

P1 is a 14 pin din plug
P2 is a 14 pin din plug
P3 is a 25 pin male D connector

ABOUT DUPLI-TWIX

What is it?

You will get a cable and a disk and an instruction sheet. One end of the cable plugs into the printer port on the back of your

ST. The second end plugs into the floppy drive port on the back

of your ST (or the output of your 1st drive in case of early

520's). The third end plugs into the input port of your second

ST drive. Yes, you MUST have a second drive for DupliTwix to work.

The software included (.PRG and .ACC versions) is very easy to use. Just indicate single or double sided disk and the copy

process from drive A: to drive B: begins immediately and takes

about 15 seconds for a single-sided disk or 30 for a double sided

disk. The program and idea come from

Germany, the Mecca of ST owners. The parts and labor come from Ohio, the Mecca of nothing that I know of.

What does it do?

It copies disks. Fast. Copy protection and all. It even copies

some disks that the Discovery cartridges have trouble with. Our

Discovery cart took 15 minutes and 40 tries to back up our

Populous disk. It took DupliTwix less than half a minute! Our

Discovery cart wouldn't back up our Batman disk at all. Dupli-

Twix did it in less time than it takes the ST to format a disk!
