealth of down-to-earth money-making opportunities in the field of personal computing. You'll learn about free lance writing, programming, consulting and inventing. Ideas for articles, books, programs, games, gadgets, arts, crafts, tools, services, attachments, computer-made products, investing and speculating are discussed. \$6.50

**ADDISON-WESLEY**

**LITTLE BOOK OF BASIC STYLE**

by J. M. Nevison (Addison-Wesley)

Ideal reference for BASIC programmer, junior high to research scientist. Indexed, illustrated, 151 pages. \$5.95

**TRS-80 DISK AND OTHER MYSTERIES**

by Harvard C. Pennington (I.J.G)

If you are serious enough about disk programming to own BSM-2D or NEWDOS then you ought to purchase this book. It explains the organization and features of TRS-DOS 2.0, 2.1, 2.2; NEWDOS; and VTOS. Gives detailed procedures for recovery of lost data. While this book is expensive—8 1/2" by 11" format with typewritten instead of typeset printing — the information is worth the price. \$22.95

**MICROSOFT BASIC DECODED AND OTHER MYSTERIES**

by Harvard C. Pennington (I.J.G)

The definitive guide to your disassembled Level II ROMs. To supplement the 124 pages of comments there are six additional chapters, covering every single ROM routine in depth. Exploit the full power of Microsoft BASIC, with the aid of hundreds of examples, explanations and sample Assembly Language routines. \$29.95

**TRS-80 ASSEMBLY LANGUAGE PROGRAMMING**

by W. Barden. (Radio Shack)

Covers Z80, Introduction to Assembly

Language, the Radio Shack Editor/Assembler, T-Bug, and debugging methods. Also explains how to move data, the use of arithmetic, compare, logic, bit operators, shifts, strings, tables, input, output, and 12 commonly used subroutines. Well indexed and illustrated. \$3.95

**THE BASIC HANDBOOK**

by Dr. David Lien (CompuSoft)

This book is unique. It is not a textbook. It's far more than a dictionary. It is a virtual encyclopedia of the BASIC language. It explains over 250 BASIC words, how to use them and alternate strategies. Since over 50 computers are represented, yours is probably in here too. \$14.95

**LEARNING LEVEL II**

by Dr. D.A Lien (CompuSoft)

A user's guide to Radio Shack Level II BASIC. \$15.95

**PATHWAYS THROUGH THE ROM**

by R.M. Richardson, R.Fuller, J.I. Phillipp, G. Blank, J. Hartford (SoftSide Publications)

The definitive guide to Level II BASIC. Includes Super Map by Fuller Software. The TRS-80 Disassembler by George Blank and DOS Map by John Hartford. \$19.95

**CP/M SOFTWARE SUMMARY GUIDE**

from Rainbow Associates

A concise, handy summary of the major software used on most CP/M systems. Included are summaries of the CP/M operating system, Microsoft BASIC, CBASIC\$, and the CP/M utilities DESPOOL\$, MAC\$ and TEX.

The CP/M Software Summary Guide is designed to be especially easy to use. Features are organized alphabetically, so the reader can find an explanation quickly rather than having to page through various function sections. \$4.95

**H.W. SAMS & Co.**

**TRS-80 INTERFACING**

by J.A. Titus (H.W. Sams & Co)

What you need to know to connect your S-80 to the world. Assumes knowledge of some Machine Language programming. \$8.95

**TRS-80 INTERFACING (Book Two)**

by Titus, Titus, and Larson (H.W. Sams & Co)

Introduces you to more advanced interfacing techniques that allow you to do new things with your S-80 computer. You learn how to drive high-current and high-voltage loads, how to generate voltage and current signals used in a variety of control applications, and how to measure unknown voltages and currents with your computer. Contains complete software examples. \$10.95

# FLAGS

by W. Morris and J. Cope  
**Flags is an Atari program requiring at least 16K memory.**

This program uses Atari's colorful graphics capabilities to display national flags on the screen. The object, then, is to dig back in your mind to your 7th-grade geography class and associate the flags with the countries which they represent. It's not only fun, but painlessly educational as well! All the necessary prompts and instructions are given by the program as it runs.

Play with this for awhile, and the next time you visit the United Nations building you'll be able to impress all your friends out of their minds.

Flag Variables:

A\$: Country name.

B0, B1, B2, C0, C1, C2: Color luminescences.

NU: Number of flags to identify.

PR: Current number of flags being identified.

SCORE: Current number correct.

TOTAL: Current number of entries.

STICK, STRIG: Joystick

commands to control choice of input. KEY: Keyboard input.

## Documentation

### Lines 20-50:

Title Page

### Lines 60-90:

Game Delimiter — Player sets the limit on the length of the session. Line 90 sends the program to line 8000 after the final emblem.

### Lines 100-140:

Random selection of the country and flag to be identified. If R > 18 branch to line 1000, otherwise we go to 2000.

### Lines 1000-1090:

Routine to draw VERTICAL bars. Line 1010 branches to 3000 if R < 8 to draw a crest.

### Lines 2000-2010:

Routine to draw HORIZONTAL bars. Line 2010 is a conditional branch to 3000 if R < 25 to draw a crest in the flag center.

### Line 3000:

Crest Routine

### Lines 8000-end:

The participant chooses whether to end the session or start again.

### Lines 9000-9200

The main game loop section.

Notice how the Atari 'STICK' command is used to scroll the possible choices while the STRIG statement is used to signify the player's selection.

Line 9140 controls the scolling of possible choices through recognizing only an 'up' input. Once received, the program branches to the appropriate line.

Line 9150 is used to recognize the player's choice of the country's flag.

Line 9170 equals correct answer while 9200 registers an incorrect entry.

### Lines 10000-10360:

Data lines containing country and color data.

### Lines 15000-15010:

Data lines for two voice anthem.

### Lines 30000-30020:

Sound routine for siren affect.

### Lines 30040:

Sound routine for Anthem. A, B, C and D are dummy variables used to speed up the read process.

### Lines 30100-30130:

Delay Routines.

### Lines 31000-31060

# INVENTORY 'S'

by Roger W. Robitaille Sr.

**Inventory 'S'** is an exciting advance in small business software for the TRS-80™. Its in-memory system of data storage solves the problems of both sequential and random access files, while providing extremely fast, random access to any record. Other advantages include the ability to use any combination of characters for stock number; an exceptionally flexible record format (field names are user definable); and the ability to store data to tape or disk and upgrade at any time. Up to 150 items can be stored per 16K of available memory, with stock number, description, cost, vendor, reorder, and profit data in each record. Use your present stock numbers (a sort function is included), unlike competing systems which force you to use a different "record number," User-definable screen and printer reports let you see just the data you need, when you need it.

**Inventory 'S'** can be used effectively with a 16K, tape based system or a 48K, disk and printer system.

## Strategic Simulations

# SINK THE BISMARCK!

Historic wargaming may be the only intellectual hobby which creates more intensely devoted fanatics than home computing. When two wargamers spend an evening refigting a famous battle, they'll spend several hours happily setting up the gameboard, firepower charts, unit strength tables and so forth. . . all before the first shot can be fired! There are such paper and pencil simulations of every famous battle from Shiloh to El Alamein. If you've ever tried one, you already know the excitement and challenge of trying to be a better general than Rommel.

You can get the game program, two mapboard charts (for plotting secret strategies in grease pencil between moves), two ship data charts, two system command cards, a loading instruction sheet, and a rulebook. If you've got an Apple II Plus (or an Apple II with Applesoft Firmware ROM Card) with 48K memory and a 5 1/4" mini floppy disk drive, you can be playing Computer Bismarck in a few days. . . . . \$59.95

Computer Bismarck is also available for the S-80 user.

16K Cassette Level II ..... \$49.95  
 Disk ..... \$59.95

## AMBUSH

Computer controlled mapboard of a typical French village.  
 Step-by-step computer regulated play.

Extensive line of sight rules providing for hidden movement.

Each soldier individually rated for strength, intelligence, dexterity, and marksmanship.

Realistic weapons, characteristics, and explosives.

Sophisticated movement rules permitting running, walking, crawling, dodging, and sneaking.

Simultaneous execution of orders.

Ability to save a game in progress and restart it at a later date.

Playing time 1 to 5 hours. 48K Apple Disk Machine Language . . \$59.95

# INTERACTIVE FICTION

From  
Adventure  
International

Step into a new  
dimension  
in literature.

The computer sets the scene with a fictional situation, which you read from the terminal. Then you become a character in the story: When it's your turn to speak, you type in your response. The dialogue of the other characters, and even the plot, will depend on what you say.

**Six Micro Stories** offers an introduction to Interactive Fiction. Six short stories involve you in a variety of situations. You are an American spy in Hitler's Third Reich, the pilot of a doomed 747, and more.

**Local Call for Death** is a detective story considerably more challenging than the above program. This one will put your analytic skills to the test.

**Two Heads of the Coin** is a psychological mystery set in the London of Sherlock Holmes. Most challenging of all, this program will tax your observational skills and, above all, your imagination.

On S-80 Disk. Requires user to have a copy of TRSDOS 2.2 or 2.3.

Six Micro Stories. . . . . \$14.95  
Local Call For Death. . . . . \$19.95

## The Right Tool for the job.

### STAD RAMWARE

Unlock the power of the Z-80 with STAD (Symbolic Trace and Debug) a powerful monitor with special Debugging. Single step through the Machine Language programs. For tape and disk systems.  
16-48K on one S-80 Cassette . . . . . \$24.95

### EDITOR/ASSEMBLER PLUS MICROSOFT

Plus what? Well, you get the features of the T-Bug and the original editor/assembler; plus macros and conditional assembly; plus extra commands like substitute, move, copy, and extend; plus Z-Bug.  
S-80 16K Cassette . . . . . \$29.95

### RSM 2/2D SMALL SYSTEMS SOFTWARE

22 commands to control your S-80 Z-80 processor! Examine ROM, text RAM, program in Machine Language, read/write Machine Language tapes, and much more! RSM-2 tape loads at top of 16K Level I or II. RSM-2 disk includes three versions for 16K, 32K, and 48K.  
RSM-2 S-80 16K Cassette . . . . . \$26.95  
RSM-2D S-80 Disk . . . . . \$29.95

### Z-80 ZAP CMD RAMWARE

Powerful disk modification utility in Machine Language allows you to READ, DISPLAY, MODIFY, WRITE, and COMPARE disk sectors. It will calculate Hash Index Codes. You can recover killed disk files. Search for a byte and have it identified with a flashing cursor. Do disk backups, apply patches and fixes, and explore your disk. Instruction manual included.  
S-80 16K Disk Machine Language. . . . . \$29.95

### ULTRA-MON INTERPRO

Ultra-mon is the first ROM independent Machine Language monitor which puts you in COMPLETE CONTROL with exclusive INTERPRETIVE EXECUTION.

Each instruction is individually fetched, decoded, disassembled, and analyzed by Ultra-mon's "BRAIN" so that your efforts cannot "Bomb-out" and so that you can put breakpoints anywhere.

Ultra-mon displays, disassembles, traces (hard-copy trace disassembly, too!) lineprints, modifies, relocates memory, and even relocates itself with its commands.

Totally ROM independent, Ultra-mon will work in both the old and the new ROM independent and will not be affected by any lower-case modifications.  
16K S-80 Cassette Machine Language . . . . . \$24.95

### SUPER UTILITY BREEZE COMPUTING

If you thought SuperZap was something wait until you get your hands on SUPER UTILITY! Possibly the most powerful utility program on the market for your S-80, SUPER UTILITY permits you to:

- \*Automatically repair a scrambled directory by fixing both HIT and GAT tables;
  - \*Format a disk without erasing data files;
  - \*Format a backup virtually any disk except itself;
  - \*Recover killed files;
  - \*Purge a disk;
  - \*Execute a complete Directory check;
  - \*Repair bootstrap function;
  - \*Totally ROM independent;
  - \*Plus other features too numerous to mention.
- S-80 16K Disk . . . . . \$49.95

# STRATEGY STRIKE

by David Steenson  
Apple translation by Jon Voskuil

**“Strategy Strike” is a game that requires a 16K Level II S-80 or an Apple II or Apple II Plus. The program is equipped with sound, so an external amplifier is needed for the S-80 version.**

“Strategy Strike” is a fast-moving game that combines both logic and memory. Players attempt to capture the opposing player’s flag by moving an army of 40 pieces across a battle board forwards, backwards, or sideways.

The game usually will take between 30 minutes and an hour to play. As players become more and more familiar with the process of the game, they will begin to develop their own strategies for army setups and movement.

The Atari version of “Strategy Strike” will appear in the April issue of **SoftSide**.

## INSTRUCTIONS

The object of the game is to move militarily ranked pieces across a battle board in anticipation of capturing the opposing player’s flag. Each player starts with an army of 40 pieces consisting of:

# OF PIECES	NAME	RANK
1	Marshal	1
1	General	2
2	Colonel	3
3	Major	4
4	Captain	5
4	Lieutenant	6
4	Sergeant	7
5	Miner	8
8	Scout	9
1	Spy	10
6	Bomb	UNMOVEABLE
1	Flag	UNMOVEABLE

The above pieces are in order of military rank, the Marshal being the highest ranked, and the Spy being the lowest. However, even though the spy is the lowest ranked piece, it is the only piece that can remove the Marshal from the board. The Bombs are unmoveable pieces that can remove any piece that tries to “strike” it, except for the Miner who can dismantle and remove the Bomb.

The game is played on a ten-by-ten board which will be fully displayed on the screen throughout the game. Player 1 sets up the pieces on the top four rows of the board, and player 2 sets up pieces on the bottom four rows. The two middle rows are left blank at the start of the game. When both players have set up their armies, they will have a chance to make any needed changes.

## SETUP

Player 1 sets up pieces on rows 1-4 (row 1 is the back row and row 4 is the front row). To place any of the movable pieces (except the Spy) on the board, simply type the rank of the desired piece and the blinking square will then contain that piece. To place a Spy, a Bomb, or a Flag, type S, B, or F respectively. Player 2 sets up pieces on rows 7-10 (row 10 is the back row and row 7 is the front row.) Player 2 places pieces on the board in the same manner that player 1 does.

## MOVEMENT

1). Pieces may move only one space at a time — forwards, backwards, or sideways. There are no diagonal moves. The players type in the coordinates of the piece they want to move and where they want to move it. The X and Y coordinates of a piece are measured VERTICALLY and then HORIZONTALLY (X: Vertical Y: Horizontal).

2). Pieces may not move onto the lakes in the center of the board.

3). Two pieces may not occupy the same space at one time and pieces may not be jumped.

4). The Flag and Bombs cannot be moved.

A player’s pieces are revealed only when it is that player’s turn. The opposing player should not be facing the screen when an opponent is debating a move. The only time that both players can look at the screen at the same time is when one player’s piece attacks another’s.

## STRIKE OR ATTACK RULES

1). Players’ pieces must be in adjoining squares to attack. There are no diagonal attacks.

2). A player cannot strike and move in the same turn.

3). To strike, a player does the following: When the computer prints “FROM?”, the player types the current position coordinates. The computer will then print “TO?”. The player types the coordinates of the piece that is to be attacked (making sure it is in an adjoining square). The computer will then print “CORRECT?”. A response of “YES” will check to see if the attack is correct. A response of “NO” will return execution to “FROM?” input.

4). The piece with the lower rank is erased from the board.

5). If the rank is equal, both pieces are erased from the board.

6). A Spy can remove a Marshal if the Spy attacks first, however if the Marshal attacks first, the Spy is removed. A Miner can remove a Bomb from the board.

7). Bombs cannot be moved, but rather must wait for an opposing player to strike them.

## SPECIAL FEATURES

1). If for any reason the display on the screen becomes distorted (possibly due to improper input) a player can input the coordinates (0,0) in either the “FROM?” or “TO?” input and the board will be redrawn.

