NOVEMBER 1979 \$2.00

**CONQUER
MOUNT
EVEREST!**

The Best Has Gotten Better!

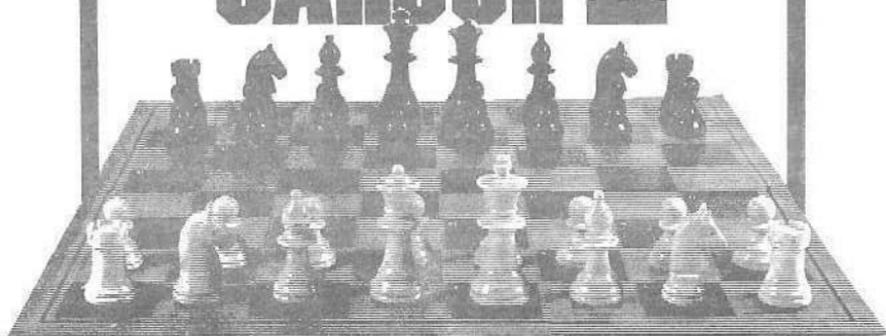

Sargon, the program that came in first in the Creative Computing Microcomputer Chess Tournament, has become Sargon II - \$29.95

- A vastly improved game
- Faster response time
- New level 0 for beginners
- Easier to pre-set board
- Hint mode - What does the computer suggest

Sargon II is the program that took on the maxi-computers in the West Coast tournament, and finished in the money! More thinking power than you ever expected in a TRS-80.

Now in stock for immediate delivery!

COVER STORY . . .

About the Author: Byron Myhre is a Medical Doctor with a Ph.D. as well. He is Professor of Pathology at the UCLA School of Medicine and Head of Immunopathology. An avid climber, he has scaled somewhere around 140 peaks himself, and is a member of the Sierra Club. He has been working with the TRS-80 for about two years.

Lifeboat Associates, specialists in microcomputer disk software, is proud to offer the first professional disk-based language and utility package for the Radio Shack TRS-80 computer. Written by Microsoft, creators of Level II BASIC, the package runs on a TRS-80 system with 32K RAM, one or more drives and TRSDOS. The software is supplied on diskettes and consists of:

FORTTRAN a true relocatable machine code compiler for ANSI FORTRAN X3.9 (except COMPLEX variables).

MACRO ASSEMBLER a disk-based macro assembler utilizing Zilog mnemonics and producing relocatable code.

LINKING LOADER a link-edit and load FORTRAN and assembler modules for execution.

SUBROUTINE LIBRARY a complete library of subroutines existing as relocatable linkable modules for Fortran or assembler programs - e.g., double precision square root, natural log, transcendental, etc.

DISK TEXT EDITOR to create and modify Fortran and assembler programs as disk files; also can be used as a general purpose text editor for correspondence and other documents.

TRS-80* FORTRAN SOFTWARE PACKAGES

This high-powered professional software package with full documentation is available at the

DISCOUNT PRICE OF **\$150.**
PER COMPUTER SYSTEM

The Macro Assembler, Loader, Editor, and Cross Reference Utilities alone **\$80.**

The Fortran Compiler, Loader, Editor, and extensive library of scientific functions alone **\$80.**

SoftSide™

YOUR BASIC SOFTWARE MAGAZINE

SoftSide Magazine is continually seeking original articles and software for publication. Imagination and variety in concept and content are the rules at **SoftSide** — not the exceptions. Articles are purchased on a per-page basis, based on content and applicability. Our policies with respect to software purchase are highly individualized, and offer the programmer several options, including one-time publication rights, outright purchase, and royalties on sale of pre-recorded cassettes. For more information, please write: **SoftSide**, PO Box 68, Milford, NH 03055.

For uniformity, we have adopted the Radio Shack TRS-80 Level II BASIC as the BASIC dialect used within the pages of this magazine. It was chosen because it stands to become the most commonly used dialect among microcomputer users and because it shares a common heritage with the many microcomputer languages produced by Microsoft.

SoftSide is published monthly by SoftSide Publications, 6 South St., Milford, NH 03055. Telephone: 603-673-5144. Subscription rates: USA bulk rate — \$18 per year. USA first class, APO, FPO, Canada, Mexico, overseas surface mail — \$25 per year. Overseas airmail — \$30 per year. All remittances must be in U.S. funds. OUTGOING MAIL

Banned in Boston

Back in the Victorian era, a shrewd promoter took a rather modest nude painting and displayed it in a shop window, then induced a small boy to complain to the police. The shopowner was arrested, the case got national publicity, and thousands of prints of the painting, "September Morn", were sold nationwide. Ever since that time, it has become a status symbol for a publisher to be "banned in Boston". The Software Exchange achieved that dubious distinction at the Boston Computer Show.

As the staff of SoftSide Publications and Ramworks (Ramworks is a wholesale division of The Software Exchange) were setting up our booth at the show, we were served with an injunction from a local Radio Shack dealer forbidding us from using the

name TRS-80 Software Exchange during the show. Ironically, we had already changed our name to The Software Exchange because we have started to distribute software for the Exidy Sorcerer and the Apple II, but most of our labels had the old name, and we had to relabel all our software at the show with RAMWARE™ labels. Despite the inconvenience, it was nice to be noticed instead of ignored by The Shack.

