Presentation Graphics is set up to run on medium resolution monitors. If you wish to use the package on a high resolution screen you must follow the procedure below:

- 1 Using Gem desktop simply make a backup of the program disc (see page 107 of the graphics manual for further details).
- 2 Delete the file GRAPH.RSC from the backup disc then copy the monochrome version of this file from the utilities disc – GRAPHBW.RSC
- 3 When you now double click on GRAPH.PRG the program will load up the correct resource file.

Double sided disc owners will be able to fit all the files onto the one disc.

## Demo files

The demonstration files included with Presentation Graphics are also split between the two discs. Simply examine the DEMOS.GRA folders to search for the required demo file.
