Provides complete location data control and protection.  
Counts coins or tokens.  
Assures owner-only control for all operations.  
Provides complete security through coded password data entry.  
Records tampers by time.

# ATARI COIN EXECUTIVE™

ACE, the Atari Coin Executive is the complete coin accounting system for today's complex operator collection control requirements. Atari provides the entire system to make detailed information quickly available, eliminate time consuming hand entry or expensive computer time-sharing. The ACE Work Station is shown with the ATARI 800 computer and software program disks - all part of the integrated ACE system.

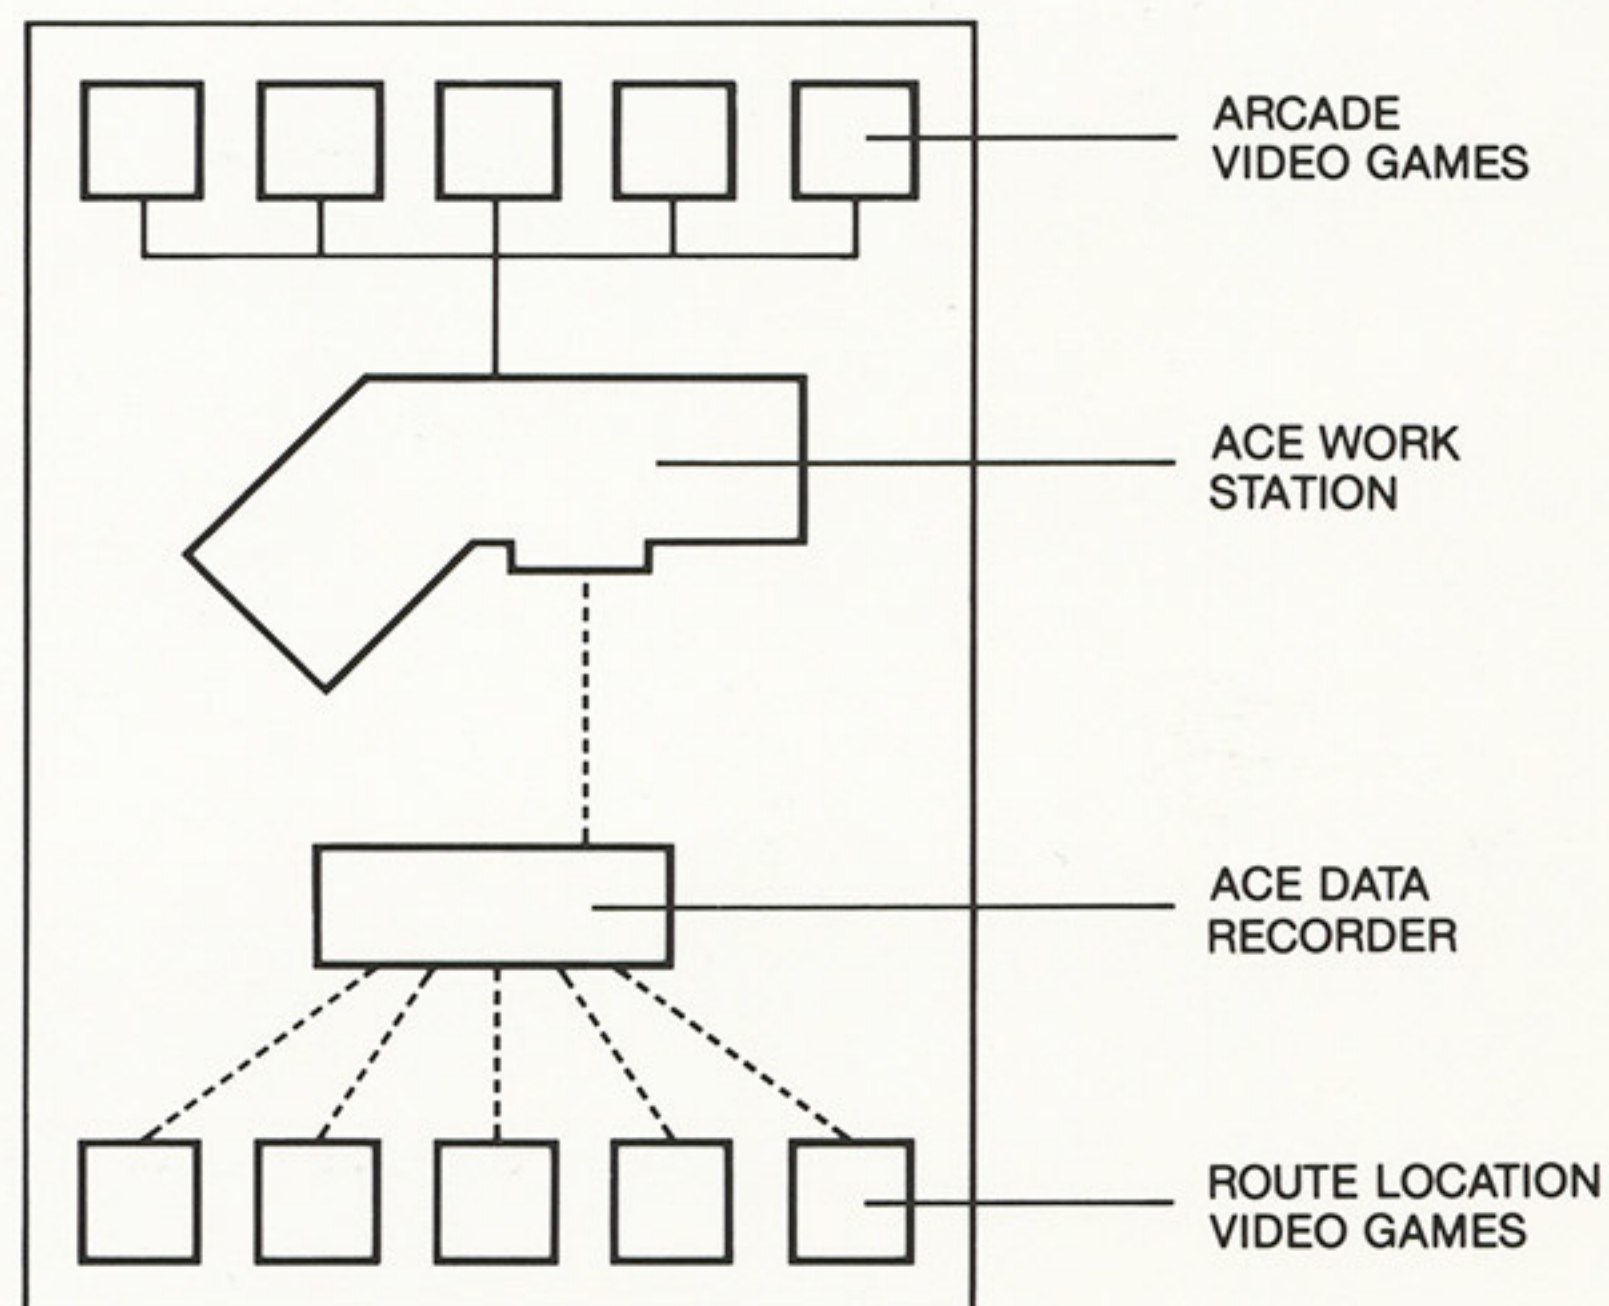

ACE DATA RECORDER

ACE COIN MONITOR

## The ACE Data Recorder and Coin Monitor

The ACE Coin Monitor is utilized by every coin-operated game installed in each arcade or route location. Each ACE system includes at least one or more Data Recorders. The Data Recorder makes route collections push-button easy and computer-accurate. It can also provide a printed record that can be left at each location.

## ACE works with routes, arcades or both.

Arcade data is reported to the owner via telephone type wiring. Route collection information is provided via the ACE Data Recorder. Both techniques generate secure financial reports quickly and accurately for optimum analysis and statistical control.

The Atari Coin Executive has been created to help the coin-operated games businessman realize maximum profit potential. By providing complete accounting information, operators can now track earnings of each game in each location as well as overall location performance.

Atari. The game experts that helped operators grow now helps the operators account for their success.