2). If the player cannot move in turn or wishes to give up, the coordinates (-1,-1) can be typed in the “FROM?” input.

3). If the player types the wrong coordinates in the “FROM?” input, the coordinates (-1, -1) may be typed in the “TO?” input to return to the “FROM?” input.

4). When a player has input both the initial (FROM?) and final (TO?) coordinates, the computer will print “CORRECT?”. A “YES” response will move the player’s piece as instructed. A “NO” response will return to the “FROM?” input. This feature serves two purposes:

1) A player may have typed in the wrong “TO?” coordinates.

2) A player may want to make a different move.

The game ends when a player strikes the opposing player’s Flag or a player gives up.

**Strategy Strike Variables:  
S-80 Version**

**DD\$:** Graphic string used to build DE\$  
**DE\$:** Graphic string used to white out part of screen during attack routine.  
**ED\$:** Null string used to erase the section of the screen whited out by DE\$.  
**B\$(1-12):** Graphic strings for strike routine printout of the value of the pieces attacking.  
**X, Y:** For/Next loop variable counters used to compute data and poke graphics characters.  
**E(1-10,1-10):** PRINT@ positions for player's pieces on game board.  
**A(1-10,1-10):** Space occupation variables for player 1. If A(X,Y) has a piece at coordinates (X,Y).  
**A(11-20,1-10):** Space occupation for player 2.  
**I:** For/Next loop variable for delay of execution and graphic display printouts.  
**U:** User call variable.  
**II:** For/Next loop variable for

delay of execution and graphic display printouts.  
**T:** Counting variable used to print coordinate numbers on game board.  
**C(1-10,1-10):** Space identification variables for player 1. If the value of C(X,Y) is between 1 and 12, and A(X,Y)=1 then C(X,Y) contains the type of piece at this location.  
**C(11-20,1-10):** Space identification variables for player 2.  
**A\$:** INKEY\$ used for players to set up their pieces.  
**A:** Numerical value of A\$ if it has one.  
**C1, C2:** X, Y coordinates of piece player is attempting to move (in STRATEGY STRIKE, the X is the vertical coordinate and the Y is the horizontal coordinate).  
**C3, C4:** X, Y coordinates of space to which player wants to move his piece.  
**X6, Y6:** Set points of the PRINT@ position that the player is trying to move to (used to make sure a player is not moving onto a