Notice on a national basis is inevitable now that our company has passed the million dollar mark in annual sales to become the country's largest independent supplier of personal computer software. We are working furiously to upgrade our product line and procedures appropriately to our success.

We care more about your satisfaction. What other software supplier carries 140 items in inventory? Even with the massive scale, most of our orders are filled within 48 hours, and quantity orders are usually on their way to dealers within ten days. What other suppliers ship as fast? And, most important of all, what other suppliers make programming staff available to answer questions? Please note: our programming staff is only available on this schedule, as they have other responsibilities:

Order related questions (Will it do this?) and problems with programs selling for \$50 and more:

George Blank is usually available Monday thru Friday 9AM to 10AM

Roger Robitaille is usually available Monday thru Friday 5 PM to 6 PM

Any TRS-80 problem:

The whole programming staff is available on Tuesday nights from 7PM to 10PM. (All times are Eastern Time Zone.)

Programmer of the Month

Our TRS-80 programmer of the month for November is thirteen-year-old Roy Niederhoffer of Great Neck, NY. Roy is in the ninth grade at Great Neck Junior High School and plays the violin, cello, and piano, but his favorite keyboard is the TRS-80. At that keyboard he is a maestro.

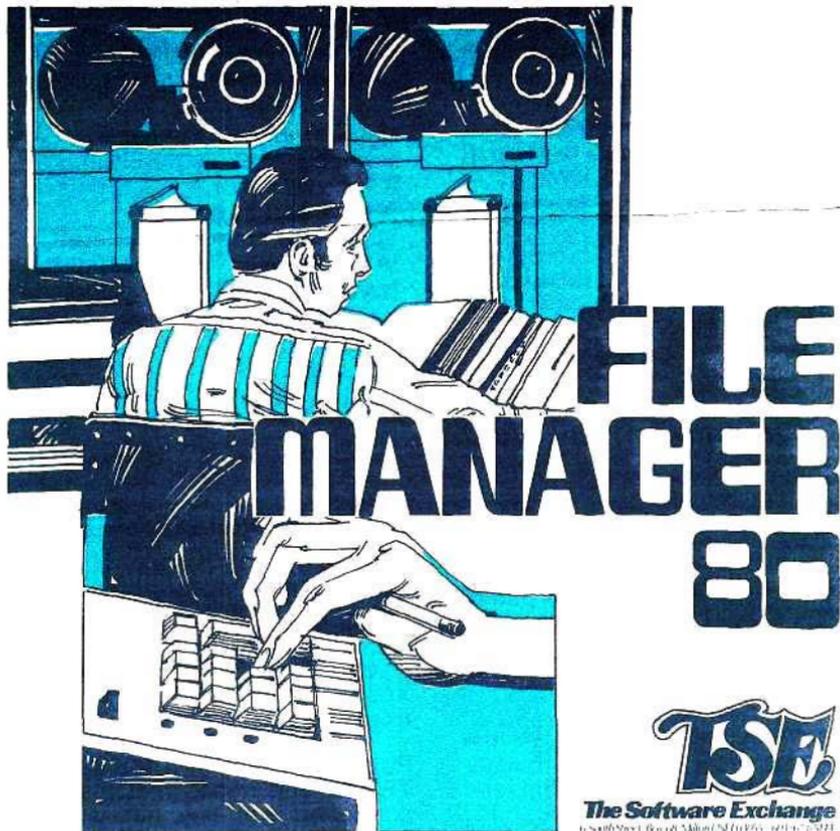

Roy became interested in the TRS-80 when his brother bought one for his investment firm, and would stay up to 3 a.m. learning to program. With the help of his sister, who is studying psychology, Roy did an excellent version of ELIZA which had our staff in stitches, but we were reluctant to publish a program that was not fully original.

Another one of Roy's programs did score with our reviewers; Alien Invasion, with cute animated graphics, nifty sound, and arcade style action as you shoot down the alien invaders who are flying over earth and dropping bombs on your guns. You will be able to buy it soon from TSE.

Roy now has his own 16K Level II TRS-80, and hopes that his programming will buy him a disk drive. He wants to start his own software business, and we think he'll do well.

GWB

NEW! utility package from NEPENTHE PROGRAMS

Programming utility for professional programming.

File Manager 80 will organize tape and disk file routines, print a dictionary of items specified by you, edit items already specified and create record layouts using the items you have described. It will even create the code for your input/output routines, including format, sub-record, get, and put routines, and store them as temporary files to merge into your programs. It will maintain a dictionary of the subroutines you create and the variables used.

Minimum configuration is one disk and 32K of memory, but two disks are strongly recommended. Comes on disk with manual for \$14.95.