lake via POINT (X6,Y6)...).  
**U1, U2:** Starting coordinate of player's piece that player wishes to change the position of.  
**U3, U4:** Final coordinates of piece at coordinates (U1,U2).  
**U5:** Stores the current value of C(U1,U2) so player's piece at coordinates C(U1,U2) and C(U3,U4) can be interchanged.  
**NL\$:** Dummy string for sound routine.  
**E8:** Starting address where sound routine is POKEd into memory.  
**E9:** Variable pointer for NL\$.  
**E7:** Counting variable that POKES sound data into memory.  
**E6:** Sound routine variable (reads sound data).  
**NU(1-12):** Starting number of pieces of each type that may be placed on the board by each player.  
**PI(1-12):** Number of pieces of each type actually placed on the board by the current player.  
**SP(1-2):** Position for the two display boxes on the screen used during attack routines.

```

### Notes on the Apple Version

In the Apple version, locations on the board are specified by a letter/number combination such as B4. The RETURN key is not used in entering these coordinates; the left-arrow key may be used, however, to connect a mis-typed character. The "0,0" and "-1,-1" entries which are allowed in the S-80 version are not allowed (or needed) here. Other than these variations, the play is about the same.

The structure of the actual program is totally different from the S-80 version, and so are all the variables. The following list should prove helpful in following the logic of the coding:

Strategy Strike Variables:  
Apple Version

A: Temporary variable for a piece to be printed.

A1: Piece occupying "from" square.

A2: Piece occupying "to" square.

A(X,Y,P): Contains player p's pieces at coordinates X, Y.

BOMB: Numerical designation for bomb.

BT: Memory address for screen window.

CUR: Memory address for cursor.  
FLAG: Numerical designation for flag.

I: General loop variable.

IN(I): Number of pieces of type I already entered.

J: General loop variable.

LFT: Memory address for screen window.

MUS: Memory address for music.

N\$(I): String to draw large piece I.

NU(I): Quota of pieces of type I.

P: Player number (0 and 1 in code).

PASS: Logical variable; if 1 then skip turn.

PITCH: Memory address for music.

R\$: General input variable.

R1, R2: Coordinates of "from" square.

R3, R4: Coordinates of "to" square.

S1\$, S2\$: Strings used to draw board.

SPY: Numerical value for spy.

TIME: Memory address for music.

TP: Memory address for screen window.

WID: Memory address for screen window.

X: Horizontal coordinate.

Y: Vertical coordinate.

Z: Time delay loop variable.

# SARGON II

**At HAYDEN, The Best Has Gotten Better.**

Sargon, the program that came in first in the Creative Computing Microcomputer Chess Tournament, has become Sargon II. The game has been vastly improved and now has a faster response time. A new Level 0 has been incorporated for beginners. The board is easier to pre-set and there is now a Hint mode that provides suggestions from the computer. Sargon II took on the maxi-computers in the West Coast tournament and finished in the money! Shows more thinking power than you ever expected.

# PERSONAL SOFTWARE VISICALC™

Students and professors, small business owners and tycoons, all rave about Visicalc. Dispense with pencil, paper and calculator — instead, you can have an “electronic sheet” to do your calculations, projections, and planning. You can calculate sales projections, income taxes, personal budget, cost estimates, engineering changes — even balance your checkbook. Visicalc is partitioned into a matrix of rows and columns. At each position in this matrix you can define a title, formula, or number. By writing on your “electronic sheet,” you can set up individualized charts, tables, and records. For example, you can design your own sales forecasting format to assist in making the important “What if?” business decisions such as: “What would happen if sales increased by 10%?” “What if delivery time were decreased by two weeks?” “What would be the result if I produced 500 widgets this month instead of 600? What if I produced 700?” With Visicalc to assist you in performing these calculations, you can save countless hours.

**TSE-HARDSIDE**

by David T. Gray

COLUMN CALCULATOR is a “word processor for numbers,” a number processor designed to be used like a calculator. But it can handle large blocks of information as if handling one number at a time. The work space can be thought of as a large matrix with rows and columns much like an accountant’s spreadsheet. Data can be easily entered into columns; and the columns can then be moved around. Columns can be overlaid from an existing data file on disk. One column can be added, subtracted, multiplied, divided, or raised to a power of another and the results put in another column. Columns can be compared to one another. Columns can be totalled, or set with a constant, and any column can be sorted, carrying the rest

of the columns with it. A predefined function can be defined, thereby preprogramming the worksheet.

The statistical section provides analysis of the data. The analysis includes simple statistics, linear regression, simple correlation, histogram and the T-test.

The information can be printed out on the line-printer in a compressed format at any stage in the development of a data base. Thus, it can be used as a finished report or as a copy of the worksheet to permit the filling in of additional data for later entry into the data base. The data base can be saved on disk and recalled at a later date for modification or for generating a report. Any column in a file on disk can be referenced and added to the current worksheet.

All user communication with COLUMN CALCULATOR uses FLASH, the line input/editor routine. This enables the user to not only key in instructions, but to edit errors or data as well.

32K disk..... \$39.95

### SPACE WAR

You're in command in SPACE WAR! Destroy your opponent's ship by forcing him to collide with the sun or to explode upon re-entry from hyperspace . . . or challenge him to fight face to face with missile fire. You're in command of the speed and direction of your ship. You control the timing of your missiles. You select the game mode from five options, including Reverse Gravity, and the battle begins . . . Accelerate to place your shots — and escape into hyperspace before your opponent comes within range. But be wary, he (or she!) may circle out of sight and reappear on the opposite side of the galaxy! (This is the classic MIT game redesigned especially for the Apple.)

### SUPER INVASION

SUPER INVASION is the original invasion game, with the original moon creatures and faster action than any other invasion game. Features superb high resolution graphics, nail-biting tension and hilarious antics by the moon creatures! Self-running "attract mode" of operation for easy learning and demonstration of the game. As good in every way as the famous Invaders arcade game. High speed action! Sound effects! Runs on the Apple II and the Apple II Plus.

**Super Invasion Only**

32K, Apple II, Cassette . . . . . \$19.95

**Space War and Super Invasion Combined**

### AIR TRAFFIC CONTROLLER

In AIR TRAFFIC CONTROLLER you assume responsibility for the safe flow of air traffic within a 15 x 25 mile area up to 5,000 feet in altitude. During your shift as a controller in charge of this airspace, 26 aircraft become active and under your control. Jets and prop planes have to be guided to and from the two airports, navigational beacons and ten entry/exit fixes. The aircraft enter the controller's airspace at various altitudes and headings whether or not you are ready.

# A Microsoft Adventure for the TRS-80™ and Apple

Here is the granddaddy of the computer Adventure games. Microsoft Adventure, from the people who wrote BASIC for personal computers, places you in "Colossal Cave," where both treasures and perils abound! Here you can find gold, silver, jewelry, magic items, and precious pottery. But you may also find threatening dwarves, trolls, large green snakes and a giant oyster. Meet the pirate and the computer wizard. See the volcano and sulphur lakes.

As you become more skilled in overcoming obstacles and avoiding hazards, more regions of the cave will open up to you. Keep your wits about you and you may eventually become a Grand Master. Slip up and you may not become anything, if that. It all depends upon your ability and your ingenuity.

When your adventure begins, you will find yourself outside of the cave. From there on in you must tell the computer what you wish to do by means of one- or two-word commands. Sometimes the computer might offer to help you with a small hint, but remember, there's no free lunch! You will have to do most of the work, including learning to use magic, yourself. Look for allies in unexpected places and you might surprise yourself. But above all, enjoy!

# Tips For Your Chips

Get the maximum use and enjoyment from your micro with these popular paperbacks

## DATA FILE PROGRAMMING IN BASIC

**LeRoy Finkel & Jerald R. Brown**  
With your own microcomputer, minimal knowledge of BASIC, and this easy-to-use guide, you can learn how to use data files to keep track of billings, customer inventory, and expenses, maintain mailing lists, process numerical and statistical information, and much more. Sample programs and lots of practical advice assist you every step of the way. The guide uses the most popular variants of BASIC, TRS-80 BASIC and Microsoft BASIC-80. An extensive appendix covers BASIC for the Northstar computer.

March 1981  
approx. 320 pp. \$9.95

Files, fun, and fancy functions plus practical applications

## MORE TRS-80 BASIC™

**Don Inman, Ramon Zamora & Bob Albrecht**

This exciting new interactive guide to programming in TRS-80 Level II BASIC teaches scores of practical applications—both recreational and educational. You'll get a clear demonstration of different methods to display graphics; files handling techniques applied to both cassette and disk files; plus animation, games, and fun.

April 1981  
approx. 300 pp. \$9.95

Get maximum power from your micro by using assembly language

## INTRODUCTION TO 8080/8085 ASSEMBLY LANGUAGE PROGRAMMING

**Judi Fernandez & Ruth Ashley**  
Use your microcomputer to write fast, sophisticated, complex programs with the help of this guide, the only self-instructional book of its kind. You'll learn what machine language is, how to perform routine operations, input/output, conditional commands, machine language logic, stack routines, and more. Sample programs illustrate every technique and concept.

April 1981  
approx. 300 pp. \$8.95

How to perform complex, sophisticated operations with your micro

## 8080/Z80 ASSEMBLY LANGUAGE Techniques For Improved Programming

**Alan R. Miller**  
Now advanced and intermediate programmers can get the most response their micro is capable of generating with the help of this complete guide to programming the 8080 and Z80 microprocessors. Learn assembly language swiftly and easily by developing a powerful system monitor in a step-by-step, top-down approach. Ten indispensable appendices contain all the necessary material to write 8080 or Z80 assembly language programs.

Jan. 1981  
approx. 224 pp. \$9.95

Implement all functions provided by CP/M with this working tool

## USING CP/M®

**Judi N. Fernandez & Ruth Ashley**  
A complete, detailed introduction to the use of the Control Program/Microcomputers software package for maximum capability and efficiency with any hardware.

"A marvelous addition to the CP/M literature... I only wish that I had had the book when I was starting out!"

—Alan R. Miller, *New Mexico Tech* & Software Editor, *Interface Age*  
1980 243 pp. \$8.95

JOHN WILEY & SONS, Inc.

**Wiley Self-Teaching Guides also teach BASIC, COBOL, FORTRAN, Job Control Language, Flowcharting, and other computer skills.**

# ASSEMBLY LANGUAGE PACKAGE

**CREF-80 Cross Reference Facility**  
**Complete documentation**  
**Macro-80 Macro Assembler**  
**LINK-80 Linking Loader**  
**EDIT-80 Text Editor**

For TRS-80™ users who want assembly language programming capability

The TRS-80™ Assembly Language Development System from Microsoft is the perfect, low-cost package to help you get started with assembly language programming.

The macro assembler accepts Z-80 op-codes and supports a complete Intel standard macro facility including IRP, IRPC, REPEAT, local variables and EXITM ..... \$95.00

# FORTRAN PACKAGE

**FORTRAN Compiler**  
**LINK-80 Linking Loader**  
**EDIT-80 Text Editor**  
**FORUB Runtime Library**  
**Complete documentation**

For TRS-80™ users who want FORTRAN programming capability

Because FORTRAN is a popular language that has been around a long time, and because Microsoft's TRS-80™ FORTRAN is an ANSI Standard FORTRAN, users will instantly have access to the vast number of applications programs already written in FORTRAN. FORTRAN is the standard language used throughout the industry for scientific, mathematical, engineering, statistical and modeling programs. FORTRAN is probably the answer if Level II BASIC has presented any limitations for your applications. It's easy to interface directly to machine language subroutines. Double precision scientific functions are included. FORTRAN can support any I/O device, and because it's a compiler, FORTRAN is faster (3-10 times faster!) than BASIC. Floating points and I/O subroutines from FORTRAN's library may be incorporated in subroutines, plus users can create their own library of the subroutines used most often.

The TRS-80™ FORTRAN Package is fully compatible with TRSDOS. S-80 32K Disk ..... \$95.00

# STAR TREK III.5

**ALL NEW VERSION!**  
by Lance Micklus

Now with Sound Capability and Increased Speed of Execution.

You are in command of the starship Enterprise and her complement of 371 officers and crew. You must enter and explore the Omega VI region of the galaxy with its 192 quadrants containing star systems and planets (a few of which are habitable).

Astronomical hazards such as pulsars, Class 0 stars, and black holes are known to be present in the region. Klingon battle cruisers are also present, so the utmost care is needed.

Star Trek III.5 includes: playboard 8 by 3 by 3 quadrants; weapons system of Phasers and Photon Torpedos; Warp and Impulse power systems; Science and Ship's computers; Long and Short Range sensors; Damage Control and Status reports; and 20 Klingon battle cruisers, and 100 stars, planets, black holes, and pulsars.

Available on Digital Cassette for Level II, 16K ..... \$14.95

# MENU

## DISKETTE LIBRARY CASE:

Allows you to store up to 15 mini-diskettes in a strong molded plastic carrier.  
..... \$5.00

## SOUNDWARE

SOUNDWARE adds a whole new dimension to your computer games. Programs come alive with laser sounds, bounces, clicks, sirens, bird calls, music notes, tunes, and whatever else your imagination dreams up. Just slip in two AA batteries, plug into your computer, and have fun. SOUNDWARE SOFTWARE programs are also available to enhance the enjoyment of your computer. \$29.95

## DIGITAL CASSETTES

Premium quality digital recording tapes. These five-screw cassettes come packaged in boxes of ten. They are offered in 10 and 20 minute lengths.

- C-10 ..... \$6.95
- C-20 ..... \$7.95

## DISKETTES

### DYSAN:

104/1 One-sided single density (one side certified error free at single density of 3979 bpr.) In track and between track testing is performed to ensure that the entire recording surface of every disk is 100% error-free. Box of 5 diskettes ..... \$29.95

### BASF:

- Box of 10, 5 1/4" Single Density ..... \$34.95
- Box of 10, 5 1/4" Double Density ..... \$44.95
- Box of 10, 8" Double Density ..... \$49.95

## 3-M SCOTCH

Encased in a tough jacket which resists handling damages. 100% certified error-free performance. Low modulation provides better signal stability. Box of 10 ..... \$39.95

## DISKETTE HEAD CLEANING KIT:

3-M Scotch 7400 head cleaning kit is simple and easy to use. You simply saturate the write head cleaning fabric in the cleaning diskette with the cleaning solution, insert the diskette into the drive and turn it on. The rotating cleaning fabric alternately wipes the heads with the solution and the dry surface, removing contamination from the read write head. Each kit contains two cleaning diskettes which will allow you a total of 100 cleanings. .... \$29.95

## RECORDING HEAD TAPE ALIGNMENT KIT

It consists of a template for locating the adjustment screw. An alignment tape is also included and a special screwdriver as well. The kit will allow you to align the heads to an industrial standard, ensuring consistent loading results. .... \$9.95

## FLOPPY DISK SAVER

### PREVENTS:

- Computer drive's clamping hub from tearing disk's center hole;
- Coating removal, scuffing, dimpling;
- Data loss caused by improper rotation. .... \$14.95
- Refills ..... \$7.95

## FLOPPY ARMOR:

Prevents damages to your diskettes. These are high density, ultra lightweight polymer shipping envelopes. Pack of 5 ..... \$4.95

# Interlude

## The Ultimate Experience

by Syntonic Software Corporation

### HOW'S YOUR LOVE LIFE ?

A little dull around the edges? Routine? Predictable? Boring? Maybe all it needs is a little Interlude. Interlude is the most stimulating computer game ever conceived. It combines a computer interview, an innovative programming concept, and a one-of-a-kind manual to turn your love life into exciting, adventurous, delicious fun!

With over 100 Interludes, you can satisfy all levels of interest and desire. Each Interlude is fully described in the manual, and the more elaborate ones are detailed with regard to settings, props, and mood enhancing techniques. But we've saved a few super Interludes for that very special time when your interview indicates you're ready! At that time you will be introduced to one of several Interludes held secret within the computer. (When you learn secret Interlude #99, your love life may never be the same again!) Interlude can give you experiences you'll never forget. Are you ready for it?

# COMPUTER GRAPHICS

## THREE-DIMENSIONAL ROTATION

by Joan Truckenbrod

Using the microprocessor to create three-dimensional shapes and rotate them in space allows one to draw an object at any angle of rotation, or in any combination of rotations, and thus view the object from any perspective. Each perspective view provides different information about the shape or form. This is particularly important when attempting to visualize complex objects that are different on all sides. It is useful to provide different views of the object by rotating it simultaneously on the X, Y, and Z axes. Three-dimensional rotation of a figure creates complex three-dimensional images that cannot be easily visualized by an artist or designer without the aid of a device such as a color graphics system. As a figure or object turns in space, its shape and appearance change dramatically. Due to the wire-frame character of these drawings, the figure is constructed out of a set of geometric forms. These shapes and forms appear to be stretched or compressed in various directions as the figure is rotated in space. Consequently the

rotational process is a valuable tool for exploring and experimenting with new shapes and forms in the design process.

The wide range of shapes and forms that evolve as one figure is rotated in space illustrates one of the valuable aspects of the three-dimensional rotation process. This point is demonstrated in the diagram in Figure 1, which illustrates only a few of the numerous diverse forms that can be created by rotating a figure in space. All of the diagrams here were done with the rotation program that was discussed in the February issue of *SoftSide*. This diagram has 72 examples of sequentially rotated figures that appear to tumble in space in an animated fashion. A pyramid, as shown in Figure 2, has been simultaneously rotated on the X, Y, and Z axes. The pyramid is rotating in three directions at the same time. Horizontally, across the chart, the pyramid is rotated on the Y axis at 30° increments from the left to the right in the range from 30° to 360°. Vertically, beginning at the top of the chart, the figure is rotated around the X axis at 15° increments in the range from 15° to 90°. The Z rotations

are made on a diagonal, from the upper left-hand corner to the lower right-hand corner, at 15° increments ranging from 15° to 255°.

The chart in Figure 3 lists the X, Y and Z rotations for each of the corresponding drawings in the diagram in Figure 1. As the figure is rotated and redrawn on the two-dimensional screen, the visual forces such as balance, rhythm, proportion and directionality of the figure change. The shapes of the object change size and position, and the object may appear larger or smaller than it really is. Depending on these shapes, the implied motion and directional flow of the figure changes. Some figures appear to be static while others appear to be moving. In viewing these wire frame drawings, there can be some ambiguity in the three-dimensional character of the object. Color or gray values can be added to these drawings to clarify the appearance of each object. This method of image clarification will be illustrated in the next issue of *SoftSide* in conjunction with a discussion of perspective drawing techniques.

# MINI GOLF

by Mitch Voth

Apple translation by  
Steve Justus

**"Mini Golf" is an Apple program requiring at least 20K of RAM.**

This month's version of "Mini Golf" will delight you Apple users. Those of you who have mastered your pool tables will be that much better than the rest of us.

"Mini Golf" is an excellent representation of the good old nine-hole amusement park golf course. About the only thing lacking is the fresh air and waiting for the next group to move on.

To play "Mini Golf" you determine the angle of your shot by moving the right and left arrow keys. When you feel the angle is just right, press a number from one to nine (one being a soft tap and nine being a hard hit) to hit the ball. The difficulty of each hole increases as you go along.

Mini Golf Variables:

A: Misc. logic.

B1, B2, C1, C2, D1, D2: Variables used for moving the ball.

HH: How hard the ball is hit.

HM: Horizontal movement.

M1, M2: Movement indicators (for calculating angles).

NP: Number of players.

P: Par for each hole.

PT: Player's turn.

S(1-10): Score for each player.

S: Number of strokes per hole.

VM: Vertical movement.

Z\$(1-10): Player name\$.

# REVIEWS

## **ABM** from Muse

"ABM" is a visually exciting game, one at which you cannot win, only stave off disaster for an indefinite period of time. Essentially, you are the Air Defense Commander in charge of five Anti-ballistic Missile (ABM) bases located on the Atlantic Coast of the U.S.A. Some nameless enemy is lobbing nuclear missiles at you from an unknown locale off the top of your video screen. Your job is to knock those incoming missiles out of commission by firing your own missiles at them. Your ABMs are either 1 Kiloton Sprint missiles or 5 Kiloton Ajax missiles.

In order to guide your ABMs, you must use either game paddles or joysticks to locate a cross hair sight in the path of an incoming missile. Once the sight is in place, you launch a missile and try to blow the incoming mail to smithereens. Sound easy? Wait.

Among the faceless enemy's bag of tricks, there is a nifty fellow called a MIRV. That's Multiple Independently targetted Reentry Vehicle, for those who left your military reference books at the office. The MIRV does a neat little number after entering the picture, it plays amoeba and divides itself into several little missiles all going towards a different target. If you don't get it before it divides, you don't last a whole lot longer.

Sooner or later, the East Coast as represented by Boston, New York, Philadelphia, Washington D.C., Baltimore, and Richmond, gets wiped out. There's no way around this, the enemy has just as many, if not more, missiles than you do. My own private theory is that the enemy is located in Redondo Beach, California, but then I have definite Yankee leanings.

Once the Atlantic Seaboard has slowly sunk into the east, the video monitor displays the number of enemy missiles that you destroyed in your futile efforts to save the seat of government, the number of missiles you used in the aforementioned fruitless task, and your score.

"ABM" is a lot of fun, even if you're not from the West Coast. The graphics are excellent, the game is fast paced and unpredictable. In fact, the only drawback to the whole package is the fact that you cannot "win", you can only survive a little bit longer than you did before...and that is only a drawback if you choose to view it as such.

Oh yes, there is one other slight problem: It's highly addictive.

Dave Albert

## **GALAXY WARS** from Starcraft Inc. Distributed by Broderbund Software

This one should have been named "Fish in Space". Really, in order to win you must pilot a missile through an obstacle course of fish (!) and knock out alien saucers. "Galaxy Wars" is a Japanese import marketed by Broderbund Software, and it's quite a decent little arcade game. Only I found myself waiting for Mothra or Godzilla to rear up out of the schools of fish and take a swipe at my missile.

There are a few other disconcerting things about "Galaxy Wars", although none of them really detract from the program. For one, you have to turn your monitor on its side unless you prefer to visualize your missile as a bazooka shell. And then there are the choreographed little saucers all synchronized with the opening sound routine, calling to mind the June Taylor Dancers or a Busby Berkeley musical.

Perhaps these are not logical inconsistencies at all, but quite natural to the Oriental mind... if we Westerners buy the line about the moon being made of green cheese, why not swarms of fish roaming the astral pathways? Certainly there are no "rules" in fantasy space games, nor does there need to be a logical pattern. If the action is well-paced and the game entrancing, then who cares if there are seeming incongruities? And "Galaxy Wars" IS fun to play, as much fun as any Invaders-type game I have seen. Now if we

can just get the "lethal writhing electrical worms" from Space Invasion onto hooks...

Dave Albert

## **MONTY PLAYS MONOPOLY** from Personal Software

If you enjoy Monopoly, I think you'll enjoy Monty. As the name says, Monty plays Monopoly. And he plays it with a flourish that normally isn't found among his more human counterparts. (I say MORE human, because Monty is really a very warm, engaging sort of opponent.)

"Monty Plays Monopoly" is available in Apple and S-80 versions; I played it on the Apple.

The playing board is represented in colorful low-resolution graphics on the monitor, although you still need a regular Monopoly board game to play. Once you load "Monty", the program runs itself, beginning with a rendition of a few of the many tunes that you'll hear during the course of the game. After entering the names of the other players, and optionally placing some cash on Free Parking, the game gets under way.

"Monty" is controlled mainly through the game paddles, with keyboard input required from time to time. The program follows all the rules, including rent payments; mortgaging; buying and selling of houses and hotels; trading; bidding; doubles — and, of course, bankruptcy. All inputs are well-prompted and error-proofed.

Much of the program's appeal lies in its use of music and graphics. A different theme is played for each square on the board, sometimes accompanied by a graphics animation. And Monty's debonair face is displayed whenever it's his turn.

Of course, if you're like me and always have trouble finding Monopoly partners in the first place, then Monty's greatest appeal may well be his availability. Monty gets my recommendation as a more entertaining Monopoly player than most, and (what's even rarer) one who doesn't cheat.

Jon Voskuil

# NUMBER BATTLE

by David Bohlke

**"Number Battle" is an Atari program requiring at least 8K memory.**

With a blaze of psychedelic color and a cascading current of sound, the battle is underway!

The object of the game is to "capture" higher numbers on the playing field than your formidable opponent, the Atari. You are first asked to choose a level of difficulty from 1 to 5, with the higher levels giving you a tougher battle (and also taking a bit longer for each move). You then choose the number of colors you want to use, from 1 to 3. The computer will be printing a field of 79 numbers, and this input determines how many different colors it will use to print them. The significance is that the second color doubles the value of the number, and the third color triples it, adding to the challenge of the game. Finally, you are asked to choose either a random or symmetrical arrangement of numbers, and then the battle begins.

When the board is displayed, you will see an "H" and an "A" mixed in with the numbers, marking the starting locations for the Human and the Atari. You enter your move (up, down, right, or left) by moving the joystick in the appropriate direction and pressing the button. The number at that location (doubled or tripled if applicable) will be added to your score. You and the computer alternate turns until one of you tops the game score, which is determined by the chosen skill level. All this is accompanied by much flashing and beeping, to keep your senses as well as your intellect stimulated.

# Radio Shack's TRS-80™ Pocket Computer

**For Businessmen, Engineers, Scientists,  
Educators!**

Library of prerecorded programs available. Memory retains programs even with power off. Typewriter-format keyboard, 24-character LCD. 15 arithmetic functions, 10 digit accuracy. One of the most remarkable technological achievements of the decade! The TRS-80 Pocket Computer actually has most of the features of the famous Level I TRS-80 microcomputer in a pocketable 6 oz., 2 3/4 x 6 7/8 x 11/16" size. You can program it in BASIC or use the growing library of prerecorded programs for Business Statistics, Business Finance, Real Estate, Civil Engineering, Personal Finance, and Aviation. There's even an educational Math Drill and Games Pack for fun. Programs and data are retained even with power off. Case, long-life (300 hours) batteries included. Cassette interface included, connects Pocket Computer to cassette recorder for loading prerecorded software, storing and saving programs. Batteries extra. With cable. 26-3501 +

# BASF

We don't recommend that you sit on your new BASF disks, but we're packaging them so that they could take that kind of punishment.

When you buy our 5 1/4", 100% certified, single sided, single or double density disks, you will receive them in a handsome tan hard plastic library case at no extra cost. Each box contains ten disks of the highest quality, from the people that all but invented magnetic recording media.

The hard plastic library case ensures that your disks will remain well protected from the ravages of time, weather, children, and pets. No more flimsy cardboard boxes that fall apart within a few weeks!

Box of 10, 5 1/4" Single Density .....	\$34.95
Box of 10, 5 1/4" Double Density .....	\$44.95
Box of 10, 8" Double Density .....	\$49.95

TOLL FREE OUT-OF-STATE 1-800-258-1790

## CASSETTES

FROM

The cassettes used for recording data are composed of two parts: the cassette shell and the tape itself. The shell used in our cassettes is of premium quality and is solidly held together with five screws. The tape used in our cassettes is of the same type used by some studios for making master recordings. Our tapes have non-magnetic leader to avoid the confusion caused by some brands of tapes (so-called "leaderless" tapes) which have magnetic leader spliced to the rest of the tape, allowing data to drop at the splice point.

The cassettes we offer here have been chosen for the highest quality components consistent with a practical cost level.

Cassettes come packaged in boxes of 10. They are offered in 10 and 20 minute lengths.

C-10 .....	\$6.95
C-20 .....	\$7.95

# Satisfy your craving for invasion games

From

## INVASION

Now you can continue to play this popular arcade game even after you run out of quarters! Shoot down the invading aliens, but protect your guns from their bombs.

Great sound and graphics. (Sound requires external amplifier.)

16K Level II Cassette... \$9.95  
32K Disk..... \$14.95

From

**sensational software**

## SUPER INVASION

Fifty-five aliens advance and shower you with lethal, writhing electric worms. As you pick off the aliens one by one, they quicken their descent. They whiz across the screen, wearing away the parapets which are your only defense, coming closer to your level. SUPER INVASION is the original invasion game with the original moon creatures.

32K Apple II Cassette ..... \$19.95

From

**Big Five Software**

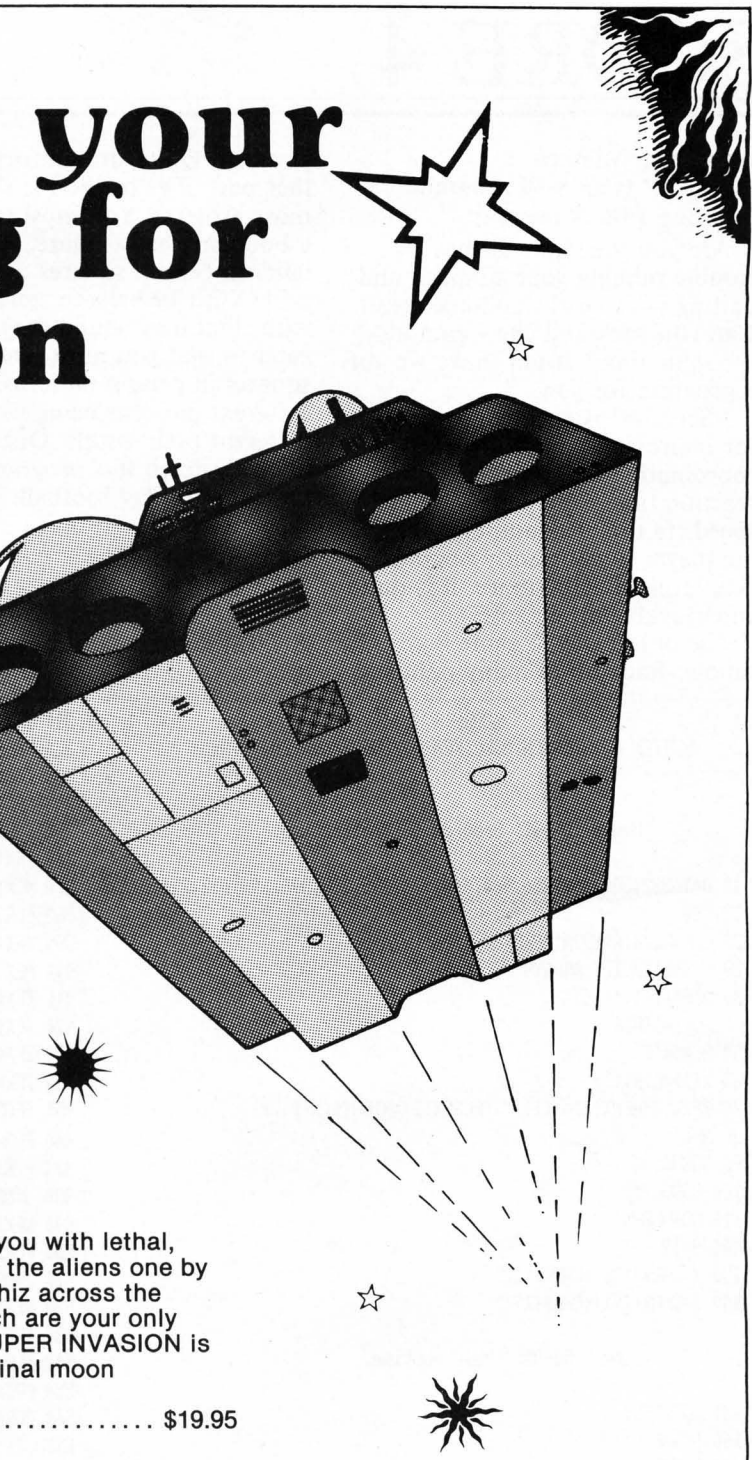

## GALAXY INVASION

Cruel and crafty invaders have been spotted in battle formation warping towards Earth at an incredible speed. Suddenly, your ship materializes just below the huge flock of invaders. But watch out! A few are breaking out of the convoy and flying straight at you!

16K S-80 Cassette ..... \$15.95

# SCORE 4

by Stephen Milliken  
**"Score 4" is an S-80 program  
 requiring 16K of memory.**

Are you the type that has trouble rubbing your stomach and patting your head simultaneously? Can you walk and chew gum at the same time? If not, have we got a program for you...

"Score 4" is a short program for improving hand-to-eye coordination and quickening reaction time. There are varying speeds in the program, enabling the player to constantly upgrade skill levels. Furthermore, it is quite an enjoyable little game.

The object of the game is simple: Rack up as many points as