Editor's Recommendation: This is one of the most valuable programs I own. I have used it for tasks as varied as debugging, disassembling Level II, and storing my copy of Sargon II on disk for fast loading. The only other program I have that compares in value is NEWDOS. — **George Blank**

This is what you can do:

COMMAND

- | | |
|-------------------------------|--|
| A - ASCII DUMP: | Display ASCII equivalent of memory block |
| B - BINARY ARITHMETIC: | Add/subtract in hex and decimal |
| C - CHECK TAPE: | Check cassette tapes for proper checksum |
| D - HEX DUMP: | Display Hex equivalent of memory block |
| E - EDIT: | Enter, examine, or modify memory in hex code |
| F - FIND 1 BYTE: | Find and display single-byte hex codes |
| G - GOTO: | Go to and execute program at specified address |
| H - HUNT 2 BYTES: | Find and display two-byte addresses |
| I - INITIALIZE/INPUT: | Initialize or input data from port |
| K - KEYBOARD ECHO: | Type directly to screen or terminal |
| L - LOAD AND GO: | Load a cassette tape and execute program |
| M - MOVE: | Move any block of memory to specified location |
| O - OUTPUT: | Output hex value to specified output port |
| Q - CHECKSUM: | Compute checksum of specified memory block |
| R - READ TAPE: | Read cassette tape (header or standard) |
| S - SYMBOLIC DUMP: | Display memory in ZILOG Z-80 mnemonics |
| T - TEST MEMORY: | Test memory block and display errors |
| U - USER: | Allows user to write and execute new commands |
| V - VERIFY MEMORY: | Compare any two blocks of memory |
| W - WRITE TAPE: | Write any memory block to cassette tape |
| X - EXCHANGE: | Interchange any two blocks of memory |
| Z - ZERO MEMORY: | Write zero or any hex code into memory |
| @ - BREAKPOINT: | Inserts breakpoint AT specified address |
| P - PUNCH: | Writes cassette tape in LEVEL-II SYSTEM format |
| R - READ: | Read SYSTEM tape, display name, start address |
| L - LOAD: | Loads specified disk sectors into memory block |
| \$ - SAVE: | Saves memory block into specified disk sectors |
| Y - TRS232: | Set print parameters (baud, etc.) for TRS232 |
| -> - PRINT: | Directs output to printer as well as screen |

The High Cost Of Keeping Warm

Energy Cost by George Blank

Few things make people hot under the collar like the cost of staying warm these days. The cost of every kind of heating fuel except sunshine seems to be rising rapidly. As the changes come day by day, how do you know if you are getting a good deal? Is it time to put a wood burning stove in the kitchen for heat? If you are planning to buy a house, what kind of heat should you look for? Should you convert your present heater to a different fuel?

This program will help you answer these questions. The program asks you to select one of the six fuels listed and enter the current or proposed price. Then it calculates the price at which each of the other five fuels would give equal value. If another fuel is available at a price cheaper than the price on the screen, that fuel is a better value.

The program calculates the price equivalent by converting the different measurements into equiv-

alent British Thermal Units and then adjusting the figure received to allow for the differing efficiencies of various furnaces. The figures used to arrive at the comparison are easy to find in the data statements, if you wish to change them. Actually, only measurement equivalents in gallons of oil are used in the calculators, but the BTU's are listed if you want to make changes.

Some of the changes you might wish to make would be to allow for different qualities of fuel or different efficiencies of furnaces. For example, while the wood furnace is rated at 50% efficiency, a fireplace has a much lower efficiency. If you have an electric heat pump instead of resistance heating, that is more effective. While the figure varies from place to place, a figure of 160% efficiency for a heat pump in the midwest is appropriate.

You might want the ratings of various fuels. For example, dif-

ferent grades of coal range in value from 12,000 to 15,000 BTU's per pound, and different woods have an even wider range. The value for wood (one cord equals 150 gallons of oil) is appropriate for woods with a medium heat value like Elm or White Birch.

If you wish to change the BTU value of a fuel, place the equivalent number of gallons of heating oil in line 230. To change the furnace efficiency value, place the percent efficiency rating in line 240. Changes to line 220 will not

affect the calculations. Those figures are provided for reference only. All DATA is given in the order listed in line 200.

This program obviously does not tell the whole story about various fuels. Many people would be willing to pay a significant amount not to have to chop wood, empty ashes, and stoke a furnace, while other people could save a hundred dollars a month by chopping wood instead of maintaining a tennis club membership. You will have to decide such values for yourself!

A COLUMN OF YOUR LETTERS

Dear Editor:

You have a section entitled "Outgoing Mail" --well -- why not have a section entitled "Incoming Mail" -- many of us have some real good stuff and no one to tell it to. Give it some thought - OK?

Larry C. Martin, Tucson, AZ

Editors Reply;

I DON'T BELIEVE IN THOUGHT,
LARRY, I BELIEVE IN ACTION!
GWB

Gentlemen:

Enjoyed the July issue of SoftSide immensely! Congratulations! We owners of TRS equipment beg for more software - why Radio Shack is reluctant to emphasize this area I do not comprehend.

I am interested in reviewing your TSE Catalog on TRS-80 software and accessories. Please forward to me. I feel certain that a subscription of SoftSide is imminent. Excellent material.

Kenneth I. Swanstrom
Eric Computer Systems
Green Bay, WI

Gentlemen;

Thank you for your quick response!

A tape I ordered from you came in one week - the tape I ordered on the same day from Creative Computing, which charged for shipping, has not yet arrived in 3½ weeks. Yours is thus the better service by a long-shot. Keep up the good work!