you can. Quite straightforward, that part. The method is slightly more esoteric. You must try to get a bouncing ball (square, really) to land on certain squares within a grid. With 19 balls to start off with, that may sound easy. But the catch is that you must land on squares in certain patterns, different patterns being worth different point totals. Once you have mastered this program you'll be ready to play football...without a helmet.

Score 4 Variables:

A-U: Integers.

V-Z: Strings.

A(1-16): Screen positions of spaces.

N: Number of bounces left.

NE: New score.

P: Current position.

R: Next direction (-1 = left, 0 = same place, 1 = right, 4 = down).

S: Number of shots left.

SC: Score.

V: String containing sound routine.

W: String containing INKEY\$ and INPUT responses.

X(1-16): String containing the contents of space.

Y: String containing occupied graphics.

Z: Graphics string.

I, J, K, T: Miscellaneous. Used in loops and as temporary variables.

# HIDING YOUR CODE

## PART II

Last month we talked about editing your program lines to make them difficult to list. That method, however, is rather limited because it requires twice as much memory as your program would otherwise take.

This month we will talk a little about using control functions to make your programs even harder to list. You remember CHR\$(23), it puts your screen into the enlarged mode. Well, anything that's on the screen in the 64 character mode will lose every other letter when you switch into the enlarged mode. You can illustrate this by typing anything on the screen, pressing SHIFT-

Right Arrow, then printing CHR\$(28) (home cursor). By doing this you are entering a control character in the immediate mode.

You can put these control characters into your BASIC code by adding a REMark at the end of important lines, then an asterisk (\*). Here's an example:  
10 FORA = 1TO100:NEXTA>\*

This line will still function in the regular way. After editing the line, go back and find the location in memory where the asterisk actually

resides. Once found, POKE the address with a 23. Then list the line. The line automatically causes the computer to change into the enlarged format. By using different combinations of this technique, you can make it a real pain for anyone to alter or analyze your BASIC code. Below is a table of the control codes and their effects on a program during LISTing.

ASCII VALUE	RESULTS
23	EXPANDED MODE
28	HOME CURSOR
31	CLEAR TO E.O.S.
12	FORMFEED PRINTER IS LISTED

**"BLINK" — BASIC LINK FACILITY**

BLINK allows the user to run one BASIC program, and by executing one single command, transfer control to another BASIC program without losing variables in memory. 32K, Disk. . . . . \$25.00

**INFINITE BASIC**

Extends Level II BASIC with complete MATRIX functions and 50 more string functions. Includes RACET machine language sorts! Sort 1000 elements in nine seconds! (Mod 1) 16K Cassette or Disk. . . . . \$49.95

**INFINITE BUSINESS (Requires INFINITE BASIC)**

Complete printer pagination controls — auto headers, footers, and page numbers. Packed decimal arithmetic — 127 digit accuracy +, -, \*, /. Binary search of sorted and unsorted arrays. 16K Cassette . . . . . \$29.95

**REMODEL + PROLOAD**

Renummer all or any part of program (partial renumbering in the middle of program). Move any block of lines to new locations. Partial or complete tape merges — with renumbering on the way in! Save partial programs (common subroutines or data). (Mod 1) Specify Cassette or Disk; 16K, 32K, or 48K . . . . . \$34.95

**TIMSER**

Time Series Analysis (regression analysis). Nine different first, second, and third order curve fits. Screen curve and variance plots. Projections, R-squared, Durbin Watson, correction factors and functions. (Mod 1) 16K Cassette or Disk . . . . . \$14.95

**COMPROC**

Command Processor. Auto your disk to perform any sequence of instruction: DIR, FREE, pause, wait for user input, BASIC, number of FILES and MEM SIZE, RUN program, respond to input statements, BREAK, return to DOS, etc. Includes lower case driver software, debounce and screenprint! (Mod 1) 16K Cassette. . . . . \$19.95

**GSF**

Generalized Subroutine Facilities. Machine language — fast and powerful! Multi-key multi-variable and multi-key character string. Zero and move arrays. (Mod 1) Specify Cassette or Disk; 32K or 48K. . . . . \$24.95

**DOSORT**

Sequential file disk sort merge. Includes GSF. (Mod 1) Minimum 32K two-drive system. Specify 32K or 48K Disk. . . . . \$34.95

**DSM**

Disk Sort/Merge for RANDOM files. All machine language stand-alone package for sorting speed. Establish sort specification in simple BASIC command File. Execute from DOS. Handles multiple diskette files! Super fast sort times — improved disk I/O times make this the fastest Disk Sort/Merge available on Mod 1. Minimum two-drive system. 32K disk . . . . . \$75.00

# Put IRV on your programming staff!

from Programmer's Guild

IRV is faster than Level II BASIC! More powerful than a speed typist! Able to leap ten subroutines at a single bound!

Input shorthand — one keystroke can enter a whole line! The feature you liked in Level III BASIC and Tshort, now with all keys user programmable. You can even turn your cassette player on or off with a single keystroke.

Relocate a line by simply editing the line number — renumber lines individually.

Video Editor allows cursor oriented editing of your programs. Just move the flashing cursor to the line to be edited and type the corrections, insert, or delete.

IRV comes with manual and auto-repeat on every key.

16K, S-80 Cassette, Machine Language . . . . . \$24.95  
16K, S-80 Disk, Machine Language. . . . . \$29.95

# BIG APPLE ADVENTURE

by Christopher U. Light and Chris Light, Jr.

It was probably our tenth or eleventh trip into Colossal Cave, and it must have been about 2 a.m. We had come out of Bedquilt (again), tiptoed through the Soft Room and Y-2 and were hoping that this time we could get past the giant clam. Just one more try, we thought; maybe if we bring the black rod, we could pry the clam open. But it was very late, and we kept closing our eyes and suddenly jerking them open again. WEST, we ordered, holding open an eyelid with thumb and forefinger. WEST. The screen responded, YOU'RE AT COMPLEX JUNCTION. Our eyes closed, but our fingers continued typing.

SOUTH

YOU'RE IN A PARK. THERE ARE TREES AND GRASS HERE.

EAST

YOU'RE AT THE INTERSECTION OF OF A NORTH-SOUTH AVENUE AND AN EAST-WEST STREET. STEPS GO DOWN FROM HERE.

DOWN

YOU'RE ON A SUBWAY PLATFORM. THERE IS A TRAIN HERE.

BOARD TRAIN

YOU ARE ON THE TRAIN. THE TRAIN IS MOVING.

EXAMINE MAP

YOU CAN'T READ THE SUBWAY MAP. IT IS COVERED WITH GRAFFITI. YOU DON'T KNOW WHAT TRAIN YOU'RE ON. THE TRAIN IS MOVING.

SIT DOWN

ALL SEATS ARE TAKEN BY HEALTHY TEENAGERS WHO REFUSE TO MOVE FOR PREGNANT LADIES AND DISABLED WAR VETERANS. I DO NOT THINK THEY WILL MOVE FOR YOU. A CRAZY COMES INTO YOUR CAR AND THROWS A MEAT CLEAVER AT YOU. IT MISSES. THE TRAIN STOPS AT A STATION.

EXAMINE STATION

YOU CAN'T SEE OUT OF THE WINDOWS. THEY ARE COVERED WITH GRAFFITI. "ST 27" IS WRITTEN ALL OVER THEM IN STRANGE SCRIPT.

LEAVE TRAIN

YOU ARE ON A SUBWAY PLATFORM. THE SIGN ON THE WALL SAYS "14TH STREET-UNION SQUARE." A PICKPOCKET IS BEHIND YOU.

UP

THE PICKPOCKET WON'T LET YOU GO IN THAT DIRECTION. IF YOU ARE NOT CAREFUL, HE WILL STEAL YOUR WALLET AND THEN PUSH YOU IN FRONT OF THE NEXT TRAIN.

TAKE INVENTORY

YOU ARE CARRYING: AN EXPENSIVE PIGSKIN WALLET, \$127.80 IN CASH, A NATHAN'S HOT DOG, 8 SUBWAY TOKENS, A CAN OF MACE, A PIECE OF LINDY'S CHEESE CAKE, A HOTEL ROOM KEY, A BOTTLE OF MUSCATEL IN A BROWN PAPER BAG, A BANK PASSBOOK SHOWING AN ACCOUNT CONTAINING \$3,000, A BUS TICKET TO HOBOKEN AND AN AIRLINE TICKET BACK TO YOUR HOME TOWN.

SPRAY MACE

THE PICKPOCKET SCREAMS, COVERS HIS EYES WITH HIS HANDS AND STUMBLES AWAY.

BOARD TRAIN

YOU ARE ON A SUBWAY TRAIN. IT IS A LOCAL THAT MAKES FREQUENT STOPS.

EXAMINE TRAIN

YOU CAN'T SEE PAST THE GRAFFITI.

STOP TRAIN

THE TRAIN IS STOPPED AT A STATION.

LEAVE TRAIN

YOU ARE ON A SUBWAY PLATFORM. A SIGN ON THE WALL SAYS "GRAND CONCOURSE."

UP

YOU ARE IN THE SOUTH BRONX. THERE ARE ABANDONED BUILDINGS ALL AROUND YOU. THERE IS A CAN OF GASOLINE HERE. THERE ARE MATCHES HERE.

GET GASOLINE

OK.

GET MATCHES

OK.

POUR GASOLINE

THERE IS GASOLINE SOAKING INTO THE FLOOR OF A RED BRICK BUILDING.

LIGHT MATCH

THE BUILDING BURNS TO THE GROUND. THERE IS AN INSURANCE COMPANY CHECK FOR \$200,000 HERE.

GET CHECK

OK.

NORTH

YOU ARE IN YANKEE STADIUM. A MAN STANDING ON A LOW MOUND OF DIRT

continued on next page

HURLS A BASEBALL AT YOUR HEAD AT 100 MILES AN HOUR.

DUCK HEAD

THE BASEBALL MISSES YOUR HEAD. AN UMPIRE SHOUTS "BALL ONE." THE MAN HURLS ANOTHER BASEBALL AT YOUR HEAD, THIS TIME AT 110 MILES AN HOUR.

DUCK HEAD

THE BALL MISSES YOU AGAIN. AN UMPIRE SHOUTS, "BALL TWO." THE MAN THROWS ANOTHER BASEBALL AT YOU. THIS TIME I THINK IT IS GOING TO PASS IN FRONT OF YOU.

SWING BAT

YOU HIT THE BASEBALL AND KNOCK IT INTO THE UPPER DECK. A FAT, BALD-HEADED MAN SMOKING A CIGAR COMES OUT OF THE STANDS AND OFFERS YOU A CONTRACT TO PLAY FOR HIS TEAM FOR \$100,000 A YEAR.

GET CONTRACT

OK.

GO SUBWAY

YOU ARE ON A LEXINGTON AVENUE LOCAL HEADING SOUTH TO MANHATTAN.

STOP 59TH

YOUR TRAIN IS STOPPED AT THE 59TH STREET STATION. BELOW YOU ARE THE EXPRESS TRACKS. ABOVE YOU IS BLOOMINGDALES, A TRENDY DEPARTMENT STORE THAT IS OPEN LATE ON MONDAYS AND THURSDAYS.

UP

YOU ARE AT BLOOMINGDALES. IN THE STORE'S WINDOW ARE ANIMAL CAGES. IN THE CAGES ARE SEVEN LIONS, SIX GIRAFFES, FIVE CAMELS, FOUR ARMADILLOS, THREE FRENCH HENS, TWO TURTLE DOVES AND A PARTRIDGE IN A PEAR TREE.

GET CAMELS

ARE YOU KIDDING? THIS IS BLOOMINGDALES. THESE ANIMALS ARE REAL.

OUT

YOU ARE ON THE SIDEWALK AT 59TH STREET.

WEST

YOU ARE AT 5TH AVENUE.

SOUTH

YOU ARE IN FRONT OF TIFFANYS. IN THE WINDOW ARE MANY JEWELS AND A GIRL EATING BREAKFAST.

GET JEWELS

YOU CAN'T. THEY ARE IN THE DISPLAY WINDOW.

BREAK WINDOW

OK.

GET JEWELS

YOU HAVE THE JEWELS. A BURGLAR ALARM GOES OFF. A POLICEMAN COMES AROUND THE CORNER AND FIRES HIS .38 SPECIAL AT YOU. HE MISSES. THE GIRL SCREAMS AND DROPS HER BREAKFAST.

SOUTH

YOU ARE RUNNING DOWN THE MIDDLE OF 5TH AVENUE DODGING BUSES. FIVE POLICEMEN ARE CHASING YOU. THERE IS AN OPEN MANHOLE HERE.

DOWN

YOU ARE IN THE SEWER. A GIANT RAT IS THREATENING YOU. IT CARRIES BUBONIC PLAGUE.

UP

THE RAT WON'T LET YOU.

DOWN

YOU CAN'T GET PAST THE RAT.

DROP CHEESECAKE

THE RAT HAPPILY EATS YOUR PIECE OF LINDY'S CHEESE CAKE AND SCURRIES AWAY. POLICEMEN ARE SHOOTING THEIR .38 SPECIALS AT YOU THROUGH THE OPEN MANHOLE.

JUMP

YOU ARE SWIMMING OUT OF CONTROL IN A STREAM OF FILTH. AHEAD OF YOU THE SEWER DUMPS INTO THE EAST RIVER. ABOVE YOU IS AN OPEN MANHOLE.

UP

YOU ARE AT THE UNITED NATIONS. A GANG OF FOREIGN STUDENTS IS CHASING YOU. IF THEY CATCH YOU, THEY WILL HOLD YOU HOSTAGE IN THE NEAREST AUTOMAT UNTIL YOUR GOVERNMENT AGREES TO GIVE THEM THREE NUCLEAR AIRCRAFT CARRIERS, TEN H-BOMBS, 1,527 SUPERSONIC JET FIGHTERS, A LIFETIME SUPPLY OF PREPARATION-H FOR THEIR ALL-WISE, SUPREME LEADER, AND A NEW SUPREME LEADER TO REPLACE THE ONE THEY ASSASSINATED WHILE YOU WERE READING THIS SENTENCE.

WEST

YOU ARE AT 5TH AVENUE AND 42ND STREET. THE NEW YORK PUBLIC LIBRARY IS HERE. THERE ARE MANY RARE AND VALUABLE BOOKS IN THE LIBRARY.

GET BOOKS

YOU DON'T HAVE A LIBRARY CARD.

SOUTH

YOU ARE AT THE EMPIRE STATE BUILDING. AN ENORMOUS APE IS HOLDING ON TO THE TOP WITH ONE HAND AND IS REACHING DOWN TOWARD YOU WITH THE OTHER. HE IS SCREAMING AT YOU.

IN BUILDING

YOU ARE INSIDE THE EMPIRE STATE BUILDING. ELEVATORS GO UP FROM HERE.

UP

YOU ARE INSIDE AN ELEVATOR. THE ELEVATOR IS STOPPED AT THE 75TH FLOOR AND WILL NOT MOVE. THERE IS A BLACKOUT, AND THE ENTIRE CITY IS WITHOUT ELECTRICITY. YOU FEEL A HAND REACHING FOR YOUR WALLET.

UP

THE ELEVATOR WON'T MOVE. A HAND IS REACHING FOR YOUR WALLET.

OPEN DOOR

THE ELEVATOR DOOR WON'T OPEN. THERE IS A BLACKOUT THAT EXTENDS FROM YONKERS ON THE NORTH AND AMAGANSETT ON THE EAST TO ATLANTIC CITY ON THE SOUTH AND THE PINEY BARRENS ON THE WEST.

EXAMINE DOOR

ON THE OTHER SIDE OF THE DOOR ARE MEN WITH PRY BARS. MAYBE THEY ARE FIREMEN. PERHAPS THEY WILL SAVE YOU IF YOU ASK THEM POLITELY.

PLEASE HELP

THE DOORS OPEN, AND MEN CARRYING PRY BARS ENTER. THEY ARE NOT FIREMEN BUT LOOTERS WHO HAVE SPREAD OUT THROUGH THE CITY DURING THE BLACKOUT.

HIDE WALLET

YOUR WALLET IS HIDDEN. THE LOOTERS STEAL YOUR TIFFANYS' JEWELRY, YOUR NATHAN'S HOT DOG AND YOUR BASEBALL CONTRACT AND THEN DISAPPEAR. THE CURRENT COMES ON, AND THE ELEVATOR MOVES UP. YOU ARE ON THE 86TH FLOOR OBSERVATION DECK. A GIANT APE IS HANGING FROM THE TOP OF THE BUILDING WITH ONE HAND. HIS OTHER HAND IS REACHING TOWARD YOU.

KILL APE

WITH WHAT? YOUR BARE HANDS?

# Three from Potkin

Wargamer's delight

## 1). Kriegspiel II

A much improved two-player version of the original. Kriegspiel II is a wargamer's delight. Choose the number of mountains (up to 200) and pick a scenario from the 9,999 possible, and then watch the computer set up the pieces, towns, mountains and a river. To win, you must enter the capital city of your opponent or reduce his fighting strength to below half of your own

S-80 Level II, 16K cassette \$14.95

## 2). Up Periscope

The author of the popular Kriegspiel II has done it again. This time the action takes place at sea with one player controlling the submarines while the other attempts to sail around RADSHA Island, with at least three of his fleet surviving the attempt. This realistic wargame includes sonar, depth charges, and torpedos.

S-80 Level II, 16K cassette \$14.95

## 3). Warpath

The Indians are on the warpath! The Chief, along with 24 braves, is out to take the garrison at the fort, or at least to stop reinforcements from entering the stockade. The General, with his 14 troopers, is trying to relieve the garrison before the flag is captured. The player determines the scenario through placement of boulders that provide both shelter and obstacles. Favorite scenarios may be replayed.

S-80 Level II, 16K cassette \$14.95

# LET YOUR TRS-80™ TEACH YOU ASSEMBLY LANGUAGE

Introduction  
to TRS-80™  
Assembly  
Programming  
(Remassem - 1)

FROM  
REMSOFT, Inc.

REMsoft proudly announces a more efficient way, using your own TRS-80™, to learn the fundamentals of assembly language programming — at YOUR pace and at YOUR convenience.

Our unique package, "INTRODUCTION TO TRS-80 ASSEMBLY PROGRAMMING," will provide you with the following:

- Ten 45 minute lessons on audio cassette
- A driver program to make your TRS-80™ video monitor serve as a blackboard for the instructor.
- A textbook on TRS-80™ Assembly Language Programming
- Step-by-step dissection of complete and useful routines to test memory and to gain direct control over the keyboard, video monitor and printer.
- How to access and use powerful routines in your Level II ROM.

S-80 Level II Cassette ... \$69.95

continued from page 80

**DOWN**  
YOU CAN'T GO IN THAT DIRECTION. THE ELEVATOR IS ON THE FIRST FLOOR. THE APE'S HAND IS GETTING CLOSER. AN AIRPLANE LOST IN THE FOG IS FLYING TOWARD YOU. IF IT HITS THE BUILDING, THE ELEVATOR CABLES WILL BE SEVERED.

**UP**  
YOU CAN'T GO IN THAT DIRECTION. THE APE'S HAND IS VERY CLOSE. I CAN HEAR THE AIRPLANE'S ENGINES.

**WEST**  
NO WAY.  
**EAST**  
NO WAY.  
**SUMMON ELEVATOR**  
THERE IS AN ELEVATOR HERE.

**DOWN**  
YOU ARE AT 5TH AVENUE AND 33RD STREET. TWO TICKETS TO THE METROPOLITAN OPERA ARE LYING ON THE SIDEWALK. THE PERFORMANCE IS SCHEDULED TO START IN 30 MINUTES. PAVAROTTI WILL BE SINGING.

**GET TICKETS**  
OK.  
**GO OPERA**  
WHICH DIRECTION?  
**CONSULT MAP**  
I SEE NO MAP HERE. THE OPERA IS SCHEDULED TO START IN 25 MINUTES.

**WEST**  
YOU ARE AT BROADWAY AND 34TH STREET. STEPS GO DOWN FROM HERE.

**DOWN**

**YOU ARE IN A SUBWAY STATION. TRAINS GO OFF IN ALL DIRECTIONS:**  
NORTHEAST TO JAMAICA, SOUTHEAST TO CONEY ISLAND, EAST TO THE ROCKAWAYS, EAST TO JFK AND NORTH TO THE BRONX. THE OPERA IS SCHEDULED TO START IN 20 MINUTES.

**GO LINCOLN CENTER**  
YOU CAN'T GET THERE FROM HERE. YOU MUST CHANGE TRAINS.

**NORTH**  
YOU ARE ON AN "RR" TRAIN ON THE OLD B.M.T. LINE. THE LIGHTS DO NOT WORK. THE CEILING FANS ARE BROKEN. THE CAR LOOKS 75 YEARS OLD AND MAKES A CHUFF...CHUFF...CHUFFING SOUND. IT IS MOVING AT 5 MILES AN HOUR. I THINK IT WILL DIE SOON.

**OUT**  
YOU ARE AT THE TIMES SQUARE SUBWAY STATION. TRAINS GO OFF IN ALL DIRECTIONS: NORTHEAST TO ASTORIA, NORTHEAST TO FLUSHING, EAST TO FOREST HILLS, EAST TO GRAND CENTRAL, SOUTHEAST TO CONEY ISLAND, SOUTHEAST TO 95TH STREET (BROOKLYN), SOUTH TO SOUTH FERRY VIA CITY HALL, SOUTH TO SOUTH FERRY VIA WORLD TRADE CENTER, NORTH TO VAN CORTLAND PARK, AND NORTH TO 241ST (THE BRONX). THE OVERTURE IS SCHEDULED TO START IN 12 MINUTES.

**NORTH**  
YOU ARE ON A NORTHBOUND I.R.T. BROADWAY AND 7TH AVENUE TRAIN. THE TRAIN PASSES BY COLUMBUS CIRCLE WITHOUT STOPPING. IT SKIPS LINCOLN CENTER AT 66TH STREET...OH, DEAR, YOU SEEM TO HAVE GOTTEN ON AN EXPRESS...THE TRAIN STOPS AT 72ND STREET, BUT THE DOORS DO NOT OPEN. THE TRAIN IS NOW STOPPED AT 96TH STREET. IF YOU DO NOT GET OFF NOW, YOU WILL END UP IN HARLEM.

**OFF TRAIN**  
YOU ARE ON THE 96TH STREET SUBWAY PLATFORM. PAVAROTTI WILL BEGIN SINGING IN 7 MINUTES.

**SOUTH**  
YOU ARE ON A LOCAL I.R.T. SUBWAY TRAIN. OFF 66TH YOU ARE AT LINCOLN CENTER. THE OPERA IS SCHEDULED TO START IN 1 MINUTE.

**IN BUILDING**  
YOU CAN'T GO IN. THE MUSICIANS ARE ON STRIKE, AND THE OPERA HAS BEEN CANCELLED. PAVAROTTI HAS FLOWN TO CHICAGO TO SING THERE TONIGHT. YOUR TICKETS ARE WORTHLESS.

**DROP TICKETS**  
OK.  
**EAST**  
YOU ARE IN CENTRAL PARK. A SUSPICIOUS-LOOKING CHARACTER IS FOLLOWING YOU.

**EAST**  
THE CHARACTER THROWS A SWITCH-BLADE KNIFE AT YOU. IT MISSES.

**GET KNIFE**  
OK.  
**THROW KNIFE**  
THE KNIFE MISSES THE SUSPICIOUS CHARACTER AND KILLS A LITTLE OLD BAG LADY SITTING ON A BENCH FEEDING THE PIGEONS. THE CHARACTER RUNS AWAY.

**SOUTH**  
YOU ARE AT THE 6TH AVENUE AND 57TH STREET SUBWAY STATION. TRAINS GO FROM HERE TO JFK AND TO CONEY ISLAND.

**GO CONEY**  
YOU ARE AT CONEY ISLAND. TOWERING OVERHEAD IS A GIANT FERRIS WHEEL.

**WEST**  
YOU CAN'T GO IN THAT DIRECTION. THE FERRIS WHEEL IS IRRESISTABLE.

**EAST**  
YOU CAN'T. THE FERRIS WHEEL IS IRRESISTABLE.

**GO WHEEL**  
YOU ARE ON A GIANT FERRIS WHEEL. THE WHEEL HAS STOPPED WITH YOU AT THE VERY TOP.

**DOWN**  
THE WHEEL WON'T TURN. FLY DON'T BE RIDICULOUS.

**JUMP**  
DON'T BE SILLY. IF YOU WISH TO COMMIT SUICIDE, YOU MUST JUMP FROM THE BROOKLYN BRIDGE.

CLIMB DOWN  
OK. YOU'RE STANDING ON THE GROUND. THERE IS A NATHAN'S HOT DOG STAND HERE.  
TAKE INVENTORY  
YOU ARE CARRYING:  
EXPENSIVE PIGSKIN WALLET, \$127.80 IN CASH, 4 SUBWAY TOKENS, HOTEL ROOM KEY, BUS TICKET TO HOBOKEN, BOTTLE OF MUSCATEL IN A BROWN PAPER BAG, INSURANCE COMPANY CHECK FOR \$200,000, BANK PASSBOOK WITH \$3,000 IN ACCOUNT, RETURN PLANE TICKET TO HOME TOWN.  
GO BUS  
YOU ARE IN THE PORT AUTHORITY BUS STATION AT 8TH AVENUE AND 40TH STREET.  
GO HOBOKEN  
DON'T BE RIDICULOUS.  
GO HOBOKEN  
YOU DON'T KNOW WHAT YOU ARE SAYING. NO ONE HAS EVER RETURNED FROM HOBOKEN.  
EXAMINE TICKET  
YOU HAVE A ONE-WAY TICKET TO HOBOKEN. ROUND-TRIP TICKETS ARE NOT AVAILABLE.  
GO HOBOKEN  
YOU'LL BE SORRY. THERE IS NO RETURNING FROM HOBOKEN — EVER. ARE YOU SURE YOU WANT TO GO (YES OR NO)?  
NO  
CHICKEN! YOU ARE AT THE BUS STATION.  
EAST  
YOU ARE AT 40TH STREET AND 5TH AVENUE. A DOOR LEADS INTO THE NEW YORK PUBLIC LIBRARY. THERE ARE RARE AND VALUABLE BOOKS INSIDE.  
NORTH  
YOU ARE AT 47TH STREET. THERE ARE DIAMONDS ALL AROUND.  
GET DIAMONDS.  
HOW MUCH WILL YOU SPEND?  
INSURANCE CHECK  
OK. YOU NOW HAVE \$200,000 WORTH OF DIAMONDS.  
NORTH  
YOU ARE AT THE METROPOLITAN MUSEUM OF ART. THERE ARE VALUABLE PAINTINGS HERE.  
GET PAINTING  
I SEE MANY THOUSANDS OF PAINTINGS HERE.  
GET "GUERNICA."  
DON'T BE SILLY. PICASSO'S

"GUERNICA" IS IN SPAIN.  
GET "ARISTOTLE"  
REMBRANDT'S "ARISTOTLE CONTEMPLATING THE BUST OF HOMER" IS NOT FOR SALE. HOWEVER, FOR A SUITABLE DONATION THE MUSEUM MAY BE PERSUADED TO DEACCESSION IT.  
GIVE DIAMONDS  
THE MUSEUM ACKNOWLEDGES WITH DEEP APPRECIATION YOUR GENEROUS GIFT.  
GET "ARISTOTLE"  
THE MUSEUM WILL NOT DEACCESSION REMBRANDT'S "ARISTOTLE" FOR LESS THAN TEN MILLION DOLLARS. THE MUSEUM THANKS YOU FOR YOUR GIFT.  
RETURN DIAMONDS  
THE MUSEUM APPRECIATES YOUR GIFT.  
GET DIAMONDS  
YOUR GENEROUS GIFT IS GRATEFULLY APPRECIATED.  
RETRIEVE DIAMONDS  
YOUR GIFT WAS MOST GENEROUS.  
STEAL "ARISTOTLE"  
FIVE GUARDS ARE WATCHING YOU. IF YOU STEAL A PAINTING, YOU WILL BE TAKEN TO THE TOMBS AND WILL REMAIN THERE FOREVER BECAUSE THE CITY WILL MISLAY YOUR ARREST RECORDS.  
OUT  
YOU ARE AT 5TH AVENUE AND 82ND STREET.  
SOUTH  
YOU ARE AT WASHINGTON SQUARE IN GREENWICH VILLAGE. THERE IS A UNIVERSITY HERE. THERE IS A TRIUMPHAL ARCH HERE. THERE ARE HIPPIES HERE. THEY APPEAR HARMLESS. THE STREETS HERE ARE A MAZE OF TWISTY LITTLE PASSAGES.  
SOUTH  
YOU ARE AT CITY HALL.  
SOUTH  
YOU CAN'T GO IN THAT DIRECTION. A POLITICIAN IS BLOCKING YOUR PATH. HE HAS HIS HAND OUT.  
EAST  
THE POLITICIAN WON'T LET YOU. IT IS BEGINNING TO SNOW.  
WEST  
THE POLITICIAN IS IN THE WAY. HIS HAND IS OUT.  
GIVE \$50  
THE POLITICIAN SMILES AND ACCEPTS YOUR "CAMPAIGN CONTRIBUTION."

SOUTH  
THE POLITICIAN WON'T LET YOU. HIS HAND IS OUT. IT IS SNOWING.  
GIVE \$50  
THE POLITICIAN IS SATISFIED AND STEPS ASIDE.  
GET RECEIPT  
DON'T BE SILLY.  
SOUTH  
YOU ARE AT THE CORNER OF WALL STREET AND NAUSSAU STREET. THERE ARE MANY BANKS HERE. IT IS SNOWING HARDER.  
IN BANK  
IT IS A HOLIDAY. THE BANKS ARE CLOSED. YOUR BANK PASSBOOK SHOWING \$3,000 IN YOUR ACCOUNT IS WORTHLESS.  
DROP PASSBOOK  
OK.  
TAKE INVENTORY  
YOU ARE CARRYING:  
EXPENSIVE PIGSKIN WALLET, \$27.80 IN CASH, 2 SUBWAY TOKENS, HOTEL ROOM KEY, BOTTLE OF MUSCATEL IN A BROWN PAPER BAG, PLANE TICKET TO HOME TOWN. THE SNOW IS FALLING HARDER AND IS ACCUMULATING.  
HAIL TAXI  
17 CABS WITH PASSENGERS GO BY. 32 CABS WITH "OFF DUTY" SIGNS IGNORE YOU. THE SNOW IS NOW THREE INCHES DEEP.  
SOUTH  
YOU ARE AT SOUTH FERRY. BOATS GO FROM HERE TO STATEN ISLAND. SUBWAY TRAINS GO NORTH TO THE BRONX AND EAST TO BROOKLYN. THERE IS A HELICOPTER PORT HERE. THE STREETS TWIST AND TURN IN ALL DIRECTIONS.  
GO HELICOPTER  
YOU CAN'T.  
YOU DON'T HAVE ENOUGH MONEY, AND THE PILOT WON'T ACCEPT SUBWAY TOKENS.  
HAIL TAXI  
46 TAXIS WITH PASSENGERS PASS BY. 93 MORE WITH "OFF DUTY" SIGNS SPLASH SLUSH ON YOUR TROUSERS.  
WAVE MONEY  
NOTHING HAPPENS.  
WAVE MUSCATEL  
A TAXI IS STOPPED IN FRONT OF YOU.  
ENTER CAB  
YOU ARE SEATED IN A TAXI CAB.  
GO AIRPORT  
THE CAB DRIVER HEADS

continued on next page

NORTH ALONG THE EAST RIVER DRIVE TOWARD THE TRIBOROUGH BRIDGE. IT WOULD BE MUCH FASTER AND CHEAPER FOR YOU IF HE WOULD TAKE THE BROOKLYN BRIDGE AND ATLANTIC AVENUE TO KENNEDY AIRPORT.

TELL DRIVER

THE DRIVER CAN'T HEAR YOU THROUGH THE BULLET-PROOF GLASS SEPARATING THE BACK AND FRONT SEATS.

HIT GLASS

THE DRIVER IGNORES YOU. YOU ARE NOW ON THE TRIBOROUGH BRIDGE. IT IS STILL SNOWING HARD.

SMASH GLASS

YOU CAN'T. YOU ARE NOW ON GRAND CENTRAL PARKWAY PASSING LA GUARDIA AIRPORT. THE SNOW IS 4 INCHES DEEP, AND THE CAB IS CREEPING ALONG AT 10 MILES AN HOUR. ALL AROUND YOU ARE WRECKED CARS THAT HAVE SKIDDED OFF THE ROAD.

STOP CAB

THE DRIVER WON'T STOP AT LA GUARDIA AIRPORT. HE IS GOING TO TAKE YOU TO KENNEDY AIRPORT.

GO LAGUARDIA

THE DRIVER WON'T.

STOP

NOTHING HAPPENS. YOU ARE IN A TAXI MOVING AT 5 MILES AN HOUR ON THE VAN WYCK PARKWAY.

END

NOTHING HAPPENS.

ESCAPE

NOTHING HAPPENS.

RESET

NOTHING HAPPENS.

CONTROL C

THE PANIC BUTTON HAS BEEN DISABLED. YOU ARE HEADING SOUTH ON VAN WYCK PARKWAY IN 5 INCHES OF SNOW AT 0 MILES AN HOUR. YOUR CAB HAS BEEN STOPPED BY SNOW TWO MILES FROM KENNEDY AIRPORT. THE METER READS \$27.80

PAY DRIVER

OK.

OUT

THE DRIVER WON'T LET YOU. HE WANTS A TIP.

TIP DRIVER

WITH WHAT?

TAKE INVENTORY

YOU HAVE: EXPENSIVE PIGSKIN WALLET, HOTEL ROOM KEY, 2 SUBWAY TOKENS, PLANE TICKET BACK TO HOME TOWN,

BOTTLE OF MUSCATEL IN BROWN PAPER BAG.

GIVE WALLET

THE DRIVER TAKES YOUR EXPENSIVE WALLET.

OUT

THE DOOR WON'T OPEN.

GIVE KEY

OK.

OUT

YOU CAN'T GET OUT.

GIVE TOKENS

SCREAMING THREATS, THE DRIVER THROWS THE SUBWAY TOKENS IN YOUR FACE.

GIVE MUSCATEL

THE DRIVER UNLOCKS YOUR DOOR.

OUT

YOU ARE STANDING IN 15 INCHES OF SNOW IN THE MIDDLE OF THE VAN WYCK EXPRESSWAY. NO TRAFFIC MOVES. THERE ARE STALLED CARS IN EVERY DIRECTIONS.

SOUTH

YOU ARE SLOGGING THROUGH 2 FEET OF SNOW. THE NEWSCASTER ON A CAR RADIO NEAR YOU SAYS SOMETHING ABOUT "THE GREAT BLIZZARD OF '81."

SOUTH

YOU ARE AT JOHN F. KENNEDY INTERNATIONAL AIRPORT.

TAKE INVENTORY

YOU HAVE: AIRLINE TICKET BACK TO YOUR HOME TOWN.

GO COUNTER

YOU ARE AT THE AIRLINE'S CHECK-IN COUNTER.

PRESENT TICKET

THE AIRLINE DEMANDS AN EXTRA \$120. WHILE YOU WERE IN THE CITY, ALL THE AIRLINES WERE DEREGULATED TO INCREASE COMPETITION AND TO REDUCE AIR FARES.

UNFORTUNATELY, YOUR HOME TOWN IS SERVED BY A SINGLE, MONOPOLISTIC CARRIER THAT USED THE FUEL CRISIS AS AN EXCUSE TO RAISE FARES. THE CLERK CHECKS THE COMPUTER AND FINDS THAT YOUR FARE HAS RISEN WHILE YOU HAVE BEEN TALKING TO HIM. HE NOW WANTS \$150.

HELP

YOUR POCKETS ARE EMPTY. YOU HAVE NO MONEY. ALL YOU HAVE ARE A TICKET THAT WILL GET YOU HOME IF YOU SPEND ANOTHER \$175 (FARES HAVE RISEN AGAIN) AND YOUR SOUL. PERHAPS THE AIRLINE WILL ACCEPT THAT.

PLEDGE SOUL

SMILING BROADLY, THE PRESIDENT OF THE AIRLINE APPEARS BEHIND THE COUNTER, SHAKES YOUR HAND AND GIVES YOU A BOARDING PASS IN EXCHANGE FOR A PROMISSORY NOTE ON YOUR SOUL.

GO GATE

YOU ARE AT THE BOARDING GATE.

BOARD PLANE

YOU CAN'T. THE RUNWAYS ARE COVERED WITH 6 FEET OF SNOW. NO PLANES CAN LAND OR TAKE OFF.

SIT DOWN

ALL SEATS ARE FILLED WITH SLEEPING PASSENGERS. YOU ARE GETTING VERY THIRSTY, VERY HUNGRY AND VERY TIRED.

GO RESTAURANT

YOU ARE AT THE AIRPORT RESTAURANT, BUT IT IS CLOSED. IT RAN OUT OF FOOD TWO HOURS AGO. THIS IS THE GREAT BLIZZARD OF '81. YOUR FEET HURT. YOU ARE HUNGRY

AND THIRSTY.

RETURN HOTEL  
YOU CAN'T. THE CAB DRIVER  
HAS YOUR HOTEL KEY.  
GO SUBWAY  
YOU CAN'T. YOU HAVE NO  
SUBWAY TOKENS.

NORTH  
YOUR FEET HURT TOO MUCH  
TO WALK.  
SIT DOWN  
ALL CHAIRS ARE ALREADY  
TAKEN. YOU MUST STAND.  
LIE FLOOR  
THE FLOOR IS COMPLETELY  
COVERED WITH SLEEPING  
PASSENGERS. YOU MUST  
STAND.

GO COUNTER  
YOU ARE AT THE AIRLINE'S  
CHECK-IN COUNTER.  
ENQUIRE FLIGHT  
DON'T BE RIDICULOUS.  
AIRLINE PERSONNEL WON'T  
TELL YOU WHAT'S GOING ON.

RETRIEVE NOTE  
WHAT!...ARE YOU SERIOUS?  
THAT'S THE MOST  
OUTRAGEOUS COMMAND I'VE  
EVER BEEN GIVEN. ONCE

YOU'VE PLEDGED YOUR  
SOUL...WHY...NOW YOU'VE  
DONE IT. YOU'VE MADE ME  
START LAUGHING SO HARD I  
CAN'T STOP.

TAKE INVENTORY  
YOU HAVE NOTHING.  
EXAMINE SURROUNDINGS  
YOU ARE AT KENNEDY  
AIRPORT. THE RUNWAYS ARE  
COVERED WITH 12 FEET OF  
SNOW. THE TOPS OF A BIG  
APPLE AND A GIANT CLAM ARE  
JUST VISIBLE ABOVE THE  
SNOW. MUGGERS ARE  
THREATENING YOU WITH  
THEIR SWITCH-BLADE KNIVES.  
TERRORISTS HAVE PLACED  
BOMBS IN THE COIN LOCKERS.  
NASTY LITTLE DWARVES ARE  
THROWING AXES AT YOU.  
THERE IS A FAINT YELLOW  
LIGHT IN THE EAST.

GO EAST  
YOU ARE IN A TUNNEL  
UNDER 50 FEET OF SNOW. IT IS  
THE BLIZZARD OF '81. ABOVE  
YOUR HEAD YOU CAN HEAR  
THE GIANT CLAM TAKE A HUGE  
BITE OUT OF THE BIG APPLE.  
WISPY MISTS FILL THE TUNNEL.  
A NASTY DWARF COMES OUT  
OF THE GLOOM AND THROWS  
AN AXE AT YOU. IT MISSES. A  
POLICEMAN RECOGNIZES YOU  
AS THE TIFFANY BURGLAR AND  
SHOOTS HIS .38 SPECIAL AT  
YOU. HE MISSES. THE SUBWAY

CRAZY APPEARS AND THROWS  
A MEAT CLEAVER AT YOU. IT  
MISSES. BEHIND YOU A  
TERRORIST'S BOMB GOES OFF.  
YOU ARE UNHARMED. THE  
YELLOW LIGHT IN THE EAST IS  
BRIGHTER.

EAST  
A CLEAVER JUST MISSES  
YOUR HEAD. AN AXE JUST  
MISSES YOUR KNEE.  
EAST  
A BULLET NICKS YOUR  
SHOULDER. A RAT CARRYING  
BUBONIC PLAGUE SLITHERS  
OVER YOUR FOOT.

EAST  
YOU ARE AT A JUNCTION. A  
SIGN ON THE WALL READS,  
"TO HOBOKEN." ITS POINTER  
IS MISSING. BULLETS RICOCHET  
AROUND YOU. CLEAVERS AND  
AXES FLY PAST YOUR HEAD.

EAST...East...East. The yellow  
light grew very strong. We rubbed  
open our eyes and looked out the  
window at the dawn. Normally  
Adventure was just a good game  
with make believe snakes and  
birds and trolls and pirates. But  
last night — that was too real. It  
was truly frightening. We looked  
at each other and vowed never to  
boot that disk again. "Not for  
anything," we agreed. But we  
know we'll be back — at least one  
more time. After all, we have to  
retrieve that promissory note,  
don't we?

COMPUTER SHOPPER, the new buy, sell, and trade publication, is ready to help you with the latest information on personal, small business and large-system computers, accessories and software.

Each ad-packed issue is full of bargains you are looking for. Included are ads from individuals throughout the United States who are selling their good, pre-owned equipment just so they can trade-up to new equipment coming on the market.

But, COMPUTER SHOPPER'S bargains won't be yours unless you subscribe. This useful, money-saving publication can become your way to communicate with other buyers, sellers, and traders all over the nation.

Whether you are a hobbyist or a part-time user, COMPUTER SHOPPER will put you in touch with the nationwide computer marketplace in time for you to take advantage of bargain opportunities.

Have something to sell? A COMPUTER SHOPPER subscriber probably wants to buy it.

Looking for a part, component or even a complete system? A COMPUTER SHOPPER subscriber probably wants to sell it.

COMPUTER SHOPPER is THE marketplace for anything in computers and is read by thousands of people who are ready to buy.

COMPUTER SHOPPER offers a unique format in which classified ads are categorized for fast location of specific items. Combining this with low individual ad rates — 10, cents a word —

makes it the ideal place for buyers and sellers to communicate. And, its mix of individual, dealer, and manufacturer ads enable subscribers to find what they want at the best price possible.

COMPUTER SHOPPER will work for you in other ways, too. If you are just thinking about getting into computers, it can help you learn product availability and prices before you make a decision. And, through the timely ads, COMPUTER SHOPPER will keep you abreast of changes in the market which could create bargain opportunities for you.

BUT COMPUTER SHOPPER cannot work for you unless you subscribe.

Want to look us over first? We'll give you your first issue FREE and then bill you for the next 12. If you are not convinced COMPUTER SHOPPER suits your needs, just write "cancel" on the invoice and return it.

And, to let COMPUTER SHOPPER start working for you right now, with a paid subscription we'll also give you a FREE classified ad to sell your pre-owned equipment or to find equipment you want.

If you don't need to use the free classified ad now, use it anytime during your subscription.

Subscription: \$10/year, 12 issues plus your first free one. Bank cards accepted. Money back guarantee.

# HARDWARE CORNER

by Edward E. Umlor

As promised last month, we are going to talk about cassette recorders and the different data formats. Next month we are going to talk about disk drives and cables from different sources. Kind of a "how to" or "which end of the cable" thing.

Cassette recorder definitions:

**Azimuth alignment:** This sets the gap in the record/play head perpendicular to the edge of the tape. This is the way the signals are recorded on the tape itself.

**Tape speed:** 1 7/8 inches per second. If the speed varies too much the computer can not hear the data.

**Pinch roller:** The rubber wheel that presses the tape against the capstan shaft.

**Capstan shaft:** The metal shaft that is rotating and drives the tape through the recorder.

**Erase head:** The small head (usually white) that the tape passes over before reaching the record/play head.

The care and feeding of the cassette recorder is not difficult, but some preventive maintenance is necessary for long-term ease of loading tapes. Every one to two weeks (more often if heavily used) you should clean the heads and pinch roller. This is done using a cotton swab and denatured alcohol (or a cleaner designed specifically for cassette recorders). Press the play button, and lightly wipe the erase and record/play heads. Wipe the pinch roller by gently rotating the swab and using an up and down motion. This may sound like your leg is being pulled, but one particle of cigarette smoke is enough (when in just the right place) to cause a bad load. It changes the distance that the tape

is from the head, which changes the output amplitude of the recorder. Cleanliness is next to accurate loads. The azimuth should be aligned at least once a year, and again, this depends upon the usage. This should be done professionally, or if you know what it's all about, any good audio shop should be able to sell you a azimuth alignment tape. This is a standard for the industry and alignment tapes will not vary enough to create a problem.

If the above is observed on a regular basis, you will encounter minimal loading problems. There are several factors that affect loading: 1) amplitude or volume setting, 2) tape speed too fast or slow, 3) dirty heads, 4) improper procedure for the type of computer, and 5) a bad tape. The Tandy computers are noted for having finicky ears. You usually have to try several times to find the correct volume (amplitude) setting for successful loading. Once found, I would recommend that the tape be marked with this setting for the next time you want to load it. However, this problem can be found to exist on any computer cassette interface. Tape speed is about the very last problem you will encounter. Most cassette recorders used with microcomputers are fixed-speed units and either run at a constant speed or don't at all. If you suspect this is a problem, any good audio shop with repair facilities can check it out for you. Dirty heads, etc. have already been covered, and there will be some tape that has bad spots and causes dropped bits. After all, it is a man-made medium, and thus it is not perfect. This leads us to loading procedures for different types of computers.