Robert E. Sanders
San Diego, CA

SoftSide;

I began taking your magazine in the first issue. Of all the magazines I take SoftSide has the most to offer my family. My 4 year old daughter waits for each issue and likes to look thru it. She asks me what games there are for her or the two of us to play. I just wanted to give you some words of encouragement.

Thank you.

J. G. Souter
Round Rock, TX

Dear Folks;

Can it be! Is SoftSide celebrating a birthday? It's hard to believe I saw your first issue little more than a year ago. SoftSide has become so much a part of my programming and my teaching that it seems I've been reading it for years. Congratulations on a great publication.

I guess it must be time to renew my subscription, so here's my check so I won't miss anything.

One final note. The documentation with "Treasure Dungeon 2" in the September, 1979 issue is unbelievable. Keep up the great work!

Jon C. Sherman
Mt. Pleasant, Iowa

ST80D

Lance Micklus'
ST80-the Smart
Terminal Program-
just got SMARTER!!

ST80D contains extensions for disk drive systems to exchange files with a timesharing computer or another TRS-80.

USING ST80D, your TRS-80 can do all this and more:

- Gather and pre-format data, store it on disk, then transmit it to a timesharing computer for processing.
- Processed data from the timesharing computer can then be sent back to the TRS-80.
- One TRS-80 can generate a data base and share it with another TRS-80 thousands of miles away by telephone.
- Users may customize their terminal program by redefining the translation tables. Conversion from one set of tables to another takes only seconds.
- Auto logon feature sends your account name, number and password upon request.
- ST80D can transmit any type of TRS-80 ASCII file, including BASIC programs stored in ASCII format, and most BASIC data files. Binary files can also be transmitted from one TRS-80 to another, allowing even machine language programs to be sent over the phone.

ST80D is a practical, full-feature terminal program that has been used on a variety of timesharing systems. These include IBM 370, Honeywell Sigma/6, Harris/7, DECSYSTEM 20, Dartmouth Timesharing, CDC Cyber and HP 2000.

If you're looking for a professional quality product, **not an amateur program**, then order ST80D today!

The logo for The Software Exchange (TSE) features the letters 'TSE' in a large, bold, stylized font with a 3D effect and a drop shadow.

TIRED OF DISK ERRORS?

STOP BLAMING YOUR DRIVES — FIX YOUR DOS!

NEWDOS, by Apparat, is the third generation disk operating system for your TRS-80. NEWDOS corrects over 70 errors and omissions in TRSDOS 2.1 and disk BASIC, yet the two are completely compatible! Programs and files saved under one can be used with the other interchangeably. Going from TRSDOS 2.1 to NEWDOS is like going from Level I to Level II: more power, more convenience, greater speed.

NEWDOS

- Use all DOS commands (incl. directory) in BASIC
- Automatically load and run a BASIC program on power-up
- Produce variable cross-reference tables
- Open 'E' to add to sequential files
- Append files
- Use your line printer as a screen printer
- Renumber BASIC programs
- End keyboard bounce

NEWDOS+

- Editor/Assembler for disk
- Disassembler (Z80 machine code)
- LM Offset—allows transfer of any system tape to a disk file (automatically relocated)
- BASIC1—Level one BASIC saved on disk
- LV1DSKSL - not a typo, this saves and loads BASIC1 programs to disk
- DIRCHECK—tests and lists disk directory
- SUPERZAP—display/print/modify any location in memory or on disk

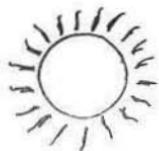

And, best of all, say goodbye to system crashes, lost data and wasted time caused by your old, bug-ridden system software.

Apparat's NEWDOS is fully documented and available for only \$49.95. NEWDOS+, Just \$99.95

NOTE: Use of this software may require documentation available only with the purchase of Radio Shack TRSDOS 2.1 and/or the Radio Shack Editor/Assembler.

ISOLATE

by James Garon

The object of this game is to isolate your opponent (the computer) so that there is nowhere for it to move on its turn; you do this by destroying squares until you box it in. At the same time you have to keep moving about to sidestep being boxed in yourself.

When you have gotten proficient and cocky at level one, try going to levels two and three - where the computer destroys two or three squares at a time, while you get to destroy only one!

The action is accompanied by lively sound effects to make winning all the more fun.

*** ISOLATE ***

ISOLATE

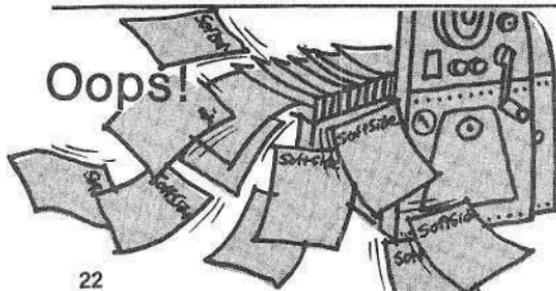

If you tried to enter ISOLATE directly from the line listing, you probably received a shock when you came to line 3000. The line seems to be either super graphics or super garbage. Actually, it is James Garon's machine language sound routine.

It doesn't really matter what you put in the line as the contents of M\$, for the routine at 3010 to 3050 modifies the string to include the subroutine. Rather than try to duplicate the garbage, we suggest that you use this line:
3000 M\$^s"/"////////////////////"

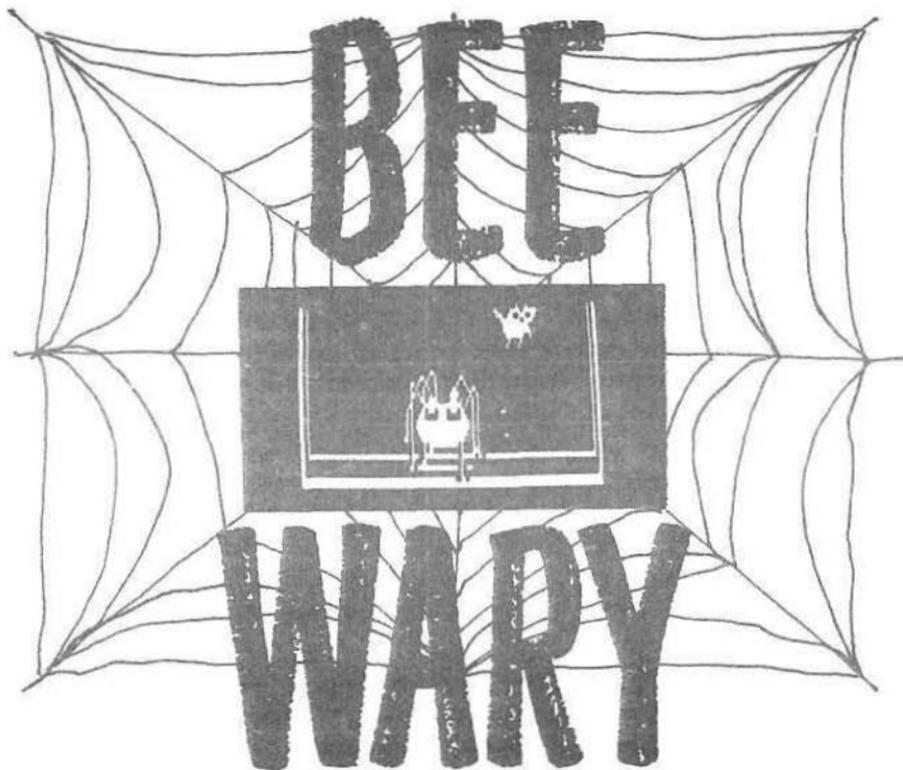

(Use 27 slashes.)

The routine works by using VAPTR in line 3010 to find M\$, then READING the DATA in line 3050 and POKEing it into the reserved string space. This method allows you to use a machine language subroutine in Level II BASIC and DISK BASIC without worrying about where in memory to put it. (A routine at the top of memory in a 16K Level II program would be located in the middle of the BASIC code in a 32K Disk System.)

Time spent studying this routine and learning the commands used by studying the Level II BASIC Manual would be very productive in programming technique.

We slipped . . . and sent subscription notices twice to those whose subscriptions expired in November. Please forgive us for the paper avalanche!

(More Magic from Leo Christopherson)

Round One:

**The Bee tried to sting the Spider
And wound up insider.**

Round two:

**Float like a butterfly, sting like a Bee
And the Spider dances to eternity.**

This fast paced real time action game is a contest between a Bee operated by the player and a Spider operated by the computer. The Bee tries to sting the Spider in a vulnerable spot while the Spider tries to jump up and swallow the Bee. Fast paced animation, sound, and real time action. Machine language subroutines, but loads as Level II for easy operation. \$14.95

FASTGAMMON

Backgammon is a two-person game.

In FASTGAMMON the computer is one player (its men are O's) and you are the other (your men are X's).

Whether you are a beginner or an experienced backgammon player, FASTGAMMON can help you improve your game. First of all, you now have an opponent that is always ready and willing to play. There is no substitute for experience — the more games you play the more you learn about backgammon. But there is another unique method by which FASTGAMMON can help you improve your game.

By selecting "2" when the starting message is displayed, the same sequence of rolls that occurred in the game just played (the last game for which you selected "1") will occur again.

HOW GOOD IS FASTGAMMON?

We make no claims that FASTGAMMON plays at an expert level. In fact, good players will notice obvious mistakes that the computer makes from time to time. The game of backgammon has many subtleties, and the algorithm programmed into version 1 of FASTGAMMON is a fairly simple one. There is an advantage that the computer has, however, over human players — the computer never forgets what it "knows". Due to oversights, distractions, or haste, human players often forget what they know. This fact is the edge that makes FASTGAMMON competitive against good players. Level II 16K \$19.95

Duplicates Any
TRS-80* Program Tape

"Data Dubber"

Yes, even those in machine language! Feed your cassette into the "Data Dubber" and get out exact replicas of the TRS-80 CSAVE data pulses. Obtain perfect CLOAD'S even from tapes with hum, distortion, or minor dropouts . . . and without constantly adjusting the volume. Connect a second cassette to the "Data Dubber" and make perfect reproductions just as if the data had come from the TRS-80.

The "Dubber" works with Level I or II and costs only \$49.95 (plus \$2.00 postage & handling). Pays for itself in time saved and reduced tape cost. Order the "Data Dubber" today! If you are not completely satisfied with its performance simply return it for full refund.