## TRS-80™

Tandy computers do not have a time out associated with the cassette interface. This means that you can start a load and do a rewind, then press PLAY without a time error occurring. This procedure will apply for both Model I Level II and Model III. Set the volume control to about 5 (this is approximately the center of

the advertised load range). Type CLOAD (for a BASIC program) or type SYSTEM then FILENAME (for a Machine Language program) and press ENTER. Press PLAY on the recorder and wait about 30 seconds for the asterisks to appear in the top right corner of the video. If they do not appear, remove the black plug from the earphone jack. If the sound is loud, then reduce the volume by one number value at a time, and restart the load. If the sound is soft, then increase the volume by one number value at a time and restart the load. The indication of proper loading is the left asterisk on solid and the right asterisk blinking at a varying rate. When you get this response and the program will not run (syntax error, etc.), change the volume by 1/2 number value — first one way for a couple of tries, then the opposite way (from the original start value) a couple of tries until a good load is achieved. **BE SURE TO MARK THIS VOLUME SETTING ON THE TAPE!!** I don't know of anyone who likes to constantly fish for the right volume. Model I keyboards that have the Tandy easy-load modification usually load at a higher volume (start with a volume of 7).

## APPLE

The Apple is a different ball game. This computer does have a timing circuit and will beep an error after 15 seconds without receiving any leader tone. The standard load procedure here is to leave the plug out of the earphone jack, type LOAD, and press PLAY. When you hear the leader tone, insert the plug into the earphone jack and press RETURN. The tape should load correctly at between 4 and 7 volume with the tone at 10 or highest pitch. There are two BASICs for the Apple and you have to be careful about the tape program being in the correct BASIC. Applesoft will not load an Integer BASIC program nor will Integer BASIC load an Applesoft BASIC program. If all is going well, you will hear a short beep

# WHAT'S NEW

by Edward E. Umlor

## HARDWARE

The Model III from Tandy has some good features and some bad. One of the bad things is the availability of the computer with all the options you might want. Many outlets have yet to receive a "III" with disk drives, and right now there seems to be a shortage of computers. However, this computer is a more nicely packaged unit than the "I" and has several good additions.

The cassette port is new in this machine and tends to load at a lower volume level than the "I". You have a choice of speeds (L) for 500 baud (bits per second) or (H) for 1500 baud. The 1500 baud format is totally different than the 500 baud of the "I". Being the guy responsible for tape duplication, I was interested in the data format. **DO NOT SAVE DATA ON TAPE AND EXPECT IT TO BE 1500 BAUD.** When using `PRINT #-1`, the data is dumped to the cassette at 500 BAUD ONLY. I was very surprised at this and poked the location for high speed to no avail. Tandy really missed the boat on that one. If you have "I" tapes that run on your "III", you can convert them (BASIC programs that is) to high speed in the following manner:

`LOAD PROGRAM` using normal low speed format.

`CHANGE CASSETTE PORT SPEED` by using `POKE 16913,1`.

`CSAVE` program in normal fashion.

This will give you a high speed version of a "I" tape. The pokes are `POKE 16913,0` for slow (500 baud) and `POKE 16913,1` for high speed (1500 baud).

The hardware functions well and most "I" BASIC programs will run on the "III". I am looking forward to receiving a system with disk and other options. In the future, when I do have something more to talk about, I will be reviewing this hardware again.

## SOFTWARE

The subject for this month is "Super-Utility". This software package is distributed on disk and is primarily for disk users. It is a collection of several programs for working data, files, and organization of your disk library. The package does include one tape utility called tape copy. Let's take the utilities one at a time.

**Zap Utility** is another program for modifying data by sector on your disk. Its features and operation are reminiscent of "Superzap". The display is nearly the same, and the different modes of operation are the same with the addition of string search and sector search. The modes are called up with single key strokes and the byte being modified is marked more plainly. A nice addition, if you don't have a zap already.

**Purge Utility** is a utility for cleaning up a used diskette. You can kill files, zero out unused space (killed files), clean up directory space freed (zero out), remove passwords, and several other manipulations. There are several other purge routines on the market (usually with a DOS), but again the utility has been expanded and enhanced.

**Disk Format Utility** allows for standard or special formatting of your disk. It is another utility present on most operating systems that has been expanded and enhanced. This will allow for a format like TRSDOS with all the questions asked. You can format a disk without erase and save the data that is still on the disk. If those are not good enough, it will let you format in any track with a special name and place any number on the sector in a NON-SEQUENTIAL numbering scheme. That's one way to keep other people from getting at your disk data. You can even read a disk for tack and sector format with this utility. The changes and enhancements in

this program are not duplicated by any other FORMAT program I am aware of.

**Tape Copy Utility** is the one and only tape routine in this package. It is not what one would think. The data is not read into the computer and then written to the destination tape as in most copy utilities. The function of this one is to read the source tape, turn on the output at the same time, and write to the destination as data is read in. This is why they claim to copy any tape regardless of protection. You are actually doing a cassette to cassette copy using the cassette port to clean up the signal (acts like a data dubber). One of the nice things about this, is the use of only one cassette cable from the keyboard to the TWO cassette recorders. The black plug goes into the EAR in the source recorder and the large gray plug into the AUX of the destination recorder. **DO NOT HIT THE 'BREAK' UNTIL THE FLASHING BLOCK STOPS FLASHING.** If you do, you will stop the copying of your tape in the middle.

**Disk Repair Utility** is the true new utility in this package, and is a well written, very useful program to the serious disk user. We have all had the TANDY ZAP applied to our diskettes at one time or another. This program will restore GAT tables, HIT tables, killed files, and BOOT. This utility does a very good job most of the time. When working with it, there were some files restored with direct statements in file. This, as you know, will not let you load and run that program. I feel that the problem is more in how badly zapped the file is, than in the way the program does its restoring. If you can save even one fully utilized data disk, this utility is worth it.

In summary, "Super-Utility" is a potpourri of utilities that are very useful to the computer user. Being a collection of utilities, the price asked is not bad at all. I would recommend this package for Disk Repair and Format only. The documentation is sufficient and well written. Like most programs of this type, you will continue to discover new ways of using it. 

# FANTASY AT YOUR FINGERTIPS

FROM

## TEMPLE OF APSHAI

Limber up your sword arm and don your breastplate for a journey to an underground dungeon loaded with fierce monsters and exotic treasures. Equip your character and head for the subterranean ruins of an insect-worshipping culture.

S-80 Cassette: 16K, Level II ..... \$24.95  
 S-80 Disk: 32K, TRSDOS ..... \$29.95  
 APPLE Disk: 48K with APPLESOFT in ROM ..... \$29.95  
 PET Cassette: 32K (old or new ROMs) ..... \$24.95

## DATESTONES OF RYN

Rex the Reaver and his band of cutthroats have absconded with the precious datestones from the ducal calendar and your job is to recover them. Not only must you explore the cavernous lair of the robber band, but you must also face an assortment of monsters all hungering for your blood.

S-80 Cassette: 16K, Level II ..... \$14.95  
 S-80 Disk: 32K, TRSDOS ..... \$19.95  
 APPLE Cassette: 32K with APPLESOFT in ROM or 48K with APPLESOFT on cassette ..... \$14.95  
 APPLE Disk: 48K with APPLESOFT in ROM ..... \$19.95  
 PET Cassette: 16K (old or new ROMs) ..... \$14.95

## MORLOC'S TOWER

You have to thwart the evil necromancer Morloc, who has vowed to destroy your hometown of Hagedorn at the rise of the new moon tonight!

S-80 Cassette: 16K Level II ..... \$14.95  
 S-80 Disk: 32K ..... \$19.95  
 APPLE Cassette: 32K with APPLESOFT in ROM or 48K with APPLESOFT on cassette ..... \$14.95  
 APPLE Disk: 48K with APPLESOFT in ROM ..... \$19.95  
 PET Cassette: 20K (old or new ROMs) ..... \$14.95

## STARFLEET ORION

Starfleet Orion provides you with the framework of space combat and a dozen scenarios to choose from. Exhaust those scenarios and you can begin to create your own. Your own imagination is your only limit.

S-80 Cassette: 16K Level II ..... \$19.95  
 S-80 Disk: 32K ..... \$24.95  
 APPLE Cassette: 16K or 32K with integer BASIC in ROM (2 program versions supplied) ..... \$19.95  
 APPLE Disk: 32K with integer BASIC in ROM ..... \$24.95  
 PET Cassette: 8K (old or new ROMs) ..... \$19.95

## INVASION ORION

Your computer would like to battle you in outer space. You name the time, place, and scenario, the computer will take you on, no questions asked. You command a starfleet and must pit all of your tactical skills to stay on top of your opponent.

S-80 Cassette: 16K, Level II ..... \$19.95  
 S-80 Disk: 32K ..... \$24.95  
 APPLE Cassette: 32K with APPLESOFT in ROM ..... \$19.95  
 APPLE Disk: 48K with APPLESOFT in ROM ..... \$24.95  
 PET Cassette: 16K (old or new ROMs) ..... \$19.95

## RESCUE AT RIGEL

You are entrusted with the rescue of human hostages who have been seized by the High Tollah and are being held on a secret base circling the planet Rigel where dastardly experiments are being performed upon them.

S-80 Cassette: 16K Level II ..... \$19.95  
 S-80 Disk: 32K ..... \$24.95  
 APPLE Cassette: 32K with APPLESOFT in ROM or 48K with APPLESOFT on cassette ..... \$19.95  
 APPLE Disk: 48K with APPLESOFT in ROM ..... \$24.95  
 PET Cassette: 20K (old or new ROMs) ..... \$19.95

## HELLFIRE WARRIOR

Four more levels of dungeon have been discovered beneath the Temple of Apschai region. These four levels are populated by Undead, Demons, and an assortment of thoroughly nasty types. There is also a good deal of treasure down there, but not many have survived to report about it.

S-80 Cassette: 16K Level II ..... \$24.95  
 S-80 Disk: 32K ..... \$29.95  
 APPLE Disk: 48K with APPLESOFT in ROM ..... \$29.95

 TOLL FREE OUT-OF-STATE 1-800-258-1790

(without an error message) as the program starts to load, and another when the load is finished (the cursor will also reappear). The Apple is a more tolerant, faster, and easier machine to load through the cassette port.

### ATARI

The Atari also has a timing circuit and loves to give error 138. The Atari recorder does not allow you to play the tape to find the start of the leader tone. You will have to use the FAST FORWARD to indent to the leader tone. You can get a general idea of how far into the tape it is by using another recorder to cue the tape. With the tape cued, type CLOAD and press RETURN. There will be a single beep; press PLAY on the recorder, and RETURN. The tape will start running and loading. You might or might not hear data loading through the TV speaker. The key to loading the Atari is to be sure the cassette is cued to the right place and the recorder is kept

clean. There isn't any volume adjustment that can be made. The SoftSide tapes are indented a count of 13 on the recorder. Put the tape into the recorder, rewind, zero the counter, and fast forward to a count of 13. This should allow the first program to load, and a space of three counts separate each of the programs.

As promised last month, here is a capsule of how we duplicate our tapes. The key to any production line is the quality of the equipment used, as well as the expertise with which it is handled. The masters are made on professional recorders with special signal processing being done between the machine and the recorder. This is done to optimize the final result. The duplicators we use run at 16 times normal speed (30 inches per second). Due to the high speed, there is a start-up and a slowdown time. The first program on each side of the tape is indented about 30 seconds (at normal speed). This is done to keep the actual data in the most linear portion of the duplicating cycle. Now you know why there is a long

wait before the start of load with the SoftSide cassettes.

I hope that this will answer some of your questions as to why some tapes load with difficulty. The amplitude of the signal on the tape, the way it is recorded, the playback recorder alignment and cleanliness, and many other minor factors like temperature and humidity can effect loading. There is one more item on the Tandy units: using the same recorder and cassette cable, the program tape DOES NOT LOAD AT THE SAME VOLUME RANGE from machine to machine. The primary cause of that is the tolerances of the components used. In some machines the pluses balance the minuses, in some machines they are heavy on the plus side, and in others they are heavy on the minus side. What tangled webs we weave when first we go to high technology toys.

Well, I guess old Granite Knoggin has bent your eyeballs enough for this time. Write in if you have specific questions about the hardware, and in future articles we'll answer as many as possible.

The tension mounts as the aliens get closer and closer . . . . Your barriers are rapidly vanishing and you're running short on ammo . . . But you think you can obliterate the rest of them before they get to you. For weeks you've been practicing for this moment. Zap! Too bad, they got you. So you dig into your pocket for another quarter. Alas, you don't have any more quarters. Do yourself a favor. Don't let this happen to you. Save up your quarters until you have 120 of them, then buy ARCADE CLASSICS. Not only do you have unlimited aliens to wipe out, but you get three more exciting games to play! ARCADE CLASSICS comes with "Cosmic Raiders," multi-speed "Pinball," "Ricochet," and "Blockade." Each game provides you with countless hours of fun and thrill. At 30 quarters a game, it's a wise investment.

S-80, 4K, Level I or II Cassette . . . . . \$29.95

# ATARI MEMORY UPGRADE

by Paul Johnson

**This article explains an 8K to 16K conversion for the CX852 memory module in the Atari 800.**

**IMPORTANT** — This modification is only known to work with a properly-functioning REV. 3 memory module (PC Board number CO12987). Perform the following steps to ascertain that your memory module is of the correct type before proceeding:

Turn off the power to your computer and any peripherals.

Open the cartridge compartment door, release the two latches, and remove the top cover by sliding it up and towards you.

Carefully slide the 8K memory module out of its slot. If you have other memory modules installed, remove them as well, for the present.

Leave the 10K ROM Operating System module in place.

Examine the 8K module that you have chosen to upgrade. You will notice two Phillips screws holding it closed. Remove them and put them aside. Pry off the metal plate to expose the PC Board inside.

Holding the module with the edge connector toward you, you should see a Rev. number and part number printed on the board. If the Rev. number is not "3" or the board number is not "CO12987", do not attempt this upgrade — it may not work. If, however, your module is of the proper type, you can, following the instructions below, double the memory of your module quickly, easily, and at very low cost.

Parts required:

- 8 — 4116 dynamic RAM chips (Available from Hardside — Part #5-1102)
- 1 — piece insulated wire, approximately 2.5 inches long, 22 gauge or finer.
- 4 — leads from any 1/8 watt resistor, diode, or the like, to serve as uninsulated jumper wires

Tools required:

- Phillips screwdriver
- Wire stripper/cutters
- 50-watt or lower soldering iron with fine tip

Fine, ROSIN-CORE (only!!!) solder  
X-acto or similar knife  
Desoldering wick or vacuum bulb

Conversion instructions:

1) Set up at a clean, well-lit work surface, preferably not in a carpeted area. (You will be handling memory chips, which are VERY susceptible to damage from static electricity! For the same reason, try to wear cotton clothes for this job — synthetics and wool generate static charges easily.)

2) Assuming that you have already removed your 8K module from the computer and partially opened it as described above, finish opening it by gently prying the two halves of the case apart, starting on either side of the edge connector. The case should hinge open, allowing you to slide the actual PC Board out. Put the case aside.

3) Hold the PC Board (PCB) so that the connector is toward the bottom and the chip side is facing you. Toward the top is a row of eight ICs in sockets. These are the 8K RAM chips which you will be replacing with your 16K chips. Using a small, flat-bladed screwdriver or knife, insert the blade between the 8K chip farthest left and its socket at the top or bottom end. Now pry very gently, until one end of the IC starts to lift slightly from the socket. When this happens, place the blade at the other end of the chip and pry again. Repeat as necessary until you have rocked the IC out of its socket. This technique is tedious, but it ensures that none of the pins will bend, in case you need to reuse the chip. **ONLY REMOVE ONE IC AT THIS TIME!**

4) Place the IC you have just removed into the back side of the conductive foam your 16K chips were supplied in. Remove one of the 16K chips from the foam and examine it. Check that all the pins are straight — if any are bent, gently straighten with needle-nose pliers. Note that there is a slight indentation in one end of the chip: This identifies pin 1 and tells us which way to orient the

IC when inserting it. Hold the chip so that it is aligned the same as the remaining 8K chips, and gently insert it into the empty socket — be VERY careful not to bend any pins. If you notice that a pin is starting to bend or is not going into its hole, remove the IC, straighten the affected pin(s) with pliers, and try again. Press the IC all the way into the socket.

5) Using the techniques in steps 4 and 5, replace each of the remaining 8K chips, one at a time, with a 16K chip. When you have finished, check each of the installed chips carefully. Look for a chip in backwards or a bent pin not entering its hole correctly.

6) Now test the new memory by inserting the PC Board back in your computer, (no case necessary for now), with the chip side facing toward the front of the computer. Make sure the connector is seated securely. The board should be in the first slot (next to the 10K ROM cartridge), and any other 8K or 16K memory boards should be removed temporarily. Close the cover and cartridge door, or the interlock switch will not allow you to power up the system. Turn on your monitor and when it warms up, turn on your Atari. Type PRINT FRE(0), then press return. The computer should respond: 5134. This is because, although we have installed 16K, we still have not told the computer that this is no longer an 8K board. If the machine does not let you type, or does not respond, you probably have a bad 16K chip. Shut off the computer, open the cover, and check that you have installed the board properly in the first slot with the chips facing toward you. If you have not, then repeat step 6, otherwise, remove the board, put your 8K chips back in, reassemble your module and computer, and have the 16K chips tested — you will not be able to complete the conversion now.

7) Assuming that your 16K chips passed the test, it is time to reprogram the memory module as a 16K module. Shut down your computer and remove the board. Hold it with the connector down and the chip facing you. Near the

center of the board are six jumper positions, labelled A, B, C, D, E, and F. There are resistors at positions "B" and "D". Using your soldering iron, and working from the back side of the board, remove the resistors at "B" and "D".

Fig. 1 - Jumper Resistors

8) Now, using your desoldering wick or bulb and your soldering iron, remove the solder and any clipped leads from jumper holes "F" and "C" — a total of four PC Board holes.

9) Insert one of the resistors removed in step 7 into jumper holes "C" and solder in place.

10) Turn the PCB component-side facing you. Refer to Figure 2 and, with a sharp knife, carefully cut the indicated jumper traces on the PCB. To cut a trace, make two parallel incisions approximately 1/32 inch apart, then remove the foil between them with the tip of the blade:

The traces you should cut are labelled in Figure 2 as A, B, C, and D.

11) Clear away any metal particles left on the board from cutting the traces and desoldering. This is VERY important to avoid a short circuit from a small metal filing which could prevent the board from working.

12) Take a piece of fine, uninsulated wire (resistor leads work well), and hold it so that it touches the two PC traces shown as "H" in Figure 3. Solder it to one of the traces using a small amount of solder, then to the other trace, to create a jumper. This, and all subsequent soldering, is done on the back (non-chip) side of the board. Snip the excess wire off on both sides of the jumper.

13) Now place jumpers at the locations marked "E", "F", and "G" in Figure 3, using the technique of step 12.

14) Take a 2½ inch piece of fine, plastic-covered insulated wire, and remove about 1/10 inch of insulation from each end. Tin the ends by heating them with the soldering iron, then applying a small amount of solder. Solder one end of the wire to the trace

marked "J" on Figure 3. This is the seventh edge-connector pin from the right, and is not presently connected to anything. Solder the other end of the wire to the trace marked "K" on Figure 3. This is the back side of jumper position "F" referred to in step 8. Of the two "F" jumper holes, you want to solder to the one closest to the letter "F" printed on the board.

15) Check over your work. Look for solder bridging the trace cuts you made, and for metal filings or pieces of wire clinging to either side of the PCB.

16) Replace the printed circuit board in its plastic case, being careful that the chips face toward the metal plate. Screw the case shut, and label the top with a marker and tape, as a 16K module — don't overlook this step!

17) Insert the module into the computer, and test as in step 6. You should get a reply of between 15000 and 16000.

18) If you have additional memory modules, insert them in the computer. 16K modules should go toward the front, and any 8K modules immediately behind them. Replace the cover on your new, smarter Atari!

# THE MONEY WHIRLPOOL

by Judy Neyhart

All hobby and sport enthusiasts have the bumpers of their cars full of cute little slogans. "A fisherman is a jerk at one end of the line waiting for a jerk at the other". "A boat is a hole in the water into which one pours money". Computers as a hobby are too new to have these witticisms in abundance, but I maintain that a lot of these can apply differently to the computer addict.

For instance, the computer user may be a jerk at one side of the keyboard, but the "brains" inside the keyboard definitely do not represent a jerk. The thought processes of this electronic wonder — mine is an Apple known affectionately as Mac (short for Macintosh) — boggle my poor "little" mind! As for the "hole in the water into which one pours money," well, this can apply to computers, too, but as a one-time female pooh-pooher of my Apple (and there are a lot like me out there), I'm going to show you that this money poured in is definitely not wasted.

When our Apple arrived, all padded with styrofoam and neatly packed in boxes, I was not impressed. The few programs that came with it (that was in the good old days when programs came for free) were so hard to load via our cassette recorder that I barely gave it a second try. The loud, high-pitched screeching that emanated from the recorder in order to test

the load level was abrasive and not at all pleasant. Most of the time the word ERR appeared on the screen, meaning that the process had to be done all over again. The waiting period to find out if the load was successful was somewhat akin to the expectant father in the waiting room of the hospital — "What will it be?" When my husband said, "We have to get a disk drive," I thought of the hole in the water sucking in my money. After just one day with the disk drive, however, I knew the money was well spent. The speed with which the programs loaded would alone have been worth the expense, but we also got reliability. Every single load worked! No more screech, no more ERR! Worth every penny....

The next money-hungry plea came for more memory. "We need 48K". The only K I knew was a breakfast cereal. Those little chips mysteriously plugged away into Mac's guts allowed us to load many marvelous long and detailed programs: adventures on mythical islands, chess as the professionals play it, and long record-keeping lists. Again, not wasted money...

As the days wore on, and my friend, Mac, became more indispensable, another request came: "We have to have a printer". Oh no, the swirling money-hungry whirlpool appeared in my mind again. "What for?", I said. You see, my computer IQ was 0 and every capability had to be spoon-fed. The printer arrived,

too, and once more its uses far outweighed its cost. The obsolescence of my typewriter alone makes it worth the money! Every letter I write can be entered via keyboard, edited as often as necessary, and then printed in several print types and as many times as I want. You should see how easy it is to write complaints to members of Congress — one letter, ten copies — each looking like an original. They say the printed word has punch — well, then I'm responsible for a lot of knockouts! His answer to my "What for?" question had been "I can print out program listings". Would you like to know how many times I've used it to do that? I guess you know the answer, but boy can I think up other ways to use it. Get-well cards, address lists, personal letters, business letters, club minutes, and book reports are just a few. The address label is a marvelous invention that to me is equal in value to the invention of the wheel. That little strip of gummed labels has helped us with our tennis club (I handle all mailings) and simplified my Christmas card chores. When I was little, I used to play secretary and now Mac makes it easy!

When I think of you new users out there struggling with your cassette recorders and without your printers and 48K storage, I want to shout "Buy!" You don't know it, but I'm part Scot — even to the point of washing and reusing drinking straws! That's why coming from me, this money spree is so out of character. However, your 16K Apple with cassette is like driving your car with the brakes on. You don't know how much you COULD do!

OK, you say, what's next? I could get into the other whirlpool costs that have been valuable investments like a modem and Source membership, but I'm in the process of lobbying for a music system and I don't want to press my luck.

We have a sign posted prominently on the wall above my beloved Apple, Mac. It says, "The only difference between men and boys is in the price of their toys". That goes for girls, too!

# TERMS AND CONDITIONS

## DOMESTIC:

TSE/HARDSIDE accepts VISA and MASTERCARD, certified checks and money orders. Personal checks are accepted (takes 3 weeks to clear). TSE/HARDSIDE pays all shipping charges (within the 48 states) on all PREPAID orders OVER \$100.00. On all PREPAID orders UNDER \$100 a handling charge of \$2.50 must be added.

## ALASKA/HAWAII:

All orders from Alaska or Hawaii will be charged actual shipping charges. Orders under \$100.00 are subject to a \$2.50 handling charge in addition to actual shipping charges.

## C.O.D.:

C.O.D. orders are accepted for U.S. shipment only (orders over \$250.00 require a 25% deposit). There is a \$5.00 handling charge in addition to normal shipping charges.

## PURCHASE ORDERS:

Purchase orders are accepted only from U.S. schools and universities. The minimum purchase is \$100.00. Our terms are NET: 10 days. There is a \$10.00 handling charge plus actual shipping charges.

## CANADA/MEXICO:

Canadian and Mexican orders are accepted. However, we cannot ship C.O.D. to Canada or Mexico. The preferable method of payment is by bank credit card (VISA or MASTERCARD). NO PERSONAL OR COMPANY CHECKS. We will accept a bank check if it has been preprinted for payment in U.S. DOLLARS. The handling charge on all Canadian or Mexican orders is \$5.00 plus actual shipping charges.

## FOREIGN:

Payment must be by a BANK CHECK drawn on a U.S. BANK, payable in U.S. DOLLARS. We will also accept affiliated bank credit cards of VISA or MASTERCARD. All shipping and duty charges are the customer's responsibility. All overseas orders are subject to a \$10.00 handling charge plus actual shipping charges.

## DAMAGE:

Claims must be made within three working days of receipt of product. All requests must be made by telephone to the TSE/HARDSIDE Customer Service Department at 1-603-673-5144.

## RETURNS:

Any unauthorized returns will be refused upon delivery. If you wish to return an item for ANY reason, CALL FIRST! All returns must have a Return Authorization Number clearly marked on the outside of the package. Any hardware items to be restocked will be subject to a 10% restocking charge. Any software items to be restocked will be subject to a 20% restocking charge. Any item to be restocked must be in resaleable condition.

## SHIPPING:

Orders are normally processed within 24 hours of receipt, with shipping taking place within three to five working days. If the item is out-of-stock and delivery is not expected within ten working days we will send a postcard notifying the customer of the expected delay (in which case there would be a complete refund if the customer wishes to cancel the order).

## PRICES:

Prices and specifications are subject to change without notice. We are not responsible for typographical errors including prices.

## WARRANTY:

TSE/HARDSIDE Limits the liability of its warranty to the repair or replacement (our option) of a defective product, and can assume no responsibility for the way the products are used. Software products will be replaced on a direct exchange basis, if they are found to be defective within 10 days of receipt. Hardware products carry the warranty listed in the product description. No other warranty is to be assumed.

## SERVICE:

HARDSIDE maintains a service department for repair of items it covers by the HARDSIDE warranty. Our service department will also repair items not covered by the

HARDSIDE warranty (or out-of-warranty) on a fee basis. To contact the service department call 1-603-673-5144.

## TO ORDER:

You may place your order by calling our toll-free order line at 1-800-258-1790. In New Hampshire call 1-673-5144. The hours are 9 a.m. to 9 p.m. Monday through Friday and 12 noon to 4 p.m. on Saturday. Technical assistance and customer service calls are taken from 9 a.m. to 5 p.m. Monday through Friday on the 1-603-673-5144 number only. When placing an order have your credit card ready. You may also order by mail: TSE/HARDSIDE, 6 South Street, Milford, NH 03055.

## ORDER PICK-UP:

TSE/HARDSIDE maintains an order pick-up center in "Computer Haven" at 4 South Street in Milford, NH. It is best to first call "Computer Haven" at 1-603-673-5144, to confirm if the items you wish are in stock. "Computer Haven" hours are from 2:30 p.m. to 5:30 p.m. Monday through Friday and from 10 a.m. to 5 p.m. on Saturday. Please remember that since "Computer Haven" sells all TSE/HARDSIDE products at mail-order prices we cannot always offer all retail or demonstration services at this facility.

## READ CAREFULLY

If you live within the Continental U.S. and are prepaying your order: If your order is less than \$100.00, you must include \$2.50 for handling. If your order is more than \$100.00 and you are prepaying your order, we will pay all shipping and handling charges (Continental U.S. only).

## CATALOG:

For detailed descriptions of our software, hardware, and supplies send \$2.00 for the TSE Catalog and receive a certificate worth \$4.00 off any purchase.

# “Did you know you could get SoftSide’s programs already typed?”

With **SoftSide** Disk and Cassette subscriptions you can get each month’s TRS-80™, Apple, or Atari programs delivered on disk or cassette with every issue of your **SoftSide**. No more hours of typing. No hunting for typing mistakes. The programs for your computer are tested and ready to go the day you receive them.

To order, use the form below or call 1-800-258-1790 toll free. In N.H. call 673-5144. Be sure to specify TRS-80™, Apple, or Atari.

If you already receive **SoftSide** magazine, you will receive credit for the remainder of your subscription toward your new cassette or disk subscription.

## SoftSide™

- Magazine and Cassette \$39/6 months
- Magazine and Cassette \$75/year
- Magazine and Disk \$64/6 months
- Magazine and Disk \$125/year