6 South St., Milford, NH 03055 (603) 673-5144

**Can you ignore the challenge of . . .
EVEREST?** by Byron A. Myhre

Diamond '79

Everest, the highest mountain in the world, has challenged mankind for centuries to climb it. Named after Sir George Everest, a Surveyor General of India, it is located on the border between Nepal and Tibet.

Climbing expeditions have been started from both sides of the mountain, but the successful campaigns have almost all started in Nepal. The climbing of this mountain uses expeditionary siege techniques. Food and supplies are slowly advanced up the side of the mountain whenever the weather is fitting. Camps are established on the side of the mountain at intervals which have been found to be about one day's climb for the average climber carrying a load.

The climbers normally fly to Katmandu, Nepal. From here there is about a 185 mile trek through the lowlands in which all of the supplies are carried to the higher camps. This trek is through forests, swamps and jungles. On arriving at the higher areas (about 14,000 feet), local natives called Sherpas are hired to carry the supplies up the side of the mountain and to climb with the team. The climbing team is usually picked so that it includes individuals of various occupations,

especially physicians, engineers, photographers, geologists and weather observers. However, all members of the team must have the ability and love to climb. Everest was first successfully climbed on May 29, 1958 by Edmund P. Hillary and Tensing Bhutia. It was first climbed by Americans on May 1, 1963.

This game is patterned somewhat after the American climb. The expedition begins in Katmandu, Nepal where supplies are purchased and packed. Food costs 50 rupees a pound, oxygen tanks cost 500 rupees each. Sherpas must be hired - they work at 50 rupees a day while on the mountain only. There are roughly ten rupees to the dollar.

The display of Everest shows the summit of Everest on the left (north) and Lhotse on the south (right). Nuptse, the third peak, would be west or toward the operator, but is not shown on the display. Seven camps are established. They are as follows:

Camp	Elevation	Location
Base Camp	17,800 feet	Base of Khumbu glacier
Camp 1	20,200 feet	In the Khumbu ice fall
Camp 2	21,350 feet	Bottom of Western CWM
Camp 3	22,900 feet	Middle of Western CWM
Camp 4	24,900 feet	Near base of Nuptse and Geneva spur
Camp 5	26,200 feet	On edge of South Col.
Camp 6	27,450 feet	On side of Everest summit

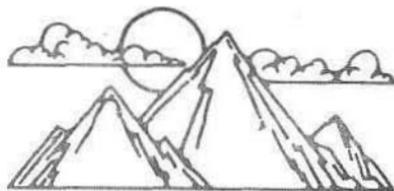

Climbing begins at Camp 1. Each climber can carry a 40 pound load (20 pounds of gear and 20 pounds of food) up one camp. Each climber may instead carry four 10 pound tanks of oxygen up one camp. A third possibility is that a climber may go unloaded up one camp or down one or two. During the evening and the next morning each climber will eat two pounds of food per day and each Sherpa draws his pay. Water is obtained by melting snow and ice. This does not have to be carried. Oxygen is consumed only at Camp 6. Each climber uses one tank of oxygen each night. In order to make a successful summit attempt two climbers must be ready at Camp 5 the morning of the summit climb with two tanks of oxygen each and four pounds of food. One tank will be used to survive the night after the summit climb. Food is eaten in the same way. At least two climbers must make the summit - climbers never go alone.

The climb must be made within a 30 day period. There are only 30 days between the start of the

climb season and monsoon time. Weather is acceptable for climbing four out of five days. On an average of every fifth day there can be no climbing and everyone must remain in their tents. If bad weather occurs in Camp 6, oxygen must also be consumed to survive. In late afternoon about every ten days an avalanche will strike one camp and destroy it. If there are any personnel in this camp, they are killed. Being civilized people, we always observe a day of mourning when any of our climbers have died. Therefore, no climbing is done on that day. Climbers are always killed instead of Sherpas - this also is civilized.

It is possible to survive one night in any camp without food or in Camp 6 without oxygen. However, supplies must be replenished or the camp evacuated the next day. If not, one climber will starve or die through the lack of oxygen. Again, being civilized people, we observe a day of mourning.

Good luck, and ration your supplies carefully!

TIME TREK Joshua Lavinsky

"If I had to choose only one Star Trek program, it would certainly be TIME TREK." 80-US Comparative Review, July, 1979.

Your mission: Destroy from 8 to 80 Klingons (Skill level 1-10) before they destroy your 7 or 8 starbases.

Real Time! (in FAST machine language)

You can maneuver even when being fired on! Dodge enemy fire!

You have only seconds to respond when you get an SOS from a starbase! Yet in 5 seconds in this game you can move from one quadrant to another, maneuver into position for battle, and destroy the enemy, or if you are not careful, be destroyed yourself. If you wait longer, you will arrive just in time to see your starbase explode and the Klingons move off the edge of the screen.

16K SYSTEM Tape (will load in Level I or II TRS-80)

THE[®] MEAN CHECKERS MACHINE

by Lance Micklus

NEW!

Now supports
forced jumps! Previous
purchaser - If you want
forced jumps, you can trade
in your old version for a \$5
service fee.

TSE

THE SOFTWARE EXCHANGE
6 South Street Milford, NH 03055

Our resident wizard has done it again! Designed in FORTRAN, run as machine language, this program turns your TRS-80 into an unbelievably wicked checker player! Four levels of play; at the most difficult, the machine may take ten minutes per move, as it attempts to assess all possibilities. MEAN CHECKERS MACHINE is to checkers what SARGON is to chess. (Level 4 is an exercise in humility!)

Level II, 16K	\$19.95
Disk	\$24.95

ELECTRIC PENCIL!

Effortless typing is here!

The Electric Pencil by Michael Shraye is a true word-processing program for the TRS-80. Enter your manuscript, and let your computer do the work. Editing? Just position the cursor with the arrow keys . . . one-key commands let you change, delete, or insert. Fully adjustable margins, left/right justification, variable spacing, page headings, and much more! Save and recall your text with tape or diskfiles. **Typing** everything from letters to reports is fast and incredibly easy using The Electric Pencil.

Your Market
For New And Used
Microcomputer
Equipment

NEW! TRS-80* Computers 10% off!

Effective July 1, Radio Shack* dropped the price of TRS-80* equipment. On the same date, we received authorization to sell the complete TRS-80* line, at 10% below the new low Radio Shack* price. This all-new equipment, with Radio Shack* warranty and service, is now made even more affordable than ever!

If you're looking to save even more, consider HARDSIDE's used equipment department for prime condition, previously owned TRS-80* equipment.

Do you have something to sell? HARDSIDE will buy any used Radio Shack* TRS-80* equipment in good condition. Refer to our price list below.

So . . . if you're looking to buy or sell TRS-80* equipment, look to us first!

As an introduction to HARDSIDE we are offering two special packages:

- 1) TRS-80* expansion interface with our 16K RAM, single PERCOM disk drives with cable, and NEWDOS disk operating system. \$830. Save \$167.
- 2) TRS-80* Level II, with our 48K RAM, dual Percom disk drives with cable, Centronics 779 tractor printer with cable, and NEWDOS+ disk operating system. \$2999. Save \$1144.

These two offers are good for 30 days only, and expire November 30, 1979.

We will soon be opening a retail location for our New England Customers. Watch for details.

**6 South Street Milford, New Hampshire 03055

Low Cost Add-On Storage for Your TRS-80*. In the Size You Want.

Whether you need a single, 40-track TFD-100™ add-on or a three-drive add-on with 77-track TFD-200s™, you get more data storage for less money with Percom drives.

The reason you get more for less from Percom drives is simple. Peripherals are not a sideline at Percom. Selling disk systems and other peripherals is their main business — the reason you get more engineering, more reliability and more back up support for less money.

• Enclosures are finished in system-compatible "Tandy-silver" enamel.

- Choose either 40-track TFD-100™ drives or 77-track TFD-200™ drives.
- One-, two- and three-drive systems immediately available.
- Systems include Percom PATCH PAK #1™, on disk, at no extra charge.
- PATCH PAK #1™ de-glitches and upgrades TRSDOS* for 40- and 77-track operation.
- TFD-100™ drives store 205K bytes per mini-disk, over 102K bytes on each surface.
- Low prices. A single-drive TFD-100™ costs just \$399. Price includes PATCH PAK #1™ disk.

™TFD-100, TFD-200, and PATCH PAK are trademarks of PERCOM DATA COMPANY.

*TRS-80 and TRSDOS are trademarks of Tandy Corporation and Radio Shack which have no relationship to PERCOM DATA COMPANY.

Doodle Pad

by R. B. Nottingham

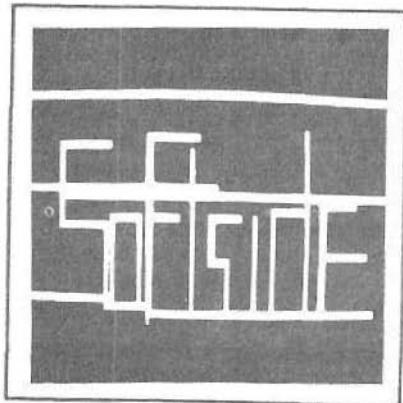

Doodle Pad evolved when I read that someone had discovered that memory location 14400 changed value from 0 to 8, 16, 32, and 64, when the appropriate keyboard arrow was depressed. I quickly entered a program to PEEK at this location and print the value. Sure enough, it did. Then I went a bit farther and used a FOR-NEXT loop to print the entire keyboard memory area. Then I found that many locations adopted the same value when a key was depressed and that 14784 for example, gave the same values, for the arrows but increased them by one when the shift key was depressed.

I decided to play a little more, thinking that the process might be useful for writing a game program so that the arrows, rather than arbitrary letters; could be used to control direction. At first I used four IF statements, to increment or decrement the location for a SET spot. With the odd values it was easy to use a RESET command so that I could erase as well as write.

However, I had no way of telling where the spot was except by setting and resetting a location, so a flasher was added which SET and then RESET a spot when the shift key was depressed. The flash proved to be too brief, so a delay loop was added between the commands. I had looked at this up to this point as simply a programming exercise which might have future value, but then I let some children try it.

They were fascinated! It held their interest for a surprisingly long time. Some of them drew quite elaborate pictures. Houses and trees seem to be the favorites.

The program is liberally sprinkled with remarks so that it should be highly intelligible. Have fun!

PROGRAMMING HINTS

Send in your Programming Hint! We give a \$10 TSE Market Basket Merchandise Certificate to the first person submitting each hint

CLEAR

It can be very important to place a CLEAR statement listing the amount of string space needed in every program. If CLEAR is not executed, or if CLEAR is executed without specifying a number as in CLEAR 500, then the computer clears the same amount of memory as the last previous CLEAR statement. To see the effect of this, try running some programs after executing the statement CLEAR when there is no CLEAR XXX in the program. If you have been getting OUT OF MEMORY errors, this may be the reason.

Cold Start

When running an important program, it may pay to turn the computer off and bring it up from a cold start. One user with subtle problems eventually traced the problems to a previous program that POKED changes into the BASIC scratchpad area (locations 12288 to 16870).

Thanks to George Lasseigne for this information.

Multiple USR Calls

Here is a hint for assembly language programmers. Level II says there is only one USR call permitted. The following heading in the machine program permits as many as memory allows. A call for USR(0) goes to program 0, a call for USR(1) goes to program 1, etc. As it stands it can be used for graphics. If data needs to be passed to the machine program, then Memory Size should be set to the appropriate number of bytes below the origin of the heading, the data poked into this "scratchpad" before calling USR(n), and program (n) then loads from the "scratchpad" as desired.

The first line of each program should bear the appropriate label - PRGO, PRG1, etc. It is, of course, imperative that no changes be made between CALL 2687 and JP PRGn.

Assembly language heading for multiple USR calls.

	ORG	nnnn
(LABELS)	EQU	(as desired)
	"	"
	CALL	2687
	XOR	A
	LD	B,3
DISPL	ADD	A,L
	DEC	B
	JP	NZ,DISPL
	LD	L,A
	LD	BC, \$ + 5
	ADD	HL, BC
	JP	(HL)
	JP	PRGO
	JP	PRG1
	JP	PRG2
	JP	PRGn

BRIDGE CHALLENGER

by Wynne Keller

This program lets the computer deal hands for you, or you may enter your own hands. You may then state your bid (looking at your own and the dummy hand), or you may ask to have the cards rotated such that the opponent's hand becomes yours, or you may pass to the next deal.

After your bid is made you play out of hand. When you are done you may play it again, with defense cards shuffled if you wish, to see if you can do better or can maintain your showing if the cards against you fall differently.

Interesting hands may be saved on tape, if desired. Also, hands may be dealt to meet your criteria for high card points, and saved on tape.

Initially I was disappointed because I wanted to be able to practice bidding as well as playing hands, and the program has

no provision for this. On reflection, though, it is probably just too complicated to fit in a 16K machine. It would have to be done in two separate programs, at least if the present features of BRIDGE CHALLENGER were to be retained.

This program is excellent practice for a bridge player to sharpen his or her game. It is not for some one who doesn't already know the rules. Certainly a computer would be a good way to teach novices — anyone out there inspired to write the software? I love bridge and get to play only about once a year because none of our friends know it. Of course, the computer is not as much fun as a foursome, but it does play a good game and is not a bad substitute. Occasionally it plays a card which I feel a "real" player wouldn't have used, but then "real" players do that too, myself included.

ATTENTION ALL WAR GAMERS

The war games you have come to love have
come to the TRS-80!

River
Hexagonal Grid
Terrain Obstacles
Armor, Infantry, and Engineers
Computer determined combat results

This Two Player game is an elementary war game (Kriegspiel is German for "war game") giving a battle between two countries located in opposite corners of the screen. The object is to capture the enemy capital. During play, each piece flashes in turn, displaying the number of moves left. You can move it, wait until you have moved other pieces, skip it, or even go directly to combat after moving only some of your pieces. You must stop and do battle whenever you are adjacent to an enemy piece. In battle, you can be eliminated, the other player can be eliminated, an exchange can take place, or a retreat may be required. You do the brainwork, General; the computer carries out your orders. Strategy and fate determine the battle!

ROUND the HORN

by George Blank

**RELIVE THE DAYS
OF WOODEN SHIPS AND
IRON MEN!**

This program simulates three clipper ships setting sail from New York on the same day in a race to San Francisco for prestige and profit. As the captain of one ship, you must find favorable winds and ocean currents allowing you to be the first to reach San Francisco. The passage around Cape Horn is dangerous; many a voyage has ended in tragedy there. Sailing through the doldrums ... well, let's not spoil all the suspense!

Written by the author of your Level I Users Manual, LEARNING LEVEL II picks right up where the Level I Manual leaves off. It also supplies the changes needed to make the Level I Manual compatible with your Level II TRS-80.

LEARNING LEVEL II covers all Level II BASIC beyond Level I, plus much more. It shows you how to use the Editor, explains what the many error messages are really saying, and leads you thru conversions of Level I programs to Level II.

Dual cassettes, printers, the Expansion Interface with clock and other features are explained in the same easy-to-learn style that made the Level I Manual famous. LEARNING LEVEL II was created specifically for your Level II TRS-80!

Yes, I want to really learn how to use Level II!

Please send _____ copies of
LEARNING LEVEL II. My check for \$15.95 +
\$1.45 P & H is enclosed.

I understand my order will be shipped
